### **Country report**

supporting the preparation of

The Second Report on the State of the World's Animal Genetic
Resources for Food and Agriculture,
including sector-specific data contributing to

The State of the World's Biodiversity for Food and Agriculture

- 2013 -

Country: Iran (Islamic Republic of)

#### I. EXECUTIVE SUMMARY

Please provide an executive summary (not more than two pages) that will allow national and international stakeholders to gain a quick overview of the content of the country report. The executive summary should contain information on:

- key trends and driving forces affecting animal genetic resources management in your country;
- strengths, weaknesses and gaps in capacity to manage animal genetic resources in your country;
- key constraints and challenges with respect to animal genetic resources management in your country;
- priorities and strategic directions for future action (focusing particularly on the next ten years).

Geographically, Islamic Republic of Iran (I.R. of Iran) is located in West Asia and borders of the Oman Sea, Persian Gulf, and Caspian Sea. Its mountains have helped to shape different climate at the same time. The mountains enclose several broad basins, or plateaus, on which major agricultural and urban settlements are located.

In general, Iran has an arid climate in which most of the relatively scant annual precipitation falls from October through April. In most of the country, yearly precipitation averages 250 millimeters or less. The major exceptions are the higher mountain valleys of the Zagros and the Caspian coastal plain, where precipitation averages at least 500 millimeters annually. In the western part of the Caspian, rainfall exceeds 1,000 millimeters annually and is distributed relatively evenly throughout the year. This contrasts with some basins of the Central Plateau that receive 100 millimeters or less of precipitation annually.

Now a day the animal production sub sector play important rule in economy of country and has critical effect for supporting food. The population size of main economic spices of livestock show in table below:

The population size of main economic spices in Iran

	2010 (000)	2011 (000)
Purebreds cattle	1060	1112
Crossbred cattle	5006	5322
Native cattle	2522	2345
Buffalo	487	502
Sheep and lamb	51698	51336
Goat	25551	25372
Camel	155	156

According to the different climates several breeds of different animals have been generated which is mentioned in the 1st CR of I.R. of Iran.

These variety of species and breeds which are highly adapted to the mentioned conditions, deserve to have as much as possible attention in conservation and preservation.

Some essential activities have been adapted during the last decade. The main of these activities consist of approval of the parliament rules for supporting the AnGR and also providing infrastructure for conservation and management of AnGR. For implementation of the rules and legislation, financial support identified and annual budget has been sought. Because of broad spectrum of animal species and breeds more support is necessary.

Severe drought in recent years caused heavy pressure on rangeland and consequently on the range based livestock. This condition affected the AnGR in the country, especially in non-economical producing animals (some native breeds of sheep and goats).

Transboundry climatically and humanitarian factors caused many issues on the state of AnGR (specially Sistani cattle in the border of Hamoon Lake).

Import of exotic gene resources caused severe erosion on native breeds specially in cattle.

It is conclude that the implemented activities are not enough to be sure that the biodiversity would not decline and more serious arrangements and support is needed.

#### П. DATA FOR UPDATING THE PARTS AND SECTIONS OF THE STATE OF THE WORLD'S ANIMAL GENETIC RESOURCES FOR FOOD AND AGRICULTURE

Most effect is in cattle species, sheep.

FLOWS OF ANIMAL GENETIC RESOURCES
1. Studies of gene flow in animal genetic resources have generally concluded that most gene flow occurs either between developed countries or from developed countries to developing countries. Does this correspond to the pattern of gene flow into and out of your country?  For developed countries, exceptions to the usual pattern would include significant imports of genetic resources from developing countries. For developing countries, exceptions would include significant exports of genetic resources to developed countries, and/or significant imports and/or exports of genetic resources to/from other developing countries.  yes
O no
<ul> <li>yes but with some significant exceptions</li> </ul>
1.1. If you answer "no" or "yes but with some significant exceptions", please provide further details. Please include information on: which species are exceptions and which regions of the world are the sources and/or destinations of the respective genetic material.
Caspian Horse and some other native horses, Karakul sheep are two species that are exported from Iran to other countries.
<ul> <li>2. Have there been any significant changes in patterns of geneflow in and out of your country in the last ten years?</li> <li>yes</li> </ul>
O no
<ul> <li>2.1. If yes, please indicate whether this view is based on quantified data (e.g. import and export statistics collected by the government).</li> <li>yes</li> <li>no</li> </ul>
2.2. If yes, please provide references (preferably including web links) (if relevant, indicate which types of animal genetic resources are covered).

- 2.3. Please also describe the changes, indicating the species involved, the direction of the changes, and the regions of the world to and from which the patterns of imports and exports have changed. Crossbreeding Holstein cattle with Native cattle breeds also affected. Holstein mostly imported from Netherlands, England, Canada, Germany and USA.
- 3. Please describe how the patterns of geneflow described under Questions 1 and 2 affect animal genetic resources and their management in your country.

Note: Please answer this question even if the pattern of geneflow into and out of your country corresponds to the "usual" pattern described in the first sentence of Question 1 and/or has not changed significantly in the last ten years.

As a result of the crossbreeding with Holstein, the pattern of dairy cattle and gene flow goes toward the pattern of Holstein. This condition is caused the cattle breeding become more industrialized.

#### LIVESTOCK SECTOR TRENDS

4. Please indicate the extent to which the following trends or drivers of change have affected or are predicted to affect animal genetic resources and their management in your country and describe these effects.

Note: Relevant impacts on animal genetic resources and their management might include, for example, changes in the type of animal genetic resources kept (e.g. different breeds or species), changes in the uses to which animal genetic resources are put, changes in the geographical distribution of different types of animal genetic resources, increases or decreases in the number of breeds at risk of extinction, changes in the objectives of breeding programmes, changes in the number or type of conservation programmes being implemented, etc. In the text sections, please briefly describe the changes. If possible, provide some concrete examples of the challenges or opportunities presented by the respective drivers and the actions taken to address these challenges or opportunities. If relevant, you may also indicate why a given driver is not affecting animal genetic resources and their management in your country. For a general discussion of drivers of change, please see The State of the World's Animal Genetic Resources for Food and Agriculture

(Part 2, Section A) (http://www.fao.org/docrep/010/a1250e/a1250e00.htm). Describe the effects on animal genetic resources Impact on Drivers of change **Future** animal and their management impact on genetic animal resources and genetic their resources management and their over last ten management years (predicted for the next ten years) Changing demand for livestock Increasing the price of red meat is more than products (quantity) medium increasing income therefore some part of this high needs exchange with chicken meat. Changing demand for livestock medium low products (quality) Changes in marketing medium medium infrastructure and access Changes in retailing low medium Changes in international trade in medium medium animal products (imports) Changes in international trade in low medium animal products (exports) Climatic changes The rain fall decrease during last three decades high high and it has harmful effect on pasture especially in sheep and goat breeding. Degradation or improvement of In the sheep and goat many of rang lands grazing land degraded as result of increasing the agricultural high high lands, area of cities and long term drought periods during last three decades.

Drivers of change	Impact on animal genetic resources and their management over last ten years	Future impact on animal genetic resources and their management (predicted for the next ten years)	Describe the effects on animal genetic resources and their management
Loss of, or loss of access to, grazing land and other natural resources	medium	medium	The main grazing area of Systani caw in east of Iran loss as a result of constrain big dam on Hamoun river by Afghanistan and dry the wet lands and the lake of Hamoun that was the main grazing area for this breed.
Economic, livelihood or lifestyle factors affecting the popularity of livestock keeping	high	medium	The population of Murkhoz breed goat in west part of Iran and the Bactrian camel decease sharply as result of changing in lifestyle of people.
Replacement of livestock functions	low	low	Bactrian camel mostly used for draught in nomad societies in west part of Iran but in recent years it is replaced by mechanical power.
Changing cultural roles of livestock	medium	low	
Changes in technology	high	high	
Policy factors	high	high	The long term policy of Government for bringing out the livestock from jungles and account the capacity of grazing goat five time more than sheep in pastures my have effect on the number of this species in the long term.
Disease epidemics	none	low	

#### **OVERVIEW OF ANIMAL GENETIC RESOURCES**

5. Please provide the number of locally adapted and exotic breeds kept in your country.

Data on the number of breeds is needed in order to calculate the percentage of breeds subject to the various management activities that are covered in this questionnaire. In line with the request of the Commission on Genetic Resources for Food and Agriculture at its Fourteenth Regular Session (CGRFA-14/13/Report, paragraph 31), FAO will implement the "locally adapted" vs. "exotic breed" classification system in the Domestic Animal Diversity Information System (DAD-IS). Once countries have fully updated their breed lists and classified all breeds in DAD-IS, it will be possible to use these data to obtain the numbers of breeds in each category.

Species	Locally adapted breeds	Exotic breeds
Cattle (specialized dairy)	5	1
Cattle (specialized beef)	2	0
Cattle (multipurpose)	2	2
Sheep	28	1
Goats	8	3
Pigs	0	0
Chickens	9	5
Horses	6	10
Turkeys	3	1
Buffaloes	3	1

Species	Locally adapted breeds	Exotic breeds
Bactrian camels	1	0
Dromedaries	5	0

#### **CHARACTERIZATION**

To provide further details of your country's activities in the field of characterization, surveying and monitoring, please go to Strategic Priority Area 1 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources 2007–2013" (below).

6. Please provide an overview of the current state of characterization in your country by indicating the extent to which the activities shown in the following table have been carried out.

Note: Please focus on characterization studies that have been conducted within the last ten years (baseline surveys of population size may have been conducted in the more distant past). Recall that some types of characterization study on your country's breeds may have been conducted outside your country. For the first two columns, please insert the number of breeds; for columns 3 to 8 please choose one of the following categories: none; low (approximately <33%); medium (approximately 33–67%); high (approximately >67%).

Species	Baseline survey of population size	Regular monitoring of population size	Phenotypic characterization	Molecular genetic diversity studies – within breed	Genetic diversity studies based on pedigree	Molecular genetic diversity studies – between breed	Genetic variance component estimation	Molecular genetic evaluation	
Cattle (specialized dairy)	5	3	high	medium	low	low	high	none	
Cattle (specialized beef)	2	1	high	low	none	low	medium	none	
Cattle (multipurpose)	0	0	none	none	none	none	none	none	
Sheep	28	1	high	low	low	low	low	none	
Goats	8	2	high	medium	low	medium	medium	none	
Pigs	0	0	none	none	none	none	none	none	
Chickens	9	1	high	low	low	low	medium	none	
Horses	3	0	medium	medium	low	medium	low	none	
Bactrian camels	1	1	medium	medium	medium	medium	medium	none	

#### INSTITUTIONS AND STAKEHOLDERS

To provide further details of your country's activities in the field of institutions and stakeholders, please go to Strategic Priority Area 4 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources 2007–2013" (below).

7. Please indicate the state of your country's capacities and provisions in the following areas of animal genetic resources management.

	Score
Education	low
Research	medium
Knowledge	medium
Awareness	medium
Infrastructure	medium
Stakeholder participation	low
Policies	medium
Policy implementation	low
Laws	high
Implementation of laws	medium

8. Please provide further information regarding your country's capacities in each of the above-mentioned areas of management. If relevant, please indicate what obstacles or constraints your country faces in each of these areas and what needs to be done to address these constraints. You may also provide information on any particular successes achieved in your country in any of these

areas and on the reasons for these successes.

	Description
Education	The Education in university level is good but in Individual farmers is not sufficient.
Research	In research Institutes and University many research is conducted by Researchers and higher Education students.
Knowledge	There is sufficient knowledge in different aspect of Identification, Conservation and Development of AnGR.
Awareness	There is relatively good awareness about the value of AnGR in Governmental sector and Parliamentarians bodies.
Infrastructure	There are many station and relatively good genebank for storage of semen, Embryo and sufficient expert people.
Stakeholder participation	There is good participation of stakeholders especially in Horse, Chicken and Bactrian Camel.
Policies	There are roles and policies in national level for AnGR Identification, Conservation and development
Policy implementation	There is annual budgetary for AnGR Identification, Conservation and development
Laws	There are laws for Identification and Conservation.
Implementation of laws	For some species it is good e.g. in chicken.

9. What steps have been taken in your country to engage or empower the various stakeholders in animal genetic resources management (e.g. establishment of livestock keepers' organizations, development of biocultural community protocols)?

Note: Biocultural community protocol: a document that is developed after a community undertakes a consultative process to outline their core cultural and spiritual values and customary laws relating to their traditional knowledge and resources. For a discussion of the potential role of biocultural community protocols in the conservation of animal genetic resources, please see the guidelines In vivo conservation of animal genetic resources (http://www.fao.org/docrep/018/i3327e/i3327e.pdf).

There are organizations for Caspian, Torkman and Arab Horse, Native chicken, Camel and Bufallo.

#### **BREEDING PROGRAMMES**

Note: Breeding programmes: systematic and structured programmes for changing the genetic composition of a population towards a defined breeding goal (objective) to realize genetic gain (response to selection), based on objective performance criteria. Breeding programmes typically contain the following elements: definition of breeding goal; identification of animals; performance testing; estimation of breeding values; selection; mating; genetic gain and transfer of genetic gain. Breeding programmes are usually operated either by a group of livestock breeders organized in a breeders' association, community-based entity or other collective body; by a large commercial breeding company; or by the government.

To provide further details of your country's activities in the field of breeding programmes, please go to Strategic Priority Area 2 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources 2007–2013" (below).

#### 10. Who operates breeding programmes in your country?

Note: the objective of this question is to identify which stakeholders lead or organize the breeding programmes that exist in your country. Stakeholder participation in the implementation of the various elements of breeding programmes is covered under Question 15. If you wish to provide further information on the activities of the various stakeholder groups (including collaborative activities on an

international scale), please provide it in the text section of Question 15.

		-				-		

### 11. For how many breeds in your country are the following activities undertaken?

Note: Please do not include activities that are only undertaken for experimental purposes, i.e. include only activities that directly serve or involve livestock keepers. However, please include activities even if they do not at present form part of a breeding programme. The intention is to obtain an indication of whether the "building blocks" of a breeding programme are available or being developed in your country. Loc = Locally adapted breeds; Ex = Exotic breeds.

		Tools														
Species	Animal identification		Breeding goal defined		Dorformanco recordina	D	Dodiano roomdina		Opposite of position (along of particular)	Genetic evaluation (classic approach)	Genetic evaluation including genomic	information	Management of genetic variation (by	maximizing enective population size of minimizing rate of inbreeding)	∆rtificial insemination

Turkeys	3	2	1	1		
Dromedaries	5	1	5	1		
Cattle (specialized beef)	1	0	1	0		

13. Please indicate the state of research and training in the field of animal breeding in your country.

Species	Training	Research
Cattle (specialized dairy)	high	high
Cattle (specialized beef)	none	none
Cattle (multipurpose)	medium	medium
Sheep	medium	high
Goats	medium	medium
Pigs	none	none
Chickens	high	high
Bactrian camels	low	medium
Dromedaries	low	medium
Buffaloes	medium	medium
Horses	high	medium
Quails	medium	medium
Turkeys	low	low

14. Please indicate the extent to which livestock keepers in your country are organized for the

purposes of animal breeding.

Species	Organization of livestock keepers
Cattle (specialized dairy)	high
Cattle (specialized beef)	none
Cattle (multipurpose)	low
Sheep	medium
Goats	low

Species	Organization of livestock keepers
Pigs	none
Chickens	low
Bactrian camels	low
Buffaloes	medium
Dromedaries	low
Horses	high
Quails	medium
Turkeys	low

# 15. Please indicate the level of stakeholder involvement in the various elements of breeding programmes in your country.

Note: If your country has different types of breeding programme, the level of involvement of the various stakeholders may vary from one type of programme to another. In answering this question please try to indicate the overall degree of involvement of the various stakeholder groups.

15.1. If you choose the option "others", please indicate what kind of operator(s) this refers to.

15.2. Please provide further information on the roles that the stakeholders identified in the table play in the implementation of the various activities. If relevant, please also provide further information on the organizational roles played by the stakeholders identified in Question 10.

16. Does your country implement any policies or programmes aimed at supporting breeding programmes or influencing their objectives?

Policies or programmes Species Cattle (specialized dairy) yes Cattle (specialized beef) no Cattle (multipurpose) yes Sheep ves Goats yes Pigs no Chickens yes Horses yes Bactrian camels yes Dromedaries yes Buffaloes yes

16.1. Please describe these policies or programmes, indicating whether or not they include any measures specifically aimed at supporting breeding programmes for locally adapted breeds or any measures specifically aimed at supporting breeding programmes for exotic breeds (including breed-replacement programmes). Please indicate whether different types of programme are promoted in different production systems (and describe the differences).

aniforcint production syste	cins (and describe the differences).
Species	Description of policies or programmes
Cattle (specialized dairy)	For this specie mostly aim for sustainable development of milk and fat production both quantitative and qualitative
Cattle (specialized beef)	In Sistani and Taleshi breeds the aim is Conservation by adapted in new region which has enough feeds and relatively same weather condition.
Cattle (multipurpose)	The policy for this specie is crossbreeding between exotic breeds or locally adapted breeds with Native breeds for access to more production of milk and meat.
Sheep	Improvement of meat, milk and fiber by selection method but recently two exotic breeds also introduced for cross breed with native sheep to access higher percent of twining to improve meat production.
Goats	In Markhoz and Raeeiny Breeds, the policy is conservation and for other breeds improvement of milk and meat production. Recently some exotic breeds are imported for better production of milk.
Pigs	There is no use at all.
Chickens	Development of meat, egg, age at sexual maturity and egg weight by selection of inside breeds, the policy is to prevent crossbreeding between native and exotic birds.
Horses	Conservation and Identification of traits and provide the back of of Caspian horse in different regions.
Bactrian camels	Increasing the population, Embryo transfer, Gene bank for keeping sperm and embryo. There is not any selection program in this species because the number of population
Buffaloes	Identification and improvement of the milk production, keeping the semen and use the semen of external breeds for improve the production of milk and production of organic milk.
Dromedaries	Identification and conservation, Improvement of meat production and provided the organic meat.

17. Please describe the consequences of your country's breeding policies and programmes, or lack of breeding policies and programmes, for your country's animal genetic resources and their management.

Species	Description of consequences
Cattle (specialized dairy)	Improvement of milk production and reduction of genetic diversity and native breeds especially Golpaiegany breed located in risk condition.
Cattle (specialized beef)	By taking the back up from Sisstany breeds, there is hope it expanded in new situation.
Cattle (multipurpose)	Improvement of meat and milk production and decreasing the genetic diversity in native cattle.
Sheep	Improvement of meat production and conservation of genetic resources.
Goats	Improvement of meat production and conservation of genetic resources.
Pigs	
Chickens	Improvement of meat and egg production and conservation of genetic resources.
Buffaloes	Improvement of milk production and conservation of genetic resources.
Horses	Prevent from decreasing the population number.

Species	Description of consequences
Dromedaries	Prevent from decreasing the population number and improvement of meat and milk production.
Bactrian camels	Prevent from decreasing the population number and develop productivity.

18. Please describe the main constraints to the implementation of breeding programmes in your country and what needs to be done to address these constraints. You may also provide information on any particular successes achieved in your country with respect to the establishment and operation of breeding programmes and on the factors that have contributed to these successes.

Not enough budget, Not enough awareness in farmers, Not enough income from the production of native species, changing in market for production and needs for more meet, milk and egg

19. Please describe future objectives, priorities and plans for the establishment or further

development of breeding programmes in your country.

	programmes in your country.
Species	Description of future objectives, priorities and plans
Cattle (specialized dairy)	Continuing the crossbreeding program for improvement of milk production.
Cattle (specialized beef)	More attention to those native breeds could produced meet in harsh condition
Cattle (multipurpose)	Improvement of milk and meat production by using the genetic potential of exotic breeds.
Sheep	Improvement of milk and meat production by using the genetic potential of native breeds.
Goats	Improvement of milk and meat production by using the genetic potential of native breeds.
Pigs	
Chickens	Improvement of egg and meat production by using the genetic potential of native breeds.
Buffaloes	More attention to those native breeds could produced milk in harsh condition.
Bactrian camels	Increasing the population by embryo transfer, artificial insemination either with same breed or with dromedaries.
Dromedaries	Improvement of productivity and production in drought area.
Horses	Improvement the ability to increase performance and endurance races and support the development and improvement of working horses and sport horses.

#### **CONSERVATION**

To provide further details of your country's activities in the field of conservation, please go to Strategic Priority Area 3 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources 2007–2013" (below).

20. Please provide an indication of the extent to which your country's breeds are covered by conservation programmes.

Please focus on at-risk breeds and breeds for which there are serious grounds for concern about their potential to fall into the at-risk category in the near future. Countries should not reduce their scores because of a lack of conservation programmes for breeds that are clearly not at risk. The main purpose of this question is to obtain an indication of the extent to which your country's conservation programmes meet the objective of protecting breeds from extinction. If your country has no official national criteria for classifying breed risk status or lacks the relevant data for identifying which breeds are at risk, please base your answers on estimations. Please also note that Question 8 of the "Progress report on the implementation of the Global Plan of Action for Animal Genetic Resources – 2007 to 2013" (below) requests countries to provide information on the criteria they use to assess the risk status of animal genetic resources. Note: n/a = no programmes implemented because all breeds of this species present in the country are secure.

Species	In situ conservation	Ex situ in vivo conservation	Ex situ in vitro conservation
Cattle (specialized dairy)	low	medium	medium
Cattle (specialized beef)	medium	medium	medium

Species	In situ conservation	Ex situ in vivo conservation	Ex situ in vitro conservation

	21.	Does v	our country	use formal	approaches to	prioritize	breeds for	conservation?
--	-----	--------	-------------	------------	---------------	------------	------------	---------------

	yes
$\bigcirc$	no

#### 21.1. If so, which of the following factors are considered?

Note: See Sections 2 and 3 of the FAO guidelines In vivo conservation of animal genetic resources (http://www.fao.org/docrep/018/i3327e/i3327e.pdf).

	Considered in formal prioritization approaches
Risk of extinction	yes
Genetic uniqueness	yes
Genetic variation within the breed	yes
Production traits	yes
Non-production traits	yes
Cultural or historical importance	yes
Probability of success	yes

# 22. Please indicate which of the following methods are used as elements of in situ conservation programmes in your country and which operators are managing them.

Note: Operators: the sector(s) that initiate(s) and manage(s) the respective activities. If both sectors undertake the respective activity, please answer "yes" in both rows. Please answer "yes" if the respective sector only works with some of the species targeted. If necessary, details of which sector addresses which species can be provided in the textual response. Information on what kinds of public- or private-sector organizations undertake the activities can also be provided, if necessary, in the textual response. Species targeted: Please answer "yes" if there are any such activities targeting the respective species, whether they are undertaken by the public sector, private sector or both.

Operators / Species targeted	Promotion of niche marketing or other market differentiation	Community-based conservation programmes	Incentive or subsidy payment schemes for keeping at-risk breeds	Development of biocultural community protocols	Recognition/award programmes for breeders	Conservation breeding programmes	Selection programmes for increased production or productivity in at-risk breeds	Promotion of at-risk breeds as tourist attractions	Use of at-risk breeds in the management of wildlife habitats and landscapes	Promotion of breed-related cultural activities	Extension programmes to improve the management of at-risk breeds	Awareness-raising activities providing information on the potential of specific at-risk breeds
Public sector	yes	yes	yes	no	yes	yes	no	no	yes	yes	yes	yes
Private sector	no	yes	no	no	yes	yes	no	no	no	yes	no	yes

22.1. Please provide further details of the activities recorded in the table and any other in situ
conservation activities or programmes being implemented in your country.

23. Does your country have an operational in vitro gene bank for animal genetic resources?
In vitro gene bank: a collection of documented cryoconserved genetic material, primarily stored for the purpose of medium- to long-term
conservation, with agreed protocols and procedures for acquisition and use of the genetic material.
(a) VAS

O no

23.1. If your country has no in vitro gene bank for animal genetic resources, does it have plans to develop one?

$\odot$	yes
---------	-----

O no

23.2. If yes, please describe the plans.

The legislation is under approval. There is a problem with enough budget.

24. If your country has an in vitro gene bank for animal genetic resources, please indicate what kind of material is stored there.

KING OF Material is stored there.	
	Stored in national genebank
Semen	yes
Embryos	yes
Oocytes	yes
Somatic cells (tissue or cultured cells)	no
Isolated DNA	yes

25. If your country has an in vitro gene bank for animal genetic resources, please complete the

following table.

Species	Number of breeds for which material is stored	Number of breeds for which sufficient material is stored	Does the collection include material from not-at-risk breeds?	Have any extinct populations been reconstituted using material from the gene bank?	Have the gene bank collections been used to introduce genetic variability into an in situ population?	Have the gene bank collections been used to introduce genetic variability into an ex situ population?	Do livestock keepers or breeders' associations participate in the planning of the gene banking activities?
Cattle (specialized dairy)	4	2	yes	no	yes	yes	yes
Cattle (specialized beef)	2	1	yes	no	yes	yes	no

Horses	low	low	low	low	low	low	low	medium	none

28.1. Please provide additional information on the use of these biotechnologies in your country. There is sufficient potential of skilled expert and somehow up to date equipments.

<sup>29.</sup> If the reproductive and/or molecular technologies are available for use by livestock keepers in your country, please indicate which stakeholders are involved in providing the respective services to the livestock keepers.

			Staker	nolders		
	Public sector	Breeders' associations or cooperatives	National non-governmental organizations	Donors and development agencies	National commercial companies	External commercial companies
Artificial insemination	yes	yes	yes	yes	yes	yes
Embryo transfer	yes	yes	yes	yes	yes	yes

29.1. Please provide additional information on the roles that the providers identified in the table play in the provision of biotechnology services in your country.

30. Please indicate which biotechnologies your country is undertaking research on.

Biotechnologies	Public or private research at national level	Research undertaken as part of international collaboration
Artificial insemination	yes	no
Embryo transfer or MOET	yes	no
Semen sexing	yes	no
In vitro fertilization	yes	no
Cloning	yes	no
Genetic modification	yes	no
Use of molecular genetic or genomic information for estimation of genetic diversity	yes	no
Use of molecular genetic or genomic information for prediction of breeding values	yes	yes
Research on adaptedness based on molecular genetic or genomic information	yes	no

30.1. Please briefly describe the research.

There exist enough capacity of research in biotechnology in different research Institutes and universities.

31. Please estimate the extent to which artificial insemination (using semen from exotic and/or locally adapted breeds) and/or natural mating is used in your country's various production systems. Note: low = approximately < 33% of matings; medium = approximately 33-67% of matings; high = approximately > 67% of mating; n/a = production system not present in this country.

32. Please provide further details on the use of reproductive and molecular biotechnologies in animal genetic resources management in your country. Please note any particular constraints to implementing these activities and any problems associated with their use. Please indicate what needs to be done to address these constraints and/or problems. You may also provide information on any particular successes achieved in your country in the use of biotechnologies in animal genetic resources management and on the factors that have contributed to these successes.

### III. DATA CONTRIBUTING TO THE PREPARATION OF THE STATE OF THE WORLD'S BIODIVERSITY FOR FOOD AND AGRICULTURE

### INTEGRATION OF THE MANAGEMENT OF ANIMAL GENETIC RESOURCES WITH THE MANAGEMENT OF PLANT, FORESTRY AND AQUATIC GENETIC RESOURCES

1. Please indicate the extent to which the management of animal genetic resources in your country is integrated with the management of plant, forestry and aquatic genetic resources. Please describe the collaboration, including, if relevant, a description of the benefits gained by pursuing a collaborative approach.

	Extent of	Description
	collaboration	
Development of joint national strategies or action plans	limited	There are several long term plan for cultivating forage to cover the need of animal resources.
Collaboration in the characterization, surveying or monitoring of genetic resources, production environments or ecosystems	limited	Assigned the capacity of the pasture for grazing of livestock.
Collaboration related to genetic improvement	limited	There is a legislation for productivity improvement.

	Extent of	Description
	collaboration	
Collaboration related to product development and/or marketing	none	
Collaboration in conservation strategies, programmes or projects	none	
Collaboration in awareness-raising on the roles and values of genetic resources	none	
Training activities and/or educational curricula that address genetic resources in an integrated manner	none	
Collaboration in the mobilization of resources for the management of genetic resources	none	
2. Please describe any other types of colla		
there are some projects in collaboration animal prorange production.	duction and a	quaculture and also animal production with plant and
3. If relevant, please describe the benefits the management of genetic resources in t country. If specific plans to increase collabbenefits foreseen	he animal, p	
The aim of most plans were strengthening the cond	dition of forest	and range land.
4. Please describe any factors that facilitate management of genetic resources in your	country.	
The difference between view-points of experts in c	different agricu	ltural sub-sectors.
5. If there are constraints, please indicate	what needs	s to be done to overcome them.
It needs providing legislation and negotiation and o	of course some	common workshops.

7.1.1 Please describe what the outcome of these measures has been in terms of the red the respective environmental problem (including an indication of the scale on which thes have been obtained).  Not measured yet.	
Not measured yet.	
7.1.2 Please describe what the outcome of these measures has been in terms of the star genetic resources and their management (including an indication of the scale on which toutcomes have been obtained).	
Very few effects.	
8. Please describe any constraints or problems encountered or foreseen in the implemer measures in your country aimed at promoting the provision of regulating and supporting services or reducing environmental problems.	
Lack of a comprehensive strategic plans regarding AnGR and ecosystems.	

Examples of supporting and regulatory ecosystem services provided by livestock might include the following: provision or maintenance

9. Please provide examples of cases in which the role of livestock or specific animal genetic resources is particularly important in the provision of regulating and/or supporting ecosystem services in your country. Please also describe any examples in which diverse animal genetic resources are important in terms of reducing the adverse environmental effects of livestock production.
Relationship between sheep breeding and maintenance of mountainous rangelands.     Role of camel breeding in rehabilitation of deserts and halophyte plants.
10. Please describe the potential steps that could be taken in your country to further expand or strengthen positive links between animal genetic resources management and the provision of regulating and/or supporting ecosystem services or the reduction of environmental problems. If your country has specific plans to take further action in this field, please describe them.  1. Provide legislation and comprehensive executive plans for collaboration between sectors related this field.  2. Provide relevant budget for above mentioned executive plans.
11. Please provide any further information on the links between animal genetic resources management in your country and the provision of supporting and/or regulating ecosystem services and/or the reduction of environmental problems.
IV. PROGRESS REPORT ON THE IMPLEMENTATION OF THE GLOBAL PLAN OF ACTION FOR ANIMAL GENETIC RESOURCES – 2007 TO 2013
Note: Please provide further details in the text boxes below each question, including, if relevant, information on why no action has been taken.
STRATEGIC PRIORITY AREA 1: CHARACTERIZATION, INVENTORY AND MONITORING OF TRENDS AND ASSOCIATED RISKS
<ul> <li>The state of inventory and characterization of animal genetic resources</li> <li>The state of monitoring programmes and country-based early warning and response systems</li> <li>The state of international technical standards and protocols for characterization, inventory, and monitoring</li> </ul>
1. Which of the following options best describes your country's progress in building an inventory of its animal genetic resources covering all livestock species of economic importance (SP 1, Action 1)? Glossary: An inventory is a complete list of all the different breeds present in a country.
a. Completed before the adoption of the GPA
O b. Completed after the adoption of the GPA
c. Partially completed (further progress since the adoption of the GPA)
<ul> <li>d. Partially completed (no further progress since the adoption of the GPA)</li> </ul>
Please provide further details:

2. Which of the following options best describes your country's progress in implementing phenotypic characterization studies covering morphology, performance, location, production environments and specific features in all livestock species of economic importance (SP 1, Actions 1 and 2)?

$\bigcirc$	a. Comprehensive studies were undertaken before the adoption of the GPA
$\bigcirc$	b. Sufficient information has been generated because of progress made since the adoption of the GPA
•	c. Some information has been generated (further progress since the adoption of the GPA)
$\circ$	d. Some information has been generated (no further progress since the adoption of the GPA)
$\circ$	e. None, but action is planned and funding identified
$\circ$	f. None, but action is planned and funding is sought
$\circ$	g. None
Please	provide further details:
For ca	attle, sheep, poultry, goat, buffalo and camel are partly down.
chara	nich of the following options best describes your country's progress in molecular cterization of its animal genetic resources covering all livestock species of economic tance (SP 1)?
$\circ$	a. Comprehensive studies were undertaken before the adoption of the GPA
$\circ$	b. Sufficient information has been generated because of progress made since the adoption of the GPA
•	c. Some information has been generated (further progress since the adoption of the GPA)
$\bigcirc$	d. Some information has been generated (no further progress since the adoption of the GPA)
$\circ$	e. None, but action is planned and funding identified
$\circ$	f. None, but action is planned and funding is sought
$\circ$	g. None
Please	provide further details:
2. Imp	olving participation of international Hapmaps in projects for buffalo, horse, sheep, goat.  elementation of molecular marker in genetic diversity in all of breeds.  e of cloning and embryo transfer in cattle, camel, buffalo, sheep and goat.
resou	s your country conducted a baseline survey of the population status of its animal genetic irces for all livestock species of economic importance (SP 1, Action 1)?
	ry: A baseline provides a reference point for monitoring population trends. Population status refers to the total size of a national population (ideally, also the proportion that is actively used for breeding and the number of male and female breeding animals).  a. Yes, a baseline survey was undertaken before the adoption of the GPA
$\bigcirc$	b. Yes, a baseline survey has been undertaken or has commenced after the adoption of the GPA
•	c. Yes, a baseline survey has been undertaken for some species (coverage increased since the adoption of the GPA
$\bigcirc$	d. Yes, a baseline survey has been undertaken for some species (coverage not increased since the adoption of the GPA
$\circ$	e. No, but action is planned and funding identified
$\circ$	f. No, but action is planned and funding is sought
$\bigcirc$	g. No
Please	provide further details:
Turkm	nan horse and native chicken.
count Glossa	ve institutional responsibilities for monitoring the status of animal genetic resources in your cry been established (SP 1, Action 3)?  The status of animal genetic resources in your gry. Monitoring is a systematic set of activities undertaken to document changes in the population size and structure of animal resources over time.

a. Yes, responsibilities established before the adoption of the GPA

$\odot$	b. Yes, responsibilities established after the adoption of the GPA		
$\bigcirc$	c. No, but action is planned and funding identified		
$\bigcirc$	d. No, but action is planned and funding is sought		
$\bigcirc$	e. No		
Please	provide further details:		
There	There is a rule approved in 2009 which is under execution now.		
	ve protocols (details of schedules, objectives and methods) been established for a programme onitor the status of animal genetic resources in your country (SP 2)?  a. Yes, protocols established before the adoption of the GPA		
•	b. Yes, protocols established after the adoption of the GPA		
0	c. No, but action is planned and funding identified		
0	d. No, but action is planned and funding is sought		
0	e. No		
	provide further details:		
	rotocol is approved and it is under execution now.		
	e the population status and trends of your country's animal genetic resources being monitored arly for all livestock species of economic importance (SP 1, Action 2)?  a. Yes, regular monitoring commenced before the adoption of the GPA  b. Yes, regular monitoring commenced after the adoption of the GPA  c. Yes, regular monitoring is being undertaken for some species (coverage increased since the adoption of the GPA)  d. Yes, regular monitoring is being undertaken for some species (coverage not increased since the adoption of the GPA)		
0	e. No, but action is planned and funding identified		
$\circ$	f. No, but action is planned and funding is sought		
$\circ$	g. No		
Please	provide further details:		
Bactria	an camel and Caspian horse.		
(SP 1 Glossal populat	nich criteria does your country use for assessing the risk status of its animal genetic resources, Action 7)?  ny: FAO has developed criteria that it uses to allocate breeds to risk-status categories based on the size and structure of their tions (http://www.fao.org/docrep/010/a1250e/a1250e00.htm).  a. FAO criteria  b. National criteria that differ from the FAO criteria  c. Other criteria (e.g. defined by international body such as European Union)  d. None  provide further details. If applicable, please describe (or provide a link to a web site that describes) your national or those of the respective international body:		
Sincina	or those of the respective international body.		

9. Has your country established an operational emergency response system (http://www.fao.org/docrep/meeting/021/K3812e.pdf) that provides for immediate action to safeguard breeds at risk in				
all important livestock species (SP 1, Action 7)?				
a. Yes, a comprehensive system was established before the adoption of the GPA				
b. Yes, a comprehensive system has been established since the adoption of the GPA				
c. For some species and breeds (coverage expanded since the adoption of the GPA)				
<ul> <li>d. For some species and breeds (coverage not expanded since the adoption of the GPA)</li> </ul>				
e. No, but action is planned and funding identified				
f. No, but action is planned and funding is sought				
● g. No				
Please provide further details:				
10. Is your country conducting research to develop methods, technical standards or protocols for phenotypic or molecular characterization, or breed evaluation, valuation or comparison? (SP 2, Action 2)				
<ul> <li>a. Yes, research commenced before the adoption of the GPA</li> </ul>				
<ul> <li>b. Yes, research commenced after the adoption of the GPA</li> </ul>				
C. No, but action is planned and funding identified				
<ul> <li>d. No, but action is planned and funding is sought</li> </ul>				
○ e. No				
Please provide further details:				
<ul> <li>11. Has your country identified the major barriers and obstacles to enhancing its inventory, characterization and monitoring programmes?</li> <li>a. Yes</li> <li>b. No</li> </ul>				
c. No major barriers and obstacles exist. Comprehensive inventory, characterization and monitoring programmes				
are in place. Please provide further details. If barriers and obstacles have been identified, please list them:				
There is not enough budget and not developed infrastructure.				
12. If applicable, please list and describe the measures that need to be taken to address these barriers and obstacles and to enhance your country's inventory, characterization and monitoring programmes:				
13. Please provide further comments on your country's activities related to Strategic Priority Area 1: Characterization, inventory and monitoring of trends and associated risks (including regional and international cooperation)				

Note: It is not necessary to duplicate information provided in previous sections. Where relevant, please

Establishment of factories for processing camel and buffalo milk and argot production with the aim of providing new

provide cross-references.

market.
STRATEGIC PRIORITY AREA 2: SUSTAINABLE USE AND DEVELOPMENT
<ul> <li>The state of national sustainable use policies for animal genetic resources</li> <li>The state of national species and breed development strategies and programmes</li> <li>The state of efforts to promote agro-ecosystem approaches</li> </ul>
<ul><li>14. Does your country have adequate national policies in place to promote the sustainable use of animal genetic resources (see also questions 46 and 54)?</li><li>a. Yes, since before the adoption of the GPA</li></ul>
<ul> <li>b. Yes, policies put in place or updated after the adoption of the GPA</li> </ul>
C. No, but action is planned and funding identified
Od. No, but action is planned and funding is sought
○ e. No
Please provide further details. If available, please provide the text of the policies or a web link to the text:
There is a regulation that is assigned by parliament.
15. Do these policies address the integration of agro-ecosystem approaches into the management of animal genetic resources in your country (SP5) (see also questions 46 and 54)?  Glossary: The ecosystem approach is a strategy for the integrated management of land, water and living resources that promotes conservation and sustainable use in an equitable way (for further information see http://www.cbd.int/ecosystem/description.shtml).  a. Yes
b. No, but a policy update is planned and funding identified
c. No, but action is planned and funding is sought
C d. No
Please provide further details:
There is a parliament approved law for productivity enhancement in agriculture and natural resources.
<ul> <li>16. Do breeding programmes exist in your country for all major species and breeds, and are these programmes regularly reviewed, and if necessary revised, with the aim of meeting foreseeable economic and social needs and market demands (SP4, Action 2)?</li> <li>a. Yes, since before the adoption of the GPA</li> </ul>
O b. Yes, put in place after the adoption of the GPA
C. For some species and breeds (coverage has increased since the adoption of the GPA)
<ul> <li>d. For some species and breeds (coverage has not increased since the adoption of the GPA)</li> </ul>
<ul> <li>e. No, but action is planned and funding identified</li> </ul>
○ f. No, but action is planned and funding is sought
○ g. No
Please provide further details:
A dairy cattle and native chicken, sheep, goat and buffalo.

a. Yes, since before the adoption of the GPA b. Yes, put in place after the adoption of the GPA c. For some species and breeds (further progress made since the adoption of the GPA) d. 	lave priorities for future technical training and support programmes to enhance the use and lopment of animal genetic resources in your country been identified (SP 4, paragraph 42)?  a. Yes, priorities have been identified or updated since the adoption of the GPA		
$\circ$	b. Yes, priorities were identified before the adaption of the GPA but have not been updated		
$\circ$	c. No, but action is planned and funding identified		
$\circ$	d. No, but action is planned and funding is sought		
$\circ$	e. No		
Please	e provide further details:		
syste	lave efforts been made in your country to assess and support indigenous or local production ems and associated traditional knowledge and practices related to animal genetic resources (SI tion 1, 2)?  a. Yes, sufficient measures have been in place since before the adoption of the GPA		
$\circ$	b. Yes, sufficient measures are in place because of progress made since the adoption of the GPA		
•	c. Yes, some measures are in place (and were established or strengthened after the adoption of the GPA)		
$\circ$	d. Yes, some measures are in place (but no progress has been made since the adoption of the GPA)		
$\circ$	e. No, but action is planned and funding identified		
$\circ$	f. No, but action is planned and funding is sought		
$\circ$	g. No		
Please	e provide further details:		
It is a	pplicable to some species.		
	lave efforts been made in your country to promote products derived from indigenous and loca es and locally adapted breeds, and facilitate access to markets (SP 6, Action 2, 4)?  a. Yes, sufficient measures have been in place since before the adoption of the GPA		
0	b. Yes, sufficient measures are in place because of progress made since the adoption of the GPA		
•	c. Yes, some measures are in place (and were established or strengthened after the adoption of the GPA)		
$\circ$	d. Yes, some measures are in place (but no progress has been made since the adoption of the GPA)		

<ul> <li>e. No, but action is planned and funding identified</li> </ul>
C f. No, but action is planned and funding is sought
○ g. No
Please provide further details:
It is applied to some species.
28. If applicable, please list and describe priority requirements for enhancing the sustainable use and development of animal genetic resources in your country:
Complementation of characterization, identification and registration of AnGR.
<ul><li>29. Please provide further comments on your country's activities related to Strategic Priority Area</li><li>2: Sustainable Use and Development (including regional and international cooperation)</li></ul>
Note: It is not necessary to duplicate information provided in previous sections. Where relevant, please provide cross-references.
STRATEGIC PRIORITY AREA 3: CONSERVATION
<ul> <li>The state of national conservation policies</li> <li>The state of <i>in situ</i> and <i>ex situ</i> conservation programmes</li> <li>The state of regional and global long-term conservation strategies and agreement on technical standards for conservation</li> </ul>
30. Does your country regularly assess factors leading to the erosion of its animal genetic resources (SP 7, Action 2)?
<ul> <li>b. Yes, regular assessments have been implemented since before the adoption of the GPA</li> </ul>
C. Yes, regular assessments have commenced since the adoption of the GPA
O d. No, but action is planned and funding identified
e. No, but action is planned and funding is sought
C f. No
Please provide further details:
31. What factors or drivers are leading to the erosion of animal genetic resources? Please describe the factors specifying which breeds or species are affected:
Crossbreeding, longterm drought, reduction economic importance, degradation of range lands.

32. Does your country have conservation policies and programmes in place to protect locally adapted breeds at risk in all important livestock species (SP 7, SP 8 and SP 9)?

	generations of the respective species might be considered as a guiding value for "sufficient time", subject to specific national
O	a. Country requires no policies and programmes because all locally adapted breeds are secure
$\circ$	b. Yes, comprehensive policies and programmes have been in place since before the adoption of the GPA
$\circ$	c. Yes, comprehensive policies and programmes exist because of progress made since the adoption of the GPA
•	d. For some species and breeds (coverage expanded since the adoption of the GPA)
$\circ$	e. For some species and breeds (coverage not expanded since the adoption of the GPA)
$\circ$	f. No, but action is planned and funding identified
$\circ$	g. No, but action is planned and funding is sought
$\circ$	h. No
Please	provide further details:
	conservation policies and programmes are in place, are they regularly evaluated or reviewed, Action 1; SP 8, Action 1; and SP 9, Action 1)?  a. Yes
$\bigcirc$	b. No, but action is planned and funding identified
•	c. No, but action is planned and funding is sought
$\bigcirc$	d. No
Please	provide further details:
of ext Glossal of tradit country	oes your country have in situ conservation measures in place for locally adapted breeds at risk inction and to prevent breeds from becoming at risk (SP 8 and SP 9)?  The sy: Locally adapted breeds are breeds that have been in the country for a sufficient time to be genetically adapted to one or more tional production systems or environments in the country. The phrase "sufficient time" refers to time present in one or more of the straditional production systems or environments. Taking cultural, social and genetic aspects into account, a period of 40 years generations of the respective species might be considered as a guiding value for "sufficient time", subject to specific national stances.
$\bigcirc$	a. Country requires no in situ conservation measures because all locally adapted breeds are secure
$\circ$	b. Yes for all breeds
•	c. For some breeds (coverage expanded since the adoption of the GPA)
$\bigcirc$	d. For some breeds (coverage not expanded since the adoption of the GPA)
$\bigcirc$	e. No, but action is planned and funding identified
$\bigcirc$	f. No, but action is planned and funding is sought
$\bigcirc$	g. No
Please	provide further details:
Markh	oze goat, Nadji goat, Sistani cattle, Bactrian camel, Caspian horse.
	oes your country have ex situ in vivo conservation measures in place for locally adapted s at risk of extinction and to prevent breeds from becoming at risk (SP 8 and SP 9)?

Glossary: Ex situ in vivo conservation - maintenance of live animal populations not kept under their normal management conditions - e.g. in zoological parks or governmental farms - and/or outside the area in which they evolved or are now normally found.

Glossary: Locally adapted breeds are breeds that have been in the country for a sufficient time to be genetically adapted to one or more of traditional production systems or environments in the country. The phrase "sufficient time" refers to time present in one or more of the

Page 38 of 49

a. Country requires no ex situ in vivo conservation measures because all locally adapted breeds are secure
O b. Yes for all breeds
<ul> <li>c. For some breeds (coverage expanded since the adoption of the GPA)</li> </ul>
<ul> <li>d. For some breeds (coverage not expanded since the adoption of the GPA)</li> </ul>
<ul> <li>e. No, but action is planned and funding identified</li> </ul>
f. No, but action is planned and funding is sought
○ g. No
Please provide further details:
Markhoze goat, Nadji goat, Sistani and Sarabi cattle, Bactrian camel, Caspian horse,/ sperm and /or DNA, embryo,
36. Does your country have ex situ in vitro conservation measures in place for locally adapted breeds at risk of extinction and to prevent breeds from becoming at risk (SP 8 and SP 9)? Glossary: Ex situ in vitro - conservation, under cryogenic conditions including, inter alia, the cryoconservation of embryos, semen, oocytes, somatic cells or tissues having the potential to reconstitute live animals at a later date.
a. Country requires no ex situ in vitro conservation measures because all locally adapted breeds are secure
○ b. Yes for all breeds
c. For some breeds (coverage expanded since the adoption of the GPA)
<ul> <li>d. For some breeds (coverage not expanded since the adoption of the GPA)</li> </ul>
<ul> <li>e. No, but action is planned and funding identified</li> </ul>
○ g. No
Please provide further details:
37. Please describe the measures (indicating for each whether they were introduced before or after the adoption of the GPA) or provide a web link to a published document that provides further information:
Population size trend.
<ul> <li>38. If your country has not established any conservation programmes, is this a future priority?</li> <li>a. Yes</li> <li>b. No</li> </ul>
Please provide further details:
39. Has your country identified the major barriers and obstacles to enhancing the conservation of its animal genetic resources?
a. Country requires no conservation programmes because all animal genetic resources are secure
• b. Yes
○ c. No
<ul> <li>d. No major barriers and obstacles exist. Comprehensive conservation programmes are in place</li> </ul>
Please provide further details. If barriers and obstacles have been identified, please list them:

40. If your country has existing ex situ collections of animal genetic resources, are there major gaps in these collections (SP 9, Action 5)?
O b. No
If yes, have priorities for filling the gaps been established?
<ul><li>a. Yes</li></ul>
<ul> <li>b. No, but action is planned and funding identified</li> </ul>
C. No, but action is planned and funding is sought
○ d. No
Please provide further details:
41. Are arrangements in place in your country to protect breeds and populations that are at risk from natural or human-induced disasters (SPA 3)?  O a. Yes, arrangements have been in place since before the adoption of the GPA
<ul> <li>b. Yes, arrangements put in place after the adoption of the GPA</li> </ul>
c. No, but action is planned and funding identified
<ul> <li>d. No, but action is planned and funding is sought</li> </ul>
● e. No
Please provide further details:
42. Are arrangements in place in your country for extraction and use of conserved genetic material following loss of animal genetic resources (e.g. through disasters), including arrangements to enable restocking (SP 9, Action 3)?
<ul> <li>a. Yes, arrangements have been in place since before the adoption of the GPA</li> </ul>
<ul> <li>b. Yes, arrangements put in place after the adoption of the GPA</li> </ul>
C. No, but action is planned and funding identified
<ul> <li>d. No, but action is planned and funding is sought</li> </ul>
● e. No
Please provide further details:
<ul> <li>43. Is your country conducting research to adapt existing, or develop new, methods and technologies for in situ and ex situ conservation of animal genetic resources (SP 11, Action 1)?</li> <li>a. Yes, research commenced before the adoption of the GPA</li> </ul>
<ul> <li>b. Yes, research commenced since the adoption of the GPA</li> </ul>
c. No, but action is planned and funding identified
<ul> <li>d. No, but action is planned and funding is sought</li> </ul>
○ e. No

Please provide further details. If yes, please briefly describe the research:
44. Does your country implement programmes to promote documentation and dissemination of knowledge, technologies and best practices for conservation (SP 11, Action 2)?  C a. Yes, programmes commenced before the adoption of the GPA
<ul> <li>b. Yes, programmes commenced since the adoption of the GPA</li> </ul>
C. No, but action is planned and funding identified
O d. No, but action is planned and funding is sought
○ e. No
Please provide further details:
45. What are your country's priority requirements for enhancing conservation measures for animal genetic resources? Please list and describe them:
Public awareness, animal keeper awareness, establishment of breed associations, enough budget, governmental support.
46. Please provide further comments describing your country's activities related to Strategic Priority Area 3: Conservation (including regional and international cooperation)
Note: It is not necessary to duplicate information provided in previous sections. Where relevant, please provide cross-references.
Enough budget and governmental support.
STRATEGIC PRIORITY AREA 4: POLICIES, INSTITUTIONS AND CAPACITY-BUILDING IMPLEMENTATION AND FINANCING OF THE GLOBAL PLAN OF ACTION FOR ANIMAL GENETIC RESOURCES
<ul> <li>The state of national institutions for planning and implementing animal genetic resources measures.</li> <li>The state of information sharing.</li> <li>The state of educational and research facilities capacity for characterization, inventory, and monitoring, sustainable use, development, and conservation.</li> <li>The state of awareness of the roles and values of animal genetic resources.</li> <li>The state of policies and legal frameworks for animal genetic resources.</li> </ul>
47. Does your country have sufficient institutional capacity to support holistic planning of the livestock sector (SP 12, Action1)?  • a. Yes, sufficient capacity has been in place since before the adoption of the GPA
b. Yes, sufficient capacity is in place because of progress made after the adoption of the GPA
c. No, but action is planned and funding identified
d. No, but action is planned and funding is sought
e. No

Please provide further details:

48. What is the current status of your country's national strategy and action plan for animal generatesources (SP 20)?
Glossary: National strategy and action plan for animal genetic resources: a strategy and plan, agreed by stakeholders and preferably government-endorsed, that translates the internationally agreed Global Plan of Action for Animal Genetic Resources into national actions, with the aim of ensuring a strategic and comprehensive approach to the sustainable use, development and conservation of animal genetic resources for food and agriculture.
<ul> <li>a. Previously endorsed national strategy and action plan is being updated (or new version has been endorsed)</li> </ul>
b. Completed and government-endorsed
C. Completed and agreed by stakeholders
O d. In preparation
<ul> <li>e. Preparation is planned and funding identified</li> </ul>
f. Future priority activity
○ g. Not planned
Please provide further details. If available, please provide a copy of your country's national strategy and action plan as a separate document or as a web link:
49. Are animal genetic resources addressed in your country's National Biodiversity Strategy and Action Plan (http://www.cbd.int/nbsap/)?  • a. Yes
○ b. No, but they will be addressed in forthcoming plan
O c. No
Please provide further details:
·
<ul><li>50. Are animal genetic resources addressed in your country's national livestock sector strategy, plan or policy (or equivalent instrument)?</li><li>a. Yes</li></ul>
b. No, but they will be addressed in a forthcoming strategy, plan or policy
c. No, animal genetic resources are not addressed
d. No, the country does not have a national livestock sector strategy, plan or policy
Please provide further details. If available, please provide the text of the strategy, plan or policy or a web link to the text:
51. Has your country established or strengthened a national database for animal genetic resource (independent from DAD-IS) (SP 15, Action 4)?
<ul> <li>b. Yes, a national database is in place because of progress made since the adoption of the GPA</li> </ul>
C. Yes, a national database is in place but still requires strengthening (progress since adoption of the GPA)
O d. Yes, a national database is in place but still requires strengthening (no progress since adoption of the GPA)
<ul> <li>e. No, but action is planned and funding identified</li> </ul>
of No but action is planned and funding is sought

Please provide further details:
52. Have your country's national data on animal genetic resources been regularly updated in DAD-IS?
Note that the Commission on Genetic Resources for Food and Agriculture has requested FAO to produce global status and trends reports every two years.
<ul> <li>a. Yes, regular updates have been occurring since before the adoption of the GPA</li> </ul>
O b. Yes, regular updates started after the adoption of the GPA
c. No, but it is a future priority
O d. No
Please provide further details:
53. Has your country established a National Advisory Committee for Animal Genetic Resources (SP 12, Action 3)?
a. Yes, established before the adoption of the GPA
b. Yes, established after the adoption of the GPA
c. No, but action is planned and funding identified
d. No, but action is planned and funding is sought
○ e. No
Please provide further details. If a National Advisory Committee has been established, please list its main functions:
54. Is there strong coordination and interaction between the National Focal Point and stakeholders involved with animal genetic resources, such as the breeding industry, livestock keepers, government agencies, research institutes and civil society organizations (SP 12, Action 3)?
<ul> <li>b. Yes, strong coordination was established after the adoption of the GPA</li> </ul>
C. No, but action is planned and funding identified
<ul> <li>d. No, but action is planned and funding is sought</li> </ul>
○ e. No
Please provide further details:
<ul> <li>55. Does the National Focal Point (or other institutions) undertake activities to increase public awareness of the roles and values of animal genetic resources (SP 18)?</li> <li>a. Yes, activities commenced before the adoption of the GPA</li> </ul>
b. Yes, activities commenced after the adoption of the GPA
C. No, but activities are planned and funding identified
O d. No, but activities are planned and funding is sought

$\circ$	e. No
Please	provide further details:
	oes your country have national policies and legal frameworks for animal genetic resources gement (SP 20)?
<ul><li>O</li><li>O</li><li>O</li></ul>	a. Yes, comprehensive national policies and legal frameworks were in place before the adoption of the GPA and are kept up to date. b. Yes, comprehensive and up-to-date national policies and legal frameworks in place because of progress made since the adoption of the GPA c. Yes, some national policies and legislation in place (strengthened since the adoption of the GPA)
$\circ$	d. Yes, some national policies and legislation in place (not strengthened since the adoption of the GPA)
$\circ$	e. No, but action is planned and funding identified
0	f. No, but action is planned and funding is sought
0	g. No
Please	provide further details:
	<u>'</u>
progra	hich of the following options best describes the state of training and technology transfer ammes in your country related to inventory, characterization, monitoring, sustainable use, opment and conservation of animal genetic resources (SP14, Action 1)?
$\bigcirc$	a. Comprehensive programmes have been in place since before the adoption of the GPA
$\bigcirc$	b. Comprehensive programmes exist because of progress made since the adoption of the GPA
•	c. Some programmes exist (further progress since the adoption of the GPA)
$\circ$	d. Some programmes (no further progress since the adoption of the GPA)
$\circ$	e. None, but action is planned and funding identified
$\circ$	f. None, but action is planned and funding is sought
$\bigcirc$	g. None
Please	provide further details:
	ave organizations (including where relevant community-based organizations), networks and ives for sustainable use, breeding and conservation been established or strengthened (SP 14, a 3)?
0	<ul> <li>a. Yes, comprehensive organizations, networks and initiatives have existed since before the adoption of the GPA</li> <li>b. Yes, comprehensive organizations, networks and initiatives exist because of progress made since the adoption of the GPA</li> </ul>
•	c. Yes, some organizations, networks and initiatives exist (established or strengthened since adoption of the GPA)
$\circ$	d. Yes, some organizations, networks and initiatives exist (but no progress made since adoption of the GPA)
$\circ$	e. No, but action is planned and funding identified
$\circ$	f. No, but action is planned and funding is sought
$\circ$	g. No
Please	provide further details:
	•
1	

59. Ar	e there any national NGOs active in your country in the fields of:
Chara	cterization?
•	a. Yes
$\circ$	b. No
Sustai	nable use and development?
•	c. Yes
$\bigcirc$	d. No
Conse	rvation of breeds at risk?
•	e. Yes
$\circ$	f. No
If yes, p	lease list the national NGOs and provide links to their web sites:
	cooperations and society are engaged such as horse breed association and camel breeders cooperative and also other scientific society.
anima	as your country established or strengthened research or educational institutions in the field of I genetic resources management (SP 13, Action 3)?  a. Yes, adequate research and education institutions have existed since before the adoption of the GPA  b. Yes, adequate research and education institutions exist because of progress made since the adoption of the GPA  c. Yes, research and education institutions exist but still require strengthening (progress made since the adoption of the GPA)  d. Yes, research and education institutions exist but still require strengthening (no progress made since the adoption of the GPA)  e. No, but action is planned and funding identified  f. No, but action is planned and funding is sought  g. No  provide further details:
Area 4 coope	ease provide further comments describing your country's activities related to Strategic Priority Priority Prolicies, Institutions and Capacity-building (including regional and international ration)  It is not necessary to duplicate information provided in previous sections. Where relevant, please the cross-references.
	is enough infrastructure for research, but not for education and training.

## IMPLEMENTATION AND FINANCING OF THE GLOBAL PLAN OF ACTION FOR ANIMAL GENETIC RESOURCES

- The state of international collaboration for planning and implementing animal genetic resources measures
- The state of financial resources for the conservation, sustainable use and development of animal genetic resources
- 62. Has your country established or strengthened international collaboration in (SP 16): Characterization?

$\circ$	a. Yes
$\bigcirc$	b. No, but action is planned and funding identified
$\circ$	c. No, but action is planned and funding is sought
•	d. No
Susta	inable use and development?
$\bigcirc$	e. Yes
$\bigcirc$	f. No, but action is planned and funding identified
$\bigcirc$	g. No, but action is planned and funding is sought
•	h. No
Conse	ervation of breeds at risk?
•	i. Yes
$\bigcirc$	j. No, but action is planned and funding identified
$\bigcirc$	k. No, but action is planned and funding is sought
$\bigcirc$	I. No
Please	provide further details:
Chara  Sustai  Conse	re there any international NGOs active in your country in the fields of: cterization? a. Yes b. No inable use and development? c. Yes d. No ervation of breeds at risk? e. Yes f. No blease list the international NGOs:
the GI	as national funding for animal genetic resources programmes increased since the adoption of PA?  a. Yes  b. No  provide further details:
65. Ha	as your country received external funding for implementation of the GPA?  a. Yes  b. No  c. No, because country generally does not receive external funding

Please provide further details:		
FAO equipment support for buffalo in Jabal station. ACSAD financial support for Bactrian camel improvement.		
66. Has your country supported or participated in international research and education programmes assisting developing countries and countries with economies in transition to better manage animal genetic resources (SP 15 and 16)?		
a. Yes, support or participation in place before the adoption of the GPA and strengthened since		
O b. Yes, support or participation in place before the adoption of the GPA but not strengthened since		
C. Yes, support or participation in place since the adoption of the GPA		
Od. No, but action is planned and funding identified		
<ul> <li>e. No, but action is planned and funding is sought</li> </ul>		
<ul><li>f. No</li></ul>		
Please provide further details:		
67. Has your country supported or participated in programmes aimed at assisting developing countries and countries with economies in transition to obtain training and technologies and to build their information systems (SP 15 and 16)?		
a. Yes, support or participation commenced before the adoption of the GPA and strengthened since		
b. Yes, support or participation commenced before the adoption of the GPA but not strengthened since		
c. Yes, support or participation commenced since the adoption of the GPA		
d. No, but action is planned and funding identified		
e. No, but action is planned and funding is sought		
○ f. No		
Please provide further details:		
Sheep and goat artificial insemination in case of Azerbaijan, Afghanistan and Tajikistan, apiculture improvement in Lebanon.		
68. Has your country provided funding to other countries for implementation of the Global Plan of Action?		
C a. Yes		
<ul> <li>b. No, but action is planned and funding identified</li> </ul>		
C. No, but action is planned and funding is sought		
● d. No		
e. No, because country is generally not a donor country		
Please provide further details. If relevant, specify whether funding was bilateral or multilateral; research cooperation or aid; and to whom and for what it was given:		
69. Has your country contributed to international cooperative inventory, characterization and monitoring activities involving countries sharing transboundary breeds and similar production systems (SP 1, Action 5)?		
<ul> <li>b. No, but action is planned and funding identified</li> </ul>		

C. No, but action is planned and funding is sought	
● d. No	
Please provide further details:	
70. Has your country contributed to establishing or strengthening global or regional informal systems or networks related to inventory, monitoring and characterization of animal generous (SP 1, Action 6)?	
<ul> <li>b. No, but action is planned and funding identified</li> </ul>	
C. No, but action is planned and funding is sought	
● d. No	
Please provide further details:	
Infrastructure for such actions are not developed in these areas.	
71. Has your country contributed to the development of international technical standards protocols for characterization, inventory and monitoring of animal genetic resources (SP2 a. Yes	
<ul> <li>b. No, but action is planned and funding identified</li> </ul>	
C. No, but action is planned and funding is sought	
<ul><li>d. No</li></ul>	
Please provide further details:	
Infrastructure for such actions are not developed in these areas.	
72. Has your country contributed to the development and implementation of regional in sconservation programmes for breeds that are at risk (SP 8, Action 2; SP 10, Action 1)?  ○ a. Yes	itu
<ul> <li>b. No, but action is planned and funding identified</li> </ul>	
C. No, but action is planned and funding is sought	
● d. No	
Please provide further details:	
Infrastructure for such actions are not developed in these areas.	
73. Has your country contributed to the development and implementation of regional ex conservation programmes for breeds that are at risk (SP 9, Action 2; SP 10, Action 3; SP 4)?	
○ a. Yes	
<ul> <li>b. No, but action is planned and funding identified</li> </ul>	
C. No, but action is planned and funding is sought	
● d. No	
Please provide further details:	
Infrastructure for such actions are not developed in these areas.	

74. Has your country contributed to the establishment of fair and equitable arrangements for the storage, access and use of genetic material stored in supra-national ex situ gene banks (SP9, Action 3)?				
$\circ$	○ a. Yes			
$\bigcirc$	b. No, but action is planned and funding identified			
$\bigcirc$	C. No, but action is planned and funding is sought
