### **Country report**

supporting the preparation of
The Second Report on the State of the World's Animal Genetic
Resources for Food and Agriculture,
including sector-specific data contributing to
The State of the World's Biodiversity for Food and Agriculture
- 2013 -

Country: Niue

### I. EXECUTIVE SUMMARY

Please provide an executive summary (not more than two pages) that will allow national and international stakeholders to gain a quick overview of the content of the country report. The executive summary should contain information on:

- key trends and driving forces affecting animal genetic resources management in your country;
- strengths, weaknesses and gaps in capacity to manage animal genetic resources in your country;
- key constraints and challenges with respect to animal genetic resources management in your country;
- priorities and strategic directions for future action (focusing particularly on the next ten years).

Niue animal genetics and its resources during the last 10 years (and beyond) have solely relied on local breeds of both pigs chickens known locally as Captain Cookers (believed to be Cpt James Cook introduced these animals into Niue). As a protein source for local consumptions as well as socioeconomic values. Pork and chickens are traditional diets of the local people, thus these were imported into the country when the demand is high. Traditional haircutting for virgin boys and ear piercing for girls were often sought large quantities of these livestock meats for its ceremonial celebrations of coming of age. There was a survey conducted on the genetics of Niuean chickens under auspices of the Secretariat of the Pacific Community (SPC) which at the time were conducted as part of the State of the Worlds Animal Genetic Resources and within the Pacific region. The SPC have available data's of the survey of the species and characteristics of Niue's chickens and their adaptability as compared to other regions in the Pacific. Local chickens were very preferable on any Niuean diet. Thus it competes with wild animals like feral dogs, feral cats, owls and sea herons that prey on little chicks. Thus, Niue was quite fortunate to the assistance of the FAO that emergency funds were made available to Niue as an emergency back up as a result of the Cyclone Heta that devastated Niue in 2004. There was a chicken permaculture scheme developed to 10 recipients on the island. This enables the development of chicken pens in a permaculture system, whereby, an inside shelter for penned chickens and an outside range for scratching and scavenging for the chickens when they are let out to scavenge. The system works very well as a few more farmers are adopting the system but to a smaller extent. Indigenous chickens are highly sought for this system of chicken production. The security of the chickens are also protected from wild animals and diseases by the provision of the fencing and housing, whereby the pens were subdivide to allow a small vegetable garden for the farmers utilizing manures etc.

There is only but one officer in charge of the program, and since he is now retiring from the tasks of Niue's state of animal genetic resources, there is one newly graduate who is slowly trained to assist with tasks of the national livestock husbandry. Niue is a small island and therefore relies very much imported foods and as much as 75% imported protein, ranges from frozen chickens, meats, pork and meat products. Pork and chickens were the two locally produced protein supplements available. There are but a few heads of tettered cattle only for weed clearing within bush areas or under coconuts, and these animals were kept mainly for such purposes and rarely slaughtered for consumption. Niue

agricultural sector still to look at semi-commercial farmers to assist as much as possibly can to produce local proteins. The production programme of the locally adapted chickens under the FAO/SPC animal genetics resources programme to setting up a breeding nucleus for these birds as a regional programme for pigs and chickens which Niue will host the production of indigenous chickens programme, whereby, local birds to be bred and distributed within the country.

### II. DATA FOR UPDATING THE PARTS AND SECTIONS OF THE STATE OF THE WORLD'S ANIMAL GENETIC RESOURCES FOR FOOD AND AGRICULTURE

Studios of gone flow in animal genetic resources have generally concluded that most gone flow

#### FLOWS OF ANIMAL GENETIC RESOURCES

breeds.

occurs either between developed countries or from developed countries to developing countries.  Does this correspond to the pattern of gene flow into and out of your country?
For developed countries, exceptions to the usual pattern would include significant imports of genetic resources from developing countries. For developing countries, exceptions would include significant exports of genetic resources to developed countries, and/or significant imports and/or exports of genetic resources to/from other developing countries.
<ul><li>yes</li></ul>
O no
yes but with some significant exceptions
1.1. If you answer "no" or "yes but with some significant exceptions", please provide further details. Please include information on: which species are exceptions and which regions of the world are the sources and/or destinations of the respective genetic material.
<ul><li>2. Have there been any significant changes in patterns of geneflow in and out of your country in the last ten years?</li><li>\( \) yes</li></ul>
<ul><li>no</li></ul>
<ul><li>2.1. If yes, please indicate whether this view is based on quantified data (e.g. import and export statistics collected by the government).</li><li>yes</li></ul>
○ no
2.2. If yes, please provide references (preferably including web links) (if relevant, indicate which types of animal genetic resources are covered).
2.3. Please also describe the changes, indicating the species involved, the direction of the changes, and the regions of the world to and from which the patterns of imports and exports have changed.
There are not much changes as Niue only imports chickens last 2 year to date. These are only layers and broiler

3. Please describe how the patterns of geneflow described under Questions 1 and 2 affect animal genetic resources and their management in your country.

chickens from NZ. Pigs were also imported from NZ during the last 10 years of the Large whites and Duroc crosses

Note: Please answer this question even if the pattern of geneflow into and out of your country corresponds to the "usual" pattern described in the first sentence of Question 1 and/or has not changed significantly in the last ten years.

Imported pigs were mated to local breeds and thus being distributed to most people on Niue to try and introduce into the local population of pork production growth gene traits for fast growth, higher litter sizes etc. Thus these were accepted by

the public in their production of these animals. Thus about 85% pigs on Niue are contaminated with imported breeds.

#### LIVESTOCK SECTOR TRENDS

4. Please indicate the extent to which the following trends or drivers of change have affected or are predicted to affect animal genetic resources and their management in your country and describe these effects.

Note: Relevant impacts on animal genetic resources and their management might include, for example, changes in the type of animal genetic resources kept (e.g. different breeds or species), changes in the uses to which animal genetic resources are put, changes in the geographical distribution of different types of animal genetic resources, increases or decreases in the number of breeds at risk of extinction, changes in the objectives of breeding programmes, changes in the number or type of conservation programmes being implemented, etc. In the text sections, please briefly describe the changes. If possible, provide some concrete examples of the challenges or opportunities presented by the respective drivers and the actions taken to address these challenges or opportunities. If relevant, you may also indicate why a given driver is not affecting animal genetic resources and their management in your country. For a general discussion of drivers of change, please see The State of the World's Animal Genetic Resources for Food and Agriculture

(Part 2, Section A) (http://www.fao.org/docrep/010/a1250e/a1250e00.htm).

(Part 2, Section A) (http://www.fao.org/doc			Describe the effects on ordered manatic massive
Drivers of change	Impact on animal genetic resources and their management over last ten years	Future impact on animal genetic resources and their management (predicted for the next ten years)	Describe the effects on animal genetic resources and their management
Changing demand for livestock products (quantity)	medium	low	Limited demand as families produces its own farm animals, unless they will purchase.
Changing demand for livestock products (quality)	low	low	Very low demand, therefore no great impact.
Changes in marketing infrastructure and access	none	none	Most families own livestock and very limited markets, thus, they produce their own livestock.
Changes in retailing	none	low	No great impact as Niue population is decreasing during the last 10 years.
Changes in international trade in animal products (imports)	low	low	No great impact, as Niue imports supplements if required, mostly on frozen meats.
Changes in international trade in animal products (exports)	none	none	No exports of animal and products to date, thus very little impact to animals resources.
Climatic changes	none	medium	In the form of extreme weather patterns, livestock keepers were informed of remedies to counter extreme weather patterns, by using water wisely. Livestock feeds were imported.
Degradation or improvement of grazing land	none	low	Niue only has pigs and chickens, plus 2 heads of cattle on tattering method.
Loss of, or loss of access to, grazing land and other natural resources	none	none	Niue only has pigs and chickens, plus 2 heads of cattle on tattering method.
Economic, livelihood or lifestyle factors affecting the popularity of livestock keeping	none	low	Traditional & cultural occasions often relied on pork and meat for protein sources, as of the haircutting & ear piercing ceremonies requires these traditional ceremonies. These often saw a lot of pork and chicken meats to be distributed to 100 plus families and friends in exchange for a sum of monetary donations towards the occasion.
Replacement of livestock functions	none	none	Public diet preferences are local produced meats to frozen, therefore, low impact to local animal resources and management as well as production.

Drivers of change	Impact on animal genetic resources and their management over last ten years	Future impact on animal genetic resources and their management (predicted for the next ten years)	Describe the effects on animal genetic resources and their management
Changing cultural roles of livestock	none	low	Traditional & cultural occasions often relied on pork and meat for protein sources, as of Niue's situation on culture, the haircutting & ear piercing ceremonies requires the mass feast preparations. These often saw a lot of pork, imported frozen meats and chickens, taros and bananas to be distributed according amount of money each families, friends donated to the occasion. Invitees to this traditional occasion of 150 plus families, friends, relatives in a days celebration.
Changes in technology	none	low	New & modernized technologies does not limit impacts on Animal resources.
Policy factors	none	low	Whichever policies, Niue would continue to conserve its livestock species etc.
Disease epidemics	low	high	If ever an endemic hits the island, it would wiped out the whole livestock population. Niue only one island (249 Square miles)

### **OVERVIEW OF ANIMAL GENETIC RESOURCES**

5. Please provide the number of locally adapted and exotic breeds kept in your country.

Data on the number of breeds is needed in order to calculate the percentage of breeds subject to the various management activities that are covered in this questionnaire. In line with the request of the Commission on Genetic Resources for Food and Agriculture at its Fourteenth Regular Session (CGRFA-14/13/Report, paragraph 31), FAO will implement the "locally adapted" vs. "exotic breed" classification system in the Domestic Animal Diversity Information System (DAD-IS). Once countries have fully updated their breed lists and classified all breeds in DAD-IS, it will be possible to use these data to obtain the numbers of breeds in each category.

Species	Locally adapted breeds	Exotic breeds
Cattle (specialized dairy)	0	0
Cattle (specialized beef)	0	0
Cattle (multipurpose)	0	1
Sheep	0	0
Goats	0	0
Pigs	2	4
Chickens	1	1

### **CHARACTERIZATION**

To provide further details of your country's activities in the field of characterization, surveying and monitoring, please go to Strategic Priority Area 1 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources 2007–2013" (below).

6. Please provide an overview of the current state of characterization in your country by indicating the extent to which the activities shown in the following table have been carried out.

Note: Please focus on characterization studies that have been conducted within the last ten years (baseline surveys of population size may have been conducted in the more distant past). Recall that some types of characterization study on your country's breeds may have been conducted outside your country. For the first two columns, please insert the number of breeds; for columns 3 to 8 please choose one of the following categories: none; low (approximately <33%); medium (approximately 33–67%); high (approximately >67%).

, , , , , , , , , , , , , , , , , , ,				, , , , , , , , , , , , , , , , , , ,		7	Ι,	
Species	Baseline survey of population size	Regular monitoring of population size	Phenotypic characterization	Molecular genetic diversity studies – within breed	Genetic diversity studies based on pedigree	Molecular genetic diversity studies – between breed	Genetic variance component estimation	Molecular genetic evaluation
Cattle (specialized dairy)	0	0	none	none	none	none	none	none
Cattle (specialized beef)	0	0	none	none	none	none	none	none
Cattle (multipurpose)	0	0	none	none	none	none	none	none
Sheep	0	0	none	none	none	none	none	none
Goats	0	0	none	none	none	none	none	none
Pigs	2	0	low	none	none	none	none	none
Chickens	1	1	low	none	none	none	none	none

### INSTITUTIONS AND STAKEHOLDERS

To provide further details of your country's activities in the field of institutions and stakeholders, please go to Strategic Priority Area 4 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources 2007–2013" (below).

7. Please indicate the state of your country's capacities and provisions in the following areas of animal genetic resources management.

	Score
Education	none
Research	none
Knowledge	low
Awareness	low
Infrastructure	none
Stakeholder participation	low
Policies	none

	Score
Policy implementation	none
Laws	none
Implementation of laws	low

8. Please provide further information regarding your country's capacities in each of the above-mentioned areas of management. If relevant, please indicate what obstacles or constraints your country faces in each of these areas and what needs to be done to address these constraints. You may also provide information on any particular successes achieved in your country in any of these areas and on the reasons for those successes.

areas and on the reaso	ns for these successes.
	Description
Education	Unskilled regarding animal genetics.
Research	Very limited personnel in the fields of animal production and animal health to undergo research works.
Knowledge	Very limited knowledge, especially the owners.
Awareness	Very little awareness programme as government Annual budgets for national Livestock operations and activities were not fully developed.
Infrastructure	The government piggery farm not fully developed for such purposes as originally programmed.
Stakeholder participation	A few managed to attend these few initial sessions as piggy back to other workshops.
Policies	Policy leads from public awareness and consultations. Therefore, low knowledge of policies to address animal genetic resources.
Policy implementation	No policies to date to be implemented.
Laws	Current laws doesn't address specific animal genetic resources which needs to be regulated.
Implementation of laws	No law to date to be implemented. Up-skilled capacities to address these priority areas.

9. What steps have been taken in your country to engage or empower the various stakeholders in animal genetic resources management (e.g. establishment of livestock keepers' organizations, development of biocultural community protocols)?

Note: Biocultural community protocol: a document that is developed after a community undertakes a consultative process to outline their core cultural and spiritual values and customary laws relating to their traditional knowledge and resources. For a discussion of the potential role of biocultural community protocols in the conservation of animal genetic resources, please see the guidelines In vivo conservation of animal genetic resources (http://www.fao.org/docrep/018/i3327e/i3327e.pdf).

To date, Niue hadn't developed any steps or measures to address these priority issues. Niue hadn't also identified specific capacity to follow for the benefit of the National animal genetic Resources and future plans.

#### **BREEDING PROGRAMMES**

Note: Breeding programmes: systematic and structured programmes for changing the genetic composition of a population towards a defined breeding goal (objective) to realize genetic gain (response to selection), based on objective performance criteria. Breeding programmes typically contain the following elements: definition of breeding goal; identification of animals; performance testing; estimation of breeding values; selection; mating; genetic gain and transfer of genetic gain. Breeding programmes are usually operated either by a group of livestock breeders organized in a breeders' association, community-based entity or other collective body; by a large commercial breeding company; or by the government.

To provide further details of your country's activities in the field of breeding programmes, please go to Strategic Priority Area 2 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources 2007–2013" (below).

### 10. Who operates breeding programmes in your country?

Note: the objective of this question is to identify which stakeholders lead or organize the breeding programmes that exist in your country. Stakeholder participation in the implementation of the various elements of breeding programmes is covered under Question 15. If you wish to provide further information on the activities of the various stakeholder groups (including collaborative activities on an

international	scala) nlas	sa nrovida	it in the	tavt saction	of Question 15.
IIII lerrialioriai s	scale), pied	se brovide	; 11 111 1116	LEXI SECTION	oi Question 15.

Species	Government	Livestock keepers organized at community level	Breeders' associations or cooperatives	National commercial companies	External commercial companies	Non-governmental organizations	Others
Cattle (specialized dairy)	no	no	no	no	no	no	no
Cattle (specialized beef)	no	no	no	no	no	no	no
Cattle (multipurpose)	no	no	no	no	no	no	no
Sheep	no	no	no	no	no	no	no
Goats	no	no	no	no	no	no	no
Pigs	yes	no	no	no	no	no	yes
Chickens	yes	no	no	no	no	no	yes

### 10.1. If you choose the option "others", please indicate what kind of operator(s) this refers to.

Animal owners or the Farmers themselves. Cooperatives, organisations and/or groups operating with animal genetics does not exists on Niue.

### 11. For how many breeds in your country are the following activities undertaken?

Note: Please do not include activities that are only undertaken for experimental purposes, i.e. include only activities that directly serve or involve livestock keepers. However, please include activities even if they do not at present form part of a breeding programme. The intention is to obtain an indication of whether the "building blocks" of a breeding programme are available or being developed in your country. Loc = Locally adapted breeds; Ex = Exotic breeds.

		Tools

Cattle (multipurpose)	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

12. Please indicate how many of the breeds in your country are subject to breeding programmes applying the following breeding methods.

Note: Loc = Locally adapted breeds; Ex = Exotic breeds.

	Breeding method								
Species	Straight/pure-breeding only  Straight/pure-breeding and cross-breeding								
	Loc	Ex	Loc	Ex					
Pigs	0	0	1	4					
Chickens	1	0	0	0					
Cattle (multipurpose)	0	0	0	0					

13. Please indicate the state of research and training in the field of animal breeding in your country.

Species	Training	Research
Cattle (specialized dairy)	none	none
Cattle (specialized beef)	none	none
Cattle (multipurpose)	none	none
Sheep	none	none
Goats	none	none
Pigs	none	none
Chickens	none	none

14. Please indicate the extent to which livestock keepers in your country are organized for the purposes of animal breeding.

Species	Organization of livestock keepers
Cattle (specialized dairy)	none
Cattle (specialized beef)	none
Cattle (multipurpose)	none
Sheep	none
Goats	none
Pigs	none
Chickens	none

## 15. Please indicate the level of stakeholder involvement in the various elements of breeding programmes in your country.

Note: If your country has different types of breeding programme, the level of involvement of the various stakeholders may vary from one type of programme to another. In answering this question please try to indicate the overall degree of involvement of the various

stakeholder groups.

Pigs	Government	Research organizations	Breeders' associations or cooperatives	Individual breeders/livestock keepers	National commercial companies	External commercial companies	Non-governmental organizations	Others

15.1.	If y	you choose ti	he option	"others",	please indicate	what kind of	f operator(s)	this refers to.
-------	------	---------------	-----------	-----------	-----------------	--------------	---------------	-----------------

15.2. Please provide further information on the roles that the stakeholders identified in the table play in the implementation of the various activities. If relevant, please also provide further information on the organizational roles played by the stakeholders identified in Question 10.

No organisations on any livestock activities on Niue.

16. Does your country implement any policies or programmes aimed at supporting breeding

programmes or influencing their objectives?

Species	Policies or programmes
Cattle (specialized dairy)	no
Cattle (specialized beef)	no
Cattle (multipurpose)	no
Sheep	no
Goats	no
Pigs	yes
Chickens	yes

16.1. Please describe these policies or programmes, indicating whether or not they include any measures specifically aimed at supporting breeding programmes for locally adapted breeds or any measures specifically aimed at supporting breeding programmes for exotic breeds (including breed-replacement programmes). Please indicate whether different types of programme are promoted in

different production systems (and describe the differences).

Species	Description of policies or programmes
Cattle (specialized dairy)	
Cattle (specialized beef)	
Cattle (multipurpose)	Only 2 heads of cattle to verify any significant importance.
Sheep	
Goats	
Pigs	Only recently (as of 2011) a few livestock oriented workshops where farmers were made aware on some of the values and benefits of Local adapted breeds versus Exotic breeds.
Chickens	Only recently (as of 2011) a few livestock oriented workshops where farmers were made aware on some of the values and benefits of Local adapted breeds versus Exotic breeds.

17. Please describe the consequences of your country's breeding policies and programmes, or lack of breeding policies and programmes, for your country's animal genetic resources and their

management.	
-------------	--

Species	Description of consequences
Cattle (specialized dairy)	
Cattle (specialized beef)	
Cattle (multipurpose)	
Sheep	
Goats	
Pigs	There would not be any consequences as breeding programmes were not regulated or developed as policies bonded to law as of today.

Species	Description of consequences
Chickens	There would not be any consequences as breeding programmes were not regulated or developed as policies bonded to law as of today.

18. Please describe the main constraints to the implementation of breeding programmes in your country and what needs to be done to address these constraints. You may also provide information on any particular successes achieved in your country with respect to the establishment and operation of breeding programmes and on the factors that have contributed to these successes.

As Niue is a small place and area, there is a need to regularly import new genes of pigs to boosted local production, as there is tendencies of inbreeding problems etc. Chickens are probably more simpler to breeding programmes as there is very low contaminations to the local population. This maybe due to very low import of chicken birds into the country.

19. Please describe future objectives, priorities and plans for the establishment or further

development of breeding programmes in your country.

GIGT GIG GILLIGITE GILLIG	orogrammes in your country.
Species	Description of future objectives, priorities and plans
Cattle (specialized dairy)	
Cattle (specialized beef)	
Cattle (multipurpose)	
Sheep	
Goats	
Pigs	As pig population on Niue is already contaminated by imported breeds of pigs, there is avenues to try to hold or conserve a few locally adapted breeds that are still around, thus, also to try and farm and breed from feral pigs.
Chickens	To import certain breeds of chickens that poses low risks of contaminations to local chickens and their breeding with locally adapted breeds on Niue, i.e. layers & broilers

### CONSERVATION

To provide further details of your country's activities in the field of conservation, please go to Strategic Priority Area 3 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources 2007–2013" (below).

20. Please provide an indication of the extent to which your country's breeds are covered by conservation programmes.

Please focus on at-risk breeds and breeds for which there are serious grounds for concern about their potential to fall into the at-risk category in the near future. Countries should not reduce their scores because of a lack of conservation programmes for breeds that are clearly not at risk. The main purpose of this question is to obtain an indication of the extent to which your country's conservation programmes meet the objective of protecting breeds from extinction. If your country has no official national criteria for classifying breed risk status or lacks the relevant data for identifying which breeds are at risk, please base your answers on estimations. Please also note that Question 8 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources – 2007 to 2013" (below) requests countries to provide information on the criteria they use to assess the risk status of animal genetic resources. Note: n/a = no programmes implemented because all breeds of this species present in the country are secure.

Species	In situ conservation	Ex situ in vivo conservation	Ex situ in vitro conservation
Cattle (specialized dairy)	none	none	none
Cattle (specialized beef)	none	none	none
Cattle (multipurpose)	none	none	none
Sheep	none	none	none
Goats	none	none	none
Pigs	low	none	none

Species	In situ conservation	Ex situ in vivo conservation	Ex situ in vitro conservation
Chickens	medium	none	none

<ol><li>Does your country use formal approaches to prioritize breeds for conservation</li></ol>	21.	Does your	country use	formal appr	oaches to p	rioritize breed	ds for conservation	on?
---	-----	-----------	-------------	-------------	-------------	-----------------	---------------------	-----

yes

no

### 21.1. If so, which of the following factors are considered?

Note: See Sections 2 and 3 of the FAO guidelines In vivo conservation of animal genetic resources (http://www.fao.org/docrep/018/

i3327e/i3327e.pdf).

<del>-</del>
Considered in formal prioritization approaches

### 22. Please indicate which of the following methods are used as elements of in situ conservation programmes in your country and which operators are managing them.

Note: Operators: the sector(s) that initiate(s) and manage(s) the respective activities. If both sectors undertake the respective activity, please answer "yes" in both rows. Please answer "yes" if the respective sector only works with some of the species targeted. If necessary, details of which sector addresses which species can be provided in the textual response. Information on what kinds of public- or private-sector organizations undertake the activities can also be provided, if necessary, in the textual response. Species targeted: Please answer "yes" if there are any such activities targeting the respective species, whether they are undertaken by the

public sector, private sector or both.

Operators / Species targeted	Promotion of niche marketing or other market differentiation	Community-based conservation programmes	Incentive or subsidy payment schemes for keeping at-risk breeds	Development of biocultural community protocols	Recognition/award programmes for breeders	Conservation breeding programmes	Selection programmes for increased production or productivity in at-risk breeds	Promotion of at-risk breeds as tourist attractions	Use of at-risk breeds in the management of wildlife habitats and landscapes	Promotion of breed-related cultural activities	Extension programmes to improve the management of at-risk breeds	Awareness-raising activities providing information on the potential of specific at-risk breeds

Isolated DNA	

25. If your country has an in vitro gene bank for animal genetic resources, please complete the following table.

Tollowing table.	Number of breeds for which material is stored	Number of breeds for which sufficient material is stored	Does the collection include material from not-at-risk breeds?	Have any extinct populations been reconstituted using material from the gene bank?	Have the gene bank collections been used to introduce genetic variability into an in situ population?	Have the gene bank collections been used to introduce genetic variability into an ex situ population?	Do livestock keepers or breeders' associations participate in the planning of the gene banking activities?
Species	_	2 8		100	T 7 :=	T 2 :=	
Cattle (specialized dairy)							
Cattle (specialized beef)							
Cattle (multipurpose)							
Sheep							
Goats							
Pigs							
Chickens							

25.1. Please provide further details of the activities recorded in the table (including any examples of
the use of gene bank material to reconstitute populations or introduce genetic variability) and any
other in vitro conservation activities or programmes being implemented in your country.

26.	Does :	your	country	have	plans	to	enter	into	collal	boration	with	other	countries	to	set	up a	a
regi	onal o	r sub	regiona	l in vi	tro ge	ne	bank	for a	nimal	genetic	reso	urces?					

yes

no

26.1. If yes, please describe the plans, including a list of the countries involved.

If current organisations (FAO, SPC, etc) are willing to set up gene banks for smaller island states, by all means it will be beneficial for small island states to tab into these organisations within our region.

27. If there have been any cases in your country in which breeds that were formerly classified as at
risk of extinction have recovered to a position in which they are no longer at risk, please list the
breeds and describe how the recovery was achieved.

#### REPRODUCTIVE AND MOLECULAR BIOTECHNOLOGIES

28. Please indicate the level of availability of reproductive and molecular biotechnologies for use in livestock production in your country.

Note: low = at experimental level only; medium = available to livestock keepers in some locations or production systems; high = widely

available to livestock keepers.

available to investock Reepers.	Biotechnologies												
Species	Artificial insemination	Embryo transfer	Multiple ovulation and embryo transfer	Semen sexing	In vitro fertilization	Cloning	Genetic modification	Molecular genetic or genomic information	Transplantation of gonadal tissue				
Pigs	none	none	none	none	none	none	none	low	none				
Chickens	none	none	none	none	none	none	none	none	none				

28.1.	Please	provide	additional	information	on the	use of tl	hese bio	technolo	gies in y	our coun	itry.
NIL		-									-

29. If the reproductive and/or molecular technologies are available for use by livestock keepers in your country, please indicate which stakeholders are involved in providing the respective services to the livestock keepers.

			Stakel	nolders		
	Public sector	Breeders' associations or cooperatives	National non-governmental organizations	Donors and development agencies	National commercial companies	External commercial companies
Artificial insemination	no	no	no	no	no	no
Embryo transfer	no	no	no	no	no	no

29.1. Please provide additional information on the roles that the providers identified in the table play in the provision of biotechnology services in your country.

30. Please indicate which biotechnologies your country is undertaking research on.

50. Flease maleate Willer Bleteer melegies j	our country is	dilaci takirig
Biotechnologies	Public or private research at national level	Research undertaken as part of international collaboration
Artificial insemination	no	no
Embryo transfer or MOET	no	no

Artificial insemination using nationally produced semen from exotic breeds	n/a	n/a	n/a	n/a	n/a
Artificial insemination using imported semen from exotic breeds	n/a	n/a	n/a	n/a	n/a
Natural mating	high	n/a	n/a	n/a	n/a

32. Please provide further details on the use of reproductive and molecular biotechnologies in animal genetic resources management in your country. Please note any particular constraints to implementing these activities and any problems associated with their use. Please indicate what needs to be done to address these constraints and/or problems. You may also provide information on any particular successes achieved in your country in the use of biotechnologies in animal genetic resources management and on the factors that have contributed to these successes.

III.	DATA CONTRIBUTING TO THE PREPARATION OF THE STATE OF THE
	WORLD'S BIODIVERSITY FOR FOOD AND AGRICULTURE

### ANIMAL GENETIC RESOURCES MANAGEMENT AND THE PROVISION OF REGULATING AND SUPPORTING ECOSYSTEM SERVICES

6. Do your country's policies, plans or strategies for animal genetic resources management include measures specifically addressing the roles of livestock in the provision of regulating ecosystem services and/or supporting ecosystem services?

Regulating ecosystem services: "Benefits obtained from the regulation of ecosystem processes" - Millennium Ecosystem Assessment. 2005. Ecosystems and human well-being: synthesis. Washington D.C., Island Press (available at http://millenniumassessment.org/ documents/document.356.aspx.pdf), page 40. Supporting ecosystem services: "Services necessary for the production of all other ecosystem services" - Millennium Ecosystem Assessment. 2005. Ecosystems and human well-being: synthesis. Washington D.C., Island Press (available at http://millenniumassessment.org/documents/document.356.aspx.pdf), page 40.

$\odot$	yes				
$\bigcirc$	no				

6.1. If yes, please describe these measures and indicate which supporting and/or regulating ecosystem services are targeted, and in which production systems.

Examples of supporting and regulatory ecosystem services provided by livestock might include the following: provision or maintenance of wildlife habitats (e.g. via grazing); seed dispersal (e.g. in dung or on animals' coats); promoting plant growth (e.g. stimulating growth via grazing or browsing); soil formation (e.g. via the supply of manure); soil nutrient cycling (e.g. via supply of manure); soil quality regulation (e.g. affecting soil structure and water-holding capacity via trampling or dunging); control of weeds and invasive species (e.g. via grazing or browsing invasive plants); climate regulation (e.g. by promoting carbon sequestration through dunging); enhancing pollination levels (e.g. by creating habitats for pollinators); fire control (e.g. by removal of biomass that may fuel fires); avalanche control (e.g. grazing to keep vegetation short to reduce the probability that snow will slide); erosion regulation (e.g. indirect via fire control services); maintenance of water quality and quantity (e.g. indirect effect via erosion control); management of crop residues (e.g. consumption of unwanted crop residues by animals); pest regulation (e.g. by destruction of pests or pest habitats); disease regulation (e.g. by destruction of disease vectors or their habitats); buffering of water quantities - flood regulation (e.g. indirect effect via fire and erosion control).

Niue imposes and regulates a law on Wandering Animals Control, which imposed to penned all domestic pigs. Any domesticated pigs found outside pens are referred to as feral, thus it should be put down. This is to prevent crop damages, damages to ecosystem and wild life habitats. Feral pig population on Niue has become a major pest whereby, very expensive to eradicate or controlling.

6.1.1 Please describe what the outcome of these measures has been in terms of the supply of the respective ecosystem services (including an indication of the scale on which these outcomes have been obtained).

As this is now law, people have opted to steer away from their norms of keeping pigs free range. There is better crop vield, less damage to wildlife habitats to date.

6.1.2 Please describe what the outcome of these measures has been in terms of the state of animal genetic resources and their management (including an indication of the scale on which these outcomes have been obtained).

Management of these resources have become better in ways of control, conservation of local breeds (not free breeding) and more animals.

7. Do your country's policies, plans or strategies for animal genetic resources management include measures specifically addressing environmental problems associated with livestock production?

g
Examples might include choosing to use particular species or breeds because they are less environmentally damaging in a given
ecosystem or adapting breeding goals to produce animals that have some characteristic that makes them more environmentally
friendly.
<ul><li>yes</li></ul>

7.1. If yes, please describe these measures and indicate the environmental problems that are targeted, and in which production systems.

 $\bigcirc$ no

(As indicated in Q6 above) Also a bounty award was offered to hunters who controlled feral pigs to be paid on pig tails presented to the Environment Department for proof. Wildlife habitats being destroyed.

7.1.1 Please describe what the outcome of these measures has been in terms of the reduction of the respective environmental problem (including an indication of the scale on which these outcomes have been obtained).

Very slow as there is but a large population of feral pigs in very remote areas.

7.1.2 Please describe what the outcome of these measures has been in terms of the state of animal genetic resources and their management (including an indication of the scale on which these outcomes have been obtained).

Quite good as people have penned their animals.

8. Please describe any constraints or problems encountered or foreseen in the implementation of measures in your country aimed at promoting the provision of regulating and supporting ecosystem services or reducing environmental problems.

Pigs are the major problem identified and only but a few people still letting their pigs outside their pens.

9. Please provide examples of cases in which the role of livestock or specific animal genetic resources is particularly important in the provision of regulating and/or supporting ecosystem services in your country. Please also describe any examples in which diverse animal genetic resources are important in terms of reducing the adverse environmental effects of livestock production.

A few heads of cattle on the rope under coconut trees adds manure for tree growth, controlling regrowth of weeds etc.

10. Please describe the potential steps that could be taken in your country to further expand or strengthen positive links between animal genetic resources management and the provision of regulating and/or supporting ecosystem services or the reduction of environmental problems. If your country has specific plans to take further action in this field, please describe them.

Import a few heads cattle, goats to control weeds etc

11. Please provide any further information on the links between animal genetic resources management in your country and the provision of supporting and/or regulating ecosystem services and/or the reduction of environmental problems.

Not much in Niue to date apart from the above questions.

### IV. PROGRESS REPORT ON THE IMPLEMENTATION OF THE GLOBAL PLAN OF ACTION FOR ANIMAL GENETIC RESOURCES – 2007 TO 2013

Note: Please provide further details in the text boxes below each question, including, if relevant, information on why no action has been taken.

STRATEGIC PRIORITY AREA 1: CHARACTERIZATION, INVENTORY AND MONITORING OF TRENDS AND ASSOCIATED RISKS

- The state of inventory and characterization of animal genetic resources
- The state of monitoring programmes and country-based early warning and response systems
- The state of international technical standards and protocols for characterization, inventory, and monitoring

its ani	lich of the following options best describes your country's progress in building an inventory of imal genetic resources covering all livestock species of economic importance (SP 1, Action 1)? y: An inventory is a complete list of all the different breeds present in a country.
$\bigcirc$	a. Completed before the adoption of the GPA
$\bigcirc$	b. Completed after the adoption of the GPA
$\bigcirc$	c. Partially completed (further progress since the adoption of the GPA)
•	d. Partially completed (no further progress since the adoption of the GPA)
Please	provide further details:
Any fu	nds or grants under these programmes to assist small island states in pursuing with their implementations etc.
chara	ich of the following options best describes your country's progress in implementing phenotypic cterization studies covering morphology, performance, location, production environments and ic features in all livestock species of economic importance (SP 1, Actions 1 and 2)?  a. Comprehensive studies were undertaken before the adoption of the GPA
$\bigcirc$	b. Sufficient information has been generated because of progress made since the adoption of the GPA
$\bigcirc$	c. Some information has been generated (further progress since the adoption of the GPA)
•	d. Some information has been generated (no further progress since the adoption of the GPA)
$\bigcirc$	e. None, but action is planned and funding identified
$\bigcirc$	f. None, but action is planned and funding is sought
$\circ$	g. None
Please	provide further details:
chara	ich of the following options best describes your country's progress in molecular cterization of its animal genetic resources covering all livestock species of economic tance (SP 1)?  a. Comprehensive studies were undertaken before the adoption of the GPA
	b. Sufficient information has been generated because of progress made since the adoption of the GPA
0	c. Some information has been generated (further progress since the adoption of the GPA)
•	d. Some information has been generated (no further progress since the adoption of the GPA)
	e. None, but action is planned and funding identified
0	· · · · · · · · · · · · · · · · · · ·
	f. None, but action is planned and funding is sought
0	g. None
Please	provide further details:

4. Has your country conducted a baseline survey of the population status of its animal genetic resources for all livestock species of economic importance (SP 1, Action 1)?
Glossary: A baseline provides a reference point for monitoring population trends. Population status refers to the total size of a national
breed population (ideally, also the proportion that is actively used for breeding and the number of male and female breeding animals).  a. Yes, a baseline survey was undertaken before the adoption of the GPA
b. Yes, a baseline survey has been undertaken or has commenced after the adoption of the GPA
c. Yes, a baseline survey has been undertaken for some species (coverage increased since the adoption of the GPA
d. Yes, a baseline survey has been undertaken for some species (coverage not increased since the adoption of the GPA
e. No, but action is planned and funding identified
f. No, but action is planned and funding is sought
g. No
Please provide further details:
5. Have institutional responsibilities for monitoring the status of animal genetic resources in your
country been established (SP 1, Action 3)?
Glossary: Monitoring is a systematic set of activities undertaken to document changes in the population size and structure of animal genetic resources over time.
a. Yes, responsibilities established before the adoption of the GPA
b. Yes, responsibilities established after the adoption of the GPA
C. No, but action is planned and funding identified
d. No, but action is planned and funding is sought
e. No
Please provide further details:
Trease provide further details.
6. Have protocols (details of schedules, objectives and methods) been established for a programme to monitor the status of animal genetic resources in your country (SP 2)?
a. Yes, protocols established before the adoption of the GPA
<ul> <li>b. Yes, protocols established after the adoption of the GPA</li> </ul>
C. No, but action is planned and funding identified
<ul> <li>d. No, but action is planned and funding is sought</li> </ul>
<ul><li>e. No</li></ul>
Please provide further details:
7. Are the population status and trends of your country's animal genetic resources being monitored regularly for all livestock species of economic importance (SP 1, Action 2)? <ul> <li>a. Yes, regular monitoring commenced before the adoption of the GPA</li> </ul>
O b. Yes, regular monitoring commenced after the adoption of the GPA
C. Yes, regular monitoring is being undertaken for some species (coverage increased since the adoption of the GPA
d. Yes, regular monitoring is being undertaken for some species (coverage not increased since the adoption of the GPA
e. No, but action is planned and funding identified

f. No, but action is planned and funding is sought
○ g. No
Please provide further details:
8. Which criteria does your country use for assessing the risk status of its animal genetic resources (SP 1, Action 7)?
Glossary: FAO has developed criteria that it uses to allocate breeds to risk-status categories based on the size and structure of their populations (http://www.fao.org/docrep/010/a1250e/a1250e00.htm).  • a. FAO criteria
○ b. National criteria that differ from the FAO criteria
C. Other criteria (e.g. defined by international body such as European Union)
C d. None
Please provide further details. If applicable, please describe (or provide a link to a web site that describes) your national criteria or those of the respective international body:
FAO have assisted with implementations of pigs and poultry emergency programme, Niue needs to establish these programmes and criterias.
9. Has your country established an operational emergency response system (http://www.fao.org/docrep/meeting/021/K3812e.pdf) that provides for immediate action to safeguard breeds at risk in all important livestock species (SP 1, Action 7)?  O a. Yes, a comprehensive system was established before the adoption of the GPA
O b. Yes, a comprehensive system has been established since the adoption of the GPA
C. For some species and breeds (coverage expanded since the adoption of the GPA)
O d. For some species and breeds (coverage not expanded since the adoption of the GPA)
C e. No, but action is planned and funding identified
○ f. No, but action is planned and funding is sought
Please provide further details:
10. Is your country conducting research to develop methods, technical standards or protocols for phenotypic or molecular characterization, or breed evaluation, valuation or comparison? (SP 2, Action 2)
a. Yes, research commenced before the adoption of the GPA
<ul> <li>b. Yes, research commenced after the adoption of the GPA</li> </ul>
C. No, but action is planned and funding identified
Od. No, but action is planned and funding is sought
● e. No
Please provide further details:

11. Has your country identified the major barriers and obstacles to enhancing its inventory, characterization and monitoring programmes?

○ a. Yes
<ul><li>b. No</li></ul>
c. No major barriers and obstacles exist. Comprehensive inventory, characterization and monitoring programmes
are in place.  Please provide further details. If barriers and obstacles have been identified, please list them:
12. If applicable, please list and describe the measures that need to be taken to address these barriers and obstacles and to enhance your country's inventory, characterization and monitoring programmes:
13. Please provide further comments on your country's activities related to Strategic Priority Area 1: Characterization, inventory and monitoring of trends and associated risks (including regional an international cooperation)
Note: It is not necessary to duplicate information provided in previous sections. Where relevant, please provide cross-references.
Pls see Q26.1
STRATEGIC PRIORITY AREA 2: SUSTAINABLE USE AND DEVELOPMENT
<ul> <li>The state of national sustainable use policies for animal genetic resources</li> </ul>
<ul> <li>The state of national species and breed development strategies and programmes</li> <li>The state of efforts to promote agro-ecosystem approaches</li> </ul>
<ul><li>14. Does your country have adequate national policies in place to promote the sustainable use of animal genetic resources (see also questions 46 and 54)?</li><li>a. Yes, since before the adoption of the GPA</li></ul>
<ul> <li>b. Yes, policies put in place or updated after the adoption of the GPA</li> </ul>
C. No, but action is planned and funding identified
<ul> <li>d. No, but action is planned and funding is sought</li> </ul>
● e. No
Please provide further details. If available, please provide the text of the policies or a web link to the text:
The current Animal Wandering Regulations does not govern or empower the animal genetic resources and sustainable use of animals. The regulation only protects domestic animals from becoming feral.
15. Do these policies address the integration of agro-ecosystem approaches into the management of animal genetic resources in your country (SP5) (see also questions 46 and 54)?  Glossary: The ecosystem approach is a strategy for the integrated management of land, water and living resources that promotes conservation and sustainable use in an equitable way (for further information see http://www.cbd.int/ecosystem/description.shtml).
<ul> <li>b. No, but a policy update is planned and funding identified</li> </ul>
C. No, but action is planned and funding is sought
<ul><li>d. No</li></ul>

Please provide further details:

16. Do breeding programmes exist in your country for all major species and breeds, and are these programmes regularly reviewed, and if necessary revised, with the aim of meeting foreseeable economic and social needs and market demands (SP4, Action 2)?  ○ a. Yes, since before the adoption of the GPA
<ul> <li>b. Yes, put in place after the adoption of the GPA</li> </ul>
c. For some species and breeds (coverage has increased since the adoption of the GPA)
<ul> <li>d. For some species and breeds (coverage has not increased since the adoption of the GPA)</li> </ul>
<ul> <li>e. No, but action is planned and funding identified</li> </ul>
f. No, but action is planned and funding is sought
○ g. No
Please provide further details:
Niue is very much into breeding programmes but not towards the conservation of animals.
17. Is long-term sustainable use planning – including, if appropriate, strategic breeding programmes – in place for all major livestock species and breeds (SP4, Action 1)?  a. Yes, since before the adoption of the GPA  b. Yes, put in place after the adoption of the GPA  c. For some species and breeds (further progress made since the adoption of the GPA)  d. For some species and breeds (no further progress made since the adoption of the GPA)  e. No, but action is planned and funding identified  f. No, but action is planned and funding is sought  g. No  Please provide further details:
<ul><li>18. Have the major barriers and obstacles to enhancing the sustainable use and development of animal genetic resources in your country been identified?</li><li>a. Yes</li></ul>
O b. No
c. No major barriers and obstacles exist. Comprehensive sustainable use and development measures are in place.
Please provide further details. If barriers and obstacles have been identified, please list them:
Short & Unskilled officers (Govt.), Feral pigs control, Funding's for awareness Animal Genetics campaign, Attitudes of old farmers,

19. Have the long-term impacts of the use of exotic breeds on locally adapted breeds (e.g. economic, environmental or genetic impacts) and on food security been assessed in your country (SP4, Action 1)?

### Glossary:

Exotic breeds are breeds that are maintained in a different area from the one in which they were developed. Exotic breeds comprise both recently introduced breeds and continually imported breeds.

Locally adapted breeds are breeds that have been in the country for a sufficient time to be genetically adapted to one or more of traditional production systems or environments in the country. The phrase "sufficient time" refers to time present in one or more of the country's traditional production systems or environments. Taking cultural, social and genetic aspects into account, a period of 40 years and six generations of the respective species might be considered as a guiding value for "sufficient time", subject to specific national circumstances.

and six generations of the respective species might be considered as a guiding value for "sufficient time", subject to specific national circumstances.	1/
c. Yes, assessments were introduced after the adoption of the GPA	
Please provide further details:	
The assessments on the status of Animal genetics of exotic breeds versus local breeds, phenotypically shows very go production traits.	od
20. Have recording systems and organizational structures for breeding programmes been established or strengthened (SP4, Action 3)?  a. Yes, sufficient recording systems and organizational structures for breeding programmes have existed since before the adoption of the GPA b. Yes, sufficient recording systems and organizational structures for breeding programmes exist because of programs made since the adoption of the GPA c. Yes, recording systems and organizational structures for breeding programmes are partially in place (and we established or strengthened after the adoption of the GPA) d. Yes, recording systems and organizational structures for breeding programmes are partially in place (but no programs has been made since the adoption of the GPA) e. No, but action is planned and funding identified  f. No, but action is planned and funding is sought  g. No  Please provide further details:	ere
These records are current Government farm procedures only.	
21. Are mechanisms in place in your country to facilitate interactions among stakeholders, scient disciplines and sectors as part of sustainable use development planning (SP5, Action 3)?  O a. Yes, comprehensive mechanisms have existed since before the adoption of the GPA	ific
b. Yes, comprehensive mechanisms exist because of progress made since the adoption of the GPA	
C. Yes, mechanisms are partially in place (and were established or strengthened after the adoption of the GPA	(۱
<ul> <li>d. Yes, mechanisms are partially in place (but no progress has been made since the adoption of the GPA)</li> <li>e. No, but action is planned and funding identified</li> </ul>	
f. No, but action is planned and funding is sought	
g. No  Places provide further detailer	
Please provide further details:	
22. Have measures been implemented in your country to provide farmers and livestock keepers with information that facilitates their access to animal genetic resources (SP 4, Action 7)?  • a. Yes, comprehensive measures have existed since before the adoption of the GPA	
<ul> <li>b. Yes, comprehensive measures exist because of progress made since the adoption of the GPA</li> </ul>	
c. Yes, measures partially implemented (and were established or strengthened after the adoption of the GPA)	
d. Yes, measures partially implemented (but no progress has been made since the adoption of the GPA)	

e. No, but action is planned and funding identified

$\bigcirc$	f. No, but action is planned and funding is sought
$\bigcirc$	g. No
Please	provide further details:
Breed	ing of imported breed to local pigs in upgrading local pig production and husbandry.
acces	as your country developed a national policy or entered specific contractual agreements for s to and the equitable sharing of benefits resulting from the use and development of animal ic resources and associated traditional knowledge (SP3, Action 2)?  a. Yes, sufficient measures (policy and/or agreements) have been in place since before the adoption of the GPA b. Yes, sufficient measures (policy and/or agreements) are in place because of progress made since the adoption of the GPA c. Yes, some measures (policy and/or agreements) are in place (progress has been made since the adoption of the GPA) d. Yes, some measures (policy and/or agreements) are in place (but no progress has been made since the adoption of the GPA) e. No, but a policy and/or agreements are in preparation
$\circ$	f. No, but a policy and/or agreements are planned

•	g. No
Please	provide further details:
	applicable, please list and describe priority requirements for enhancing the sustainable use evelopment of animal genetic resources in your country:
quite pi	liue is quite behind on the development of its SoWGR, it is sought that expertise visits to the island would be referable to allow proper trainings to local officers to implement its indigenous animal genetic resources. To plan areas and what could be the best way to achieve its goals. Niue is short staff and unskilled.
	ease provide further comments on your country's activities related to Strategic Priority Area tainable Use and Development (including regional and international cooperation)
	t is not necessary to duplicate information provided in previous sections. Where relevant, please ecross-references.
	one of the 4 small island states that awaits the implementation of its Indigenous Chicken conservation nme under SPC/FAO.
STRA	TEGIC PRIORITY AREA 3: CONSERVATION

- The state of national conservation policies
- The state of *in situ* and *ex situ* conservation programmes
- The state of regional and global long-term conservation strategies and agreement on technical standards for conservation

	pes your country regularly assess factors leading to the erosion of its animal genetic resources Action 2)?
(31-7,	a. Erosion not occurring
0	b. Yes, regular assessments have been implemented since before the adoption of the GPA
0	c. Yes, regular assessments have commenced since the adoption of the GPA
0	d. No, but action is planned and funding identified
0	e. No, but action is planned and funding is sought
•	f. No
Please	provide further details:
	hat factors or drivers are leading to the erosion of animal genetic resources? Please describe ctors specifying which breeds or species are affected:
	cal indigenous pig (Cpt Cookers) is believed to have slowly eroded due to imports of pigs from NZ as already within this reporting. Chickens are quite safe of the erosion problem as very little imports of chickens into Niue.
	pes your country have conservation policies and programmes in place to protect locally ed breeds at risk in all important livestock species (SP 7, SP 8 and SP 9)?
of traditi	y: Locally adapted breeds are breeds that have been in the country for a sufficient time to be genetically adapted to one or more ional production systems or environments in the country. The phrase "sufficient time" refers to time present in one or more of the is traditional production systems or environments. Taking cultural, social and genetic aspects into account, a period of 40 years generations of the respective species might be considered as a guiding value for "sufficient time", subject to specific national tances.
$\bigcirc$	a. Country requires no policies and programmes because all locally adapted breeds are secure
$\bigcirc$	b. Yes, comprehensive policies and programmes have been in place since before the adoption of the GPA
$\bigcirc$	c. Yes, comprehensive policies and programmes exist because of progress made since the adoption of the GPA
$\bigcirc$	d. For some species and breeds (coverage expanded since the adoption of the GPA)
•	e. For some species and breeds (coverage not expanded since the adoption of the GPA)
$\bigcirc$	f. No, but action is planned and funding identified
$\bigcirc$	g. No, but action is planned and funding is sought
$\bigcirc$	h. No
Please	provide further details:
	conservation policies and programmes are in place, are they regularly evaluated or reviewed Action 1; SP 8, Action 1; and SP 9, Action 1)?  a. Yes
$\circ$	b. No, but action is planned and funding identified
$\circ$	c. No, but action is planned and funding is sought
•	d. No
	provide further details:

of extinction and to prevent breeds from becoming at risk (SP 8 and SP 9)?	
Glossary: Locally adapted breeds are breeds that have been in the country for a sufficient time to be genetically adapted to one or of traditional production systems or environments in the country. The phrase "sufficient time" refers to time present in one or more country's traditional production systems or environments. Taking cultural, social and genetic aspects into account, a period of 40 yearnd six generations of the respective species might be considered as a guiding value for "sufficient time", subject to specific national circumstances.	of the ears
<ul> <li>a. Country requires no in situ conservation measures because all locally adapted breeds are secure</li> </ul>	
O b. Yes for all breeds	
<ul> <li>c. For some breeds (coverage expanded since the adoption of the GPA)</li> </ul>	
<ul> <li>d. For some breeds (coverage not expanded since the adoption of the GPA)</li> </ul>	
<ul> <li>e. No, but action is planned and funding identified</li> </ul>	
f. No, but action is planned and funding is sought	
○ g. No	
Please provide further details:	
35. Does your country have ex situ in vivo conservation measures in place for locally adapted breeds at risk of extinction and to prevent breeds from becoming at risk (SP 8 and SP 9)?	
Glossary: Ex situ in vivo conservation - maintenance of live animal populations not kept under their normal management conditions e.g. in zoological parks or governmental farms - and/or outside the area in which they evolved or are now normally found.  a. Country requires no ex situ in vivo conservation measures because all locally adapted breeds are secure	; -
O b. Yes for all breeds	
c. For some breeds (coverage expanded since the adoption of the GPA)	
d. For some breeds (coverage not expanded since the adoption of the GPA)	
e. No, but action is planned and funding identified	
f. No, but action is planned and funding is sought	
Please provide further details:	
36. Does your country have ex situ in vitro conservation measures in place for locally adapted breeds at risk of extinction and to prevent breeds from becoming at risk (SP 8 and SP 9)?	
Glossary: Ex situ in vitro - conservation, under cryogenic conditions including, inter alia, the cryoconservation of embryos, semen, oocytes, somatic cells or tissues having the potential to reconstitute live animals at a later date.  Calculate a locally adapted breeds are secure	
b. Yes for all breeds	
c. For some breeds (coverage expanded since the adoption of the GPA)	
d. For some breeds (coverage not expanded since the adoption of the GPA)	
e. No, but action is planned and funding identified	
f. No, but action is planned and funding is sought	
g. No  Please provide further details:	
Please provide further details:	

34. Does your country have in situ conservation measures in place for locally adapted breeds at risk

37. Please describe the measures (indicating for each whether they were introduced before or after the adoption of the GPA) or provide a web link to a published document that provides further information:
<ul> <li>38. If your country has not established any conservation programmes, is this a future priority?</li> <li>a. Yes</li> <li>b. No</li> </ul>
Please provide further details:
riease provide futitier details.
39. Has your country identified the major barriers and obstacles to enhancing the conservation of its animal genetic resources?
<ul><li>a. Country requires no conservation programmes because all animal genetic resources are secure</li><li>b. Yes</li></ul>
<ul><li>⊙ c. No</li></ul>
<ul> <li>d. No major barriers and obstacles exist. Comprehensive conservation programmes are in place</li> </ul>
Please provide further details. If barriers and obstacles have been identified, please list them:
40. If your country has existing ex situ collections of animal genetic resources, are there major gaps in these collections (SP 9, Action 5)?
<ul><li>b. No</li></ul>
If yes, have priorities for filling the gaps been established?
○ a. Yes
<ul> <li>b. No, but action is planned and funding identified</li> </ul>
c. No, but action is planned and funding is sought
○ d. No
Please provide further details:
41. Are arrangements in place in your country to protect breeds and populations that are at risk from natural or human-induced disasters (SPA 3)?
<ul> <li>a. Yes, arrangements have been in place since before the adoption of the GPA</li> </ul>
O b. Yes, arrangements put in place after the adoption of the GPA
C. No, but action is planned and funding identified
d. No, but action is planned and funding is sought
● e. No
Please provide further details:

42. Are arrangements in place in your country for extraction and use of conserved genetic material following loss of animal genetic resources (e.g. through disasters), including arrangements to enable restocking (SP 9, Action 3)?
<ul> <li>a. Yes, arrangements have been in place since before the adoption of the GPA</li> </ul>
<ul> <li>b. Yes, arrangements put in place after the adoption of the GPA</li> </ul>
C. No, but action is planned and funding identified
O d. No, but action is planned and funding is sought
● e. No
Please provide further details:
43. Is your country conducting research to adapt existing, or develop new, methods and technologies for in situ and ex situ conservation of animal genetic resources (SP 11, Action 1)?  a. Yes, research commenced before the adoption of the GPA
O b. Yes, research commenced since the adoption of the GPA
C. No, but action is planned and funding identified
<ul> <li>d. No, but action is planned and funding is sought</li> </ul>
● e. No
Please provide further details. If yes, please briefly describe the research:
44. Does your country implement programmes to promote documentation and dissemination of knowledge, technologies and best practices for conservation (SP 11, Action 2)?  © a. Yes, programmes commenced before the adoption of the GPA
b. Yes, programmes commenced since the adoption of the GPA
C. No, but action is planned and funding identified
d. No, but action is planned and funding is sought
e. No
Please provide further details:
I loade provide farities detaile.
45. What are your country's priority requirements for enhancing conservation measures for animal genetic resources? Please list and describe them:
Promote of local chickens at feasts for visitors to the island, by farming in permaculture system.
46. Please provide further comments describing your country's activities related to Strategic Priorit Area 3: Conservation (including regional and international cooperation)
Note: It is not necessary to duplicate information provided in previous sections. Where relevant, please provide cross-references.
As stated above, the conservation of local chickens in a permaculture system of production.

# STRATEGIC PRIORITY AREA 4: POLICIES, INSTITUTIONS AND CAPACITY-BUILDING IMPLEMENTATION AND FINANCING OF THE GLOBAL PLAN OF ACTION FOR ANIMAL GENETIC RESOURCES

- The state of national institutions for planning and implementing animal genetic resources measures
- The state of information sharing
- The state of educational and research facilities capacity for characterization, inventory, and monitoring, sustainable use, development, and conservation
- The state of awareness of the roles and values of animal genetic resources
- The state of policies and legal frameworks for animal genetic resources

	oes your country have sufficient institutional capacity to support holistic planning of the ock sector (SP 12, Action1)?
$\bigcirc$	a. Yes, sufficient capacity has been in place since before the adoption of the GPA
$\bigcirc$	b. Yes, sufficient capacity is in place because of progress made after the adoption of the GPA
$\bigcirc$	c. No, but action is planned and funding identified
$\bigcirc$	d. No, but action is planned and funding is sought
•	e. No
Please	provide further details:
No spe	ecialty field related to the Animal Genetics being trained, thus unskilled.
	hat is the current status of your country's national strategy and action plan for animal genetic rces (SP 20)?
governr actions,	y: National strategy and action plan for animal genetic resources: a strategy and plan, agreed by stakeholders and preferably ment-endorsed, that translates the internationally agreed Global Plan of Action for Animal Genetic Resources into national with the aim of ensuring a strategic and comprehensive approach to the sustainable use, development and conservation of genetic resources for food and agriculture.  a. Previously endorsed national strategy and action plan is being updated (or new version has been endorsed)
_	b. Completed and government-endorsed
0	c. Completed and agreed by stakeholders
0	d. In preparation
_	e. Preparation is planned and funding identified
0	•
•	f. Future priority activity
	g. Not planned provide further details. If available, please provide a copy of your country's national strategy and action plan as a te document or as a web link:
	re animal genetic resources addressed in your country's National Biodiversity Strategy and Plan (http://www.cbd.int/nbsap/)?  a. Yes
$\bigcirc$	b. No, but they will be addressed in forthcoming plan
•	c. No

Please provide further details:	
<ul><li>50. Are animal genetic resources addressed in your country's national livestock sector strategy, plan or policy (or equivalent instrument)?</li><li>a. Yes</li></ul>	
<ul> <li>b. No, but they will be addressed in a forthcoming strategy, plan or policy</li> </ul>	
C. No, animal genetic resources are not addressed	
d. No, the country does not have a national livestock sector strategy, plan or policy	
Please provide further details. If available, please provide the text of the strategy, plan or policy or a web link to the text:	
Some effort was to purchase and introduced into the government farm indigenous sire in line for breeding to other native breeds. Local sows were delivered to the Government farm for mating to native boars.	
51. Has your country established or strengthened a national database for animal genetic resources (independent from DAD-IS) (SP 15, Action 4)?	
<ul> <li>a. Yes, a national database has been in place since before the adoption of the GPA</li> </ul>	
<ul> <li>b. Yes, a national database is in place because of progress made since the adoption of the GPA</li> </ul>	
c. Yes, a national database is in place but still requires strengthening (progress since adoption of the GPA)	
d. Yes, a national database is in place but still requires strengthening (no progress since adoption of the GPA)	
<ul> <li>e. No, but action is planned and funding identified</li> </ul>	
C f. No, but action is planned and funding is sought	
● g. No	
Please provide further details:	
52. Have your country's national data on animal genetic resources been regularly updated in DAD-IS?	
Note that the Commission on Genetic Resources for Food and Agriculture has requested FAO to produce global status and trends reports every two years.	
<ul> <li>a. Yes, regular updates have been occurring since before the adoption of the GPA</li> </ul>	
<ul> <li>b. Yes, regular updates started after the adoption of the GPA</li> </ul>	
C. No, but it is a future priority	
<ul><li>d. No</li></ul>	
Please provide further details:	
Niue was unfortunate to attend the Fiji, DAD-IS trainings, thus find it difficult to these updates and passwords etc	
53. Has your country established a National Advisory Committee for Animal Genetic Resources (SP 12, Action 3)?	
<ul> <li>a. Yes, established before the adoption of the GPA</li> </ul>	
<ul> <li>b. Yes, established after the adoption of the GPA</li> </ul>	
C. No, but action is planned and funding identified	
d. No, but action is planned and funding is sought	
○ e. No	

Please p	provide further details. If a National Advisory Committee has been established, please list its main functions:
Have de	eliberated within the Agriculture Department but no actions finalised.
involve govern	there strong coordination and interaction between the National Focal Point and stakeholders ed with animal genetic resources, such as the breeding industry, livestock keepers, ment agencies, research institutes and civil society organizations (SP 12, Action 3)? a. Yes, strong coordination has been in place since before the adoption of the GPA
$\bigcirc$	b. Yes, strong coordination was established after the adoption of the GPA
$\circ$	c. No, but action is planned and funding identified
$\circ$	d. No, but action is planned and funding is sought
•	e. No
Please p	provide further details:
awarer	es the National Focal Point (or other institutions) undertake activities to increase public ness of the roles and values of animal genetic resources (SP 18)?  a. Yes, activities commenced before the adoption of the GPA
•	b. Yes, activities commenced after the adoption of the GPA
$\circ$	c. No, but activities are planned and funding identified
$\circ$	d. No, but activities are planned and funding is sought
$\circ$	e. No
Please p	provide further details:
Very lov	w means of awareness campaign which sometimes piggy back on some of the public consultations to raise ess.
manag	es your country have national policies and legal frameworks for animal genetic resources ement (SP 20)?  a. Yes, comprehensive national policies and legal frameworks were in place before the adoption of the GPA and are kept up to date b. Yes, comprehensive and up-to-date national policies and legal frameworks in place because of progress made since the adoption of the GPA c. Yes, some national policies and legislation in place (strengthened since the adoption of the GPA)  d. Yes, some national policies and legislation in place (not strengthened since the adoption of the GPA)  e. No, but action is planned and funding identified f. No, but action is planned and funding is sought g. No provide further details:
prograi develop	nich of the following options best describes the state of training and technology transfer mmes in your country related to inventory, characterization, monitoring, sustainable use, pment and conservation of animal genetic resources (SP14, Action 1)?  a. Comprehensive programmes have been in place since before the adoption of the GPA  b. Comprehensive programmes exist because of progress made since the adoption of the GPA  c. Some programmes exist (further progress since the adoption of the GPA)

$\circ$	d. Some programmes (no further progress since the adoption of the GPA)
$\bigcirc$	e. None, but action is planned and funding identified
$\bigcirc$	f. None, but action is planned and funding is sought
•	g. None
Please	provide further details:
	ave organizations (including where relevant community-based organizations), networks and ives for sustainable use, breeding and conservation been established or strengthened (SP 14, a 3)?
0	a. Yes, comprehensive organizations, networks and initiatives have existed since before the adoption of the GPA b. Yes, comprehensive organizations, networks and initiatives exist because of progress made since the adoption of the GPA
0	c. Yes, some organizations, networks and initiatives exist (established or strengthened since adoption of the GPA)
0	d. Yes, some organizations, networks and initiatives exist (but no progress made since adoption of the GPA)
0	e. No, but action is planned and funding identified
0	f. No, but action is planned and funding is sought
•	g. No
	provide further details:
Inere	is no NGO's on Animal Genetics existed in Niue.
	re there any national NGOs active in your country in the fields of:
Chara	acterization?
0	a. Yes
•	b. No
Susta	inable use and development?
0	c. Yes
•	d. No
Conse	ervation of breeds at risk?
$\circ$	e. Yes
•	f. No
If yes,	please list the national NGOs and provide links to their web sites:
	as your country established or strengthened research or educational institutions in the field of all genetic resources management (SP 13, Action 3)?  a. Yes, adequate research and education institutions have existed since before the adoption of the GPA
	b. Yes, adequate research and education institutions exist because of progress made since the adoption of the GPA
0	c. Yes, research and education institutions exist because of progress made since the adoption of the GPA d. Yes, research and education institutions exist but still require strengthening (progress made since the adoption of the GPA) d. Yes, research and education institutions exist but still require strengthening (no progress made since the
0	adoption of the GPA) e. No, but action is planned and funding identified
	f. No, but action is planned and funding is sought

● g. No					
Please provide further details:					
61. Please provide further comments describing your country's activities related to Strategic Priority Area 4: Policies, Institutions and Capacity-building (including regional and international cooperation)					
Note: It is not necessary to duplicate information provided in previous sections. Where relevant, please provide cross-references.					
IMPLEMENTATION AND FINANCING OF THE GLOBAL PLAN OF ACTION FOR ANIMAL GENETIC RESOURCES					
The state of international collaboration for planning and implementing animal genetic resources measures					
<ul> <li>The state of financial resources for the conservation, sustainable use and development of animal genetic resources</li> </ul>					
62. Has your country established or strengthened international collaboration in (SP 16):  Characterization?     a. Yes					
<ul> <li>b. No, but action is planned and funding identified</li> <li>c. No, but action is planned and funding is sought</li> <li>d. No</li> </ul>					
Sustainable use and development?  O e. Yes					
<ul><li>f. No, but action is planned and funding identified</li><li>g. No, but action is planned and funding is sought</li></ul>					
<ul><li>h. No</li><li>Conservation of breeds at risk?</li><li>i. Yes</li></ul>

<ul><li>I. No</li><li>Please provide further details:</li></ul>					
63. Are there any international NGOs active in your country in the fields of:  Characterization?  a. Yes  b. No					

Sustainable use and development?
O c. Yes
● d. No
Conservation of breeds at risk?
C e. Yes
<ul><li>f. No</li></ul>
If yes, please list the international NGOs:
64. Has national funding for animal genetic resources programmes increased since the adoption of the GPA?
C a. Yes
<ul><li>b. No</li></ul>
Please provide further details:
Normal budget for Livestock operation as passed from Governments budget.
65. Has your country received external funding for implementation of the GPA?  O a. Yes
O b. No
c. No, because country generally does not receive external funding
Please provide further details:
Niue would very much wants to link to outside donors to implement these programmes as well as work plans and ethics.
66. Has your country supported or participated in international research and education programmes assisting developing countries and countries with economies in transition to better manage animal genetic resources (SP 15 and 16)?
a. Yes, support or participation in place before the adoption of the GPA and strengthened since
<ul> <li>b. Yes, support or participation in place before the adoption of the GPA but not strengthened since</li> </ul>
C. Yes, support or participation in place since the adoption of the GPA
d. No, but action is planned and funding identified
e. No, but action is planned and funding is sought
<ul><li>f. No</li></ul>
Please provide further details:
67. Has your country supported or participated in programmes aimed at assisting developing countries and countries with economies in transition to obtain training and technologies and to build their information systems (SP 15 and 16)?
<ul> <li>a. Yes, support or participation commenced before the adoption of the GPA and strengthened since</li> </ul>
<ul> <li>b. Yes, support or participation commenced before the adoption of the GPA but not strengthened since</li> </ul>
C. Yes, support or participation commenced since the adoption of the GPA
Od. No, but action is planned and funding identified

68. Has your country provided funding to other countries for implementation of the Global Plan of Action?  6. a. Yes  6. b. No, but action is planned and funding is sought  6. c. No, but action is planned and funding is sought  6. d. No  6. e. No, because country is generally not a donor country  Please provide further details. If relevant, specify whether funding was bilateral or multilateral; research cooperation or aid; and to whom and for what it was given:  69. Has your country contributed to international cooperative inventory, characterization and monitoring activities involving countries sharing transboundary breeds and similar production systems (SP 1, Action 5)?  6. a. Yes  6. b. No, but action is planned and funding identified  6. c. No, but action is planned and funding is sought  6. d. No  Please provide further details:  70. Has your country contributed to establishing or strengthening global or regional information systems or networks related to inventory, monitoring and characterization of animal genetic resources (SP 1, Action 6)?  6. a. Yes  6. b. No, but action is planned and funding identified  6. c. No, but action is planned and funding is sought  6. d. No  Please provide further details:  71. Has your country contributed to the development of international technical standards and protocols for characterization, inventory and monitoring of animal genetic resources (SP2)?  72. a. Yes  73. b. No, but action is planned and funding identified  74. C. No, but action is planned and funding identified  75. C. No, but action is planned and funding identified  76. d. No  Please provide further details:	e. No, but action is planned and funding is sought						
68. Has your country provided funding to other countries for implementation of the Global Plan of Action?  a. Yes b. No, but action is planned and funding identified c. No, but action is planned and funding is sought d. No e. No, because country is generally not a donor country Please provide further details. If relevant, specify whether funding was bilateral or multilateral; research cooperation or aid; and to whom and for what it was given:  69. Has your country contributed to international cooperative inventory, characterization and monitoring activities involving countries sharing transboundary breeds and similar production systems (SP 1, Action 5)?  a. Yes b. No, but action is planned and funding identified c. No, but action is planned and funding is sought d. No Please provide further details:  70. Has your country contributed to establishing or strengthening global or regional information systems or networks related to inventory, monitoring and characterization of animal genetic resources (SP 1, Action 6)? a. Yes b. No, but action is planned and funding identified c. No, but action is planned and funding identified d. No Please provide further details:  71. Has your country contributed to the development of international technical standards and protocols for characterization, inventory and monitoring of animal genetic resources (SP2)? a. Yes b. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified c. No, but action is planned and funding identified	• f. No						
Action?  a. Yes  b. No, but action is planned and funding identified  c. No, but action is planned and funding is sought  d. No  e. No, because country is generally not a donor country  Please provide further details. It relevant, specify whether funding was bilateral or multilateral; research cooperation or aid; and to whom and for what it was given:  69. Has your country contributed to international cooperative inventory, characterization and monitoring activities involving countries sharing transboundary breeds and similar production systems (SP 1, Action 5)?  a. Yes  b. No, but action is planned and funding identified  c. No, but action is planned and funding is sought  d. No  Please provide further details:  70. Has your country contributed to establishing or strengthening global or regional information systems or networks related to inventory, monitoring and characterization of animal genetic resources (SP 1, Action 6)?  a. Yes  b. No, but action is planned and funding identified  c. No, but action is planned and funding identified  c. No, but action is planned and funding is sought  d. No  Please provide further details:  71. Has your country contributed to the development of international technical standards and protocols for characterization, inventory and monitoring of animal genetic resources (SP2)?  a. Yes  b. EMERGING ISSUES						
77. In view of the possibility that at some point countries may wish to update the GPA, please list any aspects of animal genetic resources management that are not addressed in the current GPA but will be important to address in the future (approximately the next ten years). Please also describe why these issues are important and indicate what needs to be done to address them.						
Issues to be addressed in future  Issues to be addressed Reasons Actions required						
in futi	ure (next ten vears)
