### Annex 4: Plenary presentations (Tuesday 4 March)

**Annex 4.1: New Zealand-Pilot Study** 

## 2010 FRA Planning

- Started planning in late 2007
- >Employed a research assistant
- Prioritised tables and identified areas of greatest challenge
- Now working through tables in order of priority
- Made early contact with key holders of data

### Pre-filled report

- > Useful to hinve 2010 report populated with 2005
- > Should lessed with consistency of date.
- > Crostes two way process with FAO staff
- > Hisphic to have communits and definitions from FAX3 staff pointing to priority areas to update (e.g. NZ country area, growing stock estimates)

### Most relevant tables

- -Tables 1,2 4 5 0 8
- >T/ Forest and land arens kundamental
- > T2/(forest ownership) public / provate split straight forward
- ▼16-8 Independes forest growing steck analysis needs to be completed (CMS data).

### Most relevant tables - cont

- T10 Invasive species both weeds and introduced browsing matrimals, also wind
- >T)1 and 13 forestry is a significant business and NZ has good economic data

# Challenges Only limited new mapping completed since 2005 report Rispid changes in forest ownership Growing stock, biomass and carbon for indigenous forests. Until very recently no national scale inventory undertaken Patchy national level data on biotic & abiotic disfurbance

## Stimulary The FRA process is asserting New Zealand stompstating by Focusing identical or data interpretation Assigning in building into agency cooperation/connections - Ultimobility we would like to produce periodic / State of the Foreists' reports that encourage greater debate on the role of foreist, forest policy and sustainable land management policies.
