FOREWORD

This document is the twelfth edition of the World Statistical Compendium. The first issue was published in 1980 and substantially revised and up-dated in 1983, 1986, 1989, 1992, 1994, 1996, 1998, 2001, 2003 and 2005. The present edition, prepared in response to the ever growing demand for coherent statistical data in the hides, skins and derived products sector, contains up-dated figures up to 2007. Country series have been revised in cases where new information has become available. An integrated approach used in the previous compendia has been adopted. The compendium contains results of statistical analysis of some 190 countries linking stages of processing from the raw hide to the finished product stage. The methodological approach adopted is described in more detail in the 1986 edition. Please note that some countries are listed under two different country groups for different years according to their change in economic aggregation. In particular: Cyprus appears in Near East up to 2003 and in EU (25) from 2004; Czech Republic, Hungary, Malta, Poland, Slovakia and Slovenia appear in Rest of Europe up to 2003 and in EU (25) from 2004; Estonia, Latvia and Lithuania appear in Area Former USSR up to 2003 and in EU (25) from 2004.

The detailed statistical data on production, utilization and trade of hides and skins, leather and leather footwear are preceded by eleven summary tables and brief analytical notes highlighting the salient features and changes which have taken place in the hides and skins and leather sector.

Despite progress in enhancing the coherence and comparability of the data presented, shortcomings still exist. It is to be hoped that the work undertaken by the FAO Sub-Group on Hides and Skins will further advance progress in eliminating existing statistical deficiencies.

Symbols:

- means nil
- 0.0 means that figures are less than one-half of the unit stated
- tonnes means metric tonnes
- Africa excludes Near East in Africa (i.e. Egypt, Libyan Arab Jamahiriya and Sudan)
- Latin America includes the Caribbean

AVANT-PROPOS

Ceci est la douzième édition du Recueil de statistiques mondiales. Publié pour la première fois en 1980, le Recueil a été considérablement remanié et mis à jour en 1983, 1986, 1989, 1992, 1994, 1996, 1998, 2001, 2003 et 2005. La présente édition, qui a été préparée en réponse à une demande croissante de données statistiques cohérentes sur le secteur des cuirs, peaux et produits dérivés, contient des chiffres allant jusqu'en 2007. Les séries de données nationales ont été révisées lorsqu'il y avait de nouvelles informations disponibles. On a utilisé la même méthode intégrée que dans les recueils précédents, c'est-à-dire que l'on donne, pour 190 pays, les résultats des analyses statistiques reliant les différentes phases de traitement, du cuir brut aux produits finis. La méthode adoptée est décrite en détail dans l'édition de 1986. Prière de noter que certains pays sont énumérés dans deux différents groupes de pays selon leur changement d'agrégation économique. En particulier: Chypre paraître dans le Proche-Orient jusqu'à 2003 et dans l'UE (25) de 2004; la République tchèque, l'Hongrie, Malte, la Pologne, la Slovaquie et la Slovène paraissent dans le Rest d'Europe jusqu'à 2003 et dans l'UE (25) de 2004; l'Estonie, le Lettonie et la Lituanie paraissent dans la zone de l'ex-URSS jusqu'à 2003 et dans l'UE (25) de 2004.

Les statistiques détaillées de la production, de l'utilisation et du commerce des cuirs et peaux, du cuir préparé et des chaussures en cuir sont précédées de 11 tableaux synthétiques et de brèves notes qui mettent en exergue les faits saillants et les changements intervenus dans ce secteur.

Même si l'on a amélioré la cohérence et la comparabilité des données présentées, des lacunes subsistent. Il faut espérer que les travaux qui seront entrepris par le Sous-Groupe FAO des cuirs et peaux permettront progressivement de les combler.

Abréviations:

- néant

0.0 chiffres inférieurs à la moitié de l'unité indiquée

tonnes tonne métriques

L'Afrique ne comprend pas le Proche Orient en Afrique (Égypte, Jamahiriya arabe libyenne et Soudan)

L'Amérique latine comprend les Caraïbes

INTRODUCCIÓN

El presente documento es la duodécima edición del Compendio estadístico mundial. La primera edición se publicó en 1980 y fue considerablemente revisada y actualizada en 1983, 1986, 1989, 1992, 1994, 1996, 1998, 2001, 2003 y 2005. Esta versión, preparada para satisfacer la demanda cada vez mayor de datos estadísticos coherentes en el sector de los cueros, pieles y productos derivados, contiene cifras actualizadas hasta 2007. Las series por países se han revisado en los casos en que se disponía de nueva información. Se ha adoptado el mismo enfoque integrado utilizado en los compendios anteriores, presentando los resultados del análisis estadístico relativos a las diversas etapas de elaboración, desde el cuero sin curtir hasta el producto terminado en unos 190 países. En la edición de 1986 se describe con mayor detalle la metodología adoptada.

Se ruega notar que algunos países están incluidos en dos diferentes grupos de países según el cambio de agrupación económica. En particular:

Chipre aparece en el Cercano Oriente hasta 2003 y en la UE (25) desde 2004; República Checa, Hungría, Malta, Polonia, República Eslovaca y Eslovenia aparecen en el Resto de Europa hasta 2003 y en la UE (25) desde 2004; Estonia, Letonia y Lituania aparecen en la región de la ex URSS hasta 2003 y en la UE (25) desde 2004.

Las estadísticas detalladas sobre la producción, utilización y comercio de los cueros y pieles sin curtir, el cuero y el calzado de cuero están precedidas por 11 cuadros resumidos, a los que acompañan breves notas analíticas en las que se exponen las características principales y los cambios registrados en el sector de los cueros y pieles sin curtir y los curtidos.

Aunque se ha logrado una mayor coherencia y comparabilidad de los datos presentados, sigue habiendo algunas deficiencias. Es de esperar que el trabajo realizado por el Subgrupo sobre Cueros y Pieles de la FAO contribuya a facilitar la eliminación de las deficiencias estadísticas existentes.

Símbolos:

- significa cero
- 0,0 significa que las cifras son inferiores a la mitad de la unidad indicada
- tonnes significa toneladas métricas
- África no incluye el Cercano Oriente en África (Egipto, Jamahiriya Árabe Libia y Sudán)
- América Latina incluye el Caribe

SALIENT FEATURES OF THE HIDES AND SKINS AND DERIVED PRODUCTS ECONOMY

Summary Tables I-XI have been aggregated from country data presented in the World Compendium. Together with brief accompanying notes, they provide information on salient features and major developments characterizing the hides, skins, leather and leather manufactures economy at global and regional levels.

FAITS SAILLANTS DE L'ECONOMIE DES CUIRS ET PEAUX ET DES PRODUITS DERIVES

Les tableaux récapitulatifs I à XI ont été composés à partir de données par pays contenues dans le présent Recueil. Accompagnés de brèves notes explicatives, ils mettent en lumière les faits saillants et les principaux traits de l'évolution de l'économie des cuirs et peaux, des cuirs préparés et des articles en cuir aux niveaux régional et mondial.

CARACTERISTICAS PRINCIPALES DE LA ECONOMIA DE LOS CUEROS, PIELES Y PRODUCTOS DERIVADOS

Los cuadros sintéticos I-XI están basados en los datos por países contenidos en el presente Compendio. Junto con las breves notas que los acompañan, tienen por objeto ilustrar algunas de las principales características y aspectos destacados de la economía de los cueros y pieles sin curtir, cuero y manufacturas de cuero, nivel mundial y regional.

1/ Theoretically, net trade at the global level should be close to zero, but in practice due to shipping time and reporting discrepancies the difference can be significant.

2/ Wet salted for bovine, dry without wool for sheep and dry for goat.

3/ While there is a certain quantity of leather from sheep and goat going into footwear, leather shoes balances have only been shown against the bovine part of the table for reasons of simplicity and lack of data.

Note: - signifies net exports, + net imports

Notes to Table I

Table I presents in an integrated form, data on output, trade and apparent availability of hides and skins at subsequent levels of processing, globally and by the two major country groups, for the period 2004-2006.

Globally, the bovine population of some 1 560 million head yielded approximately 6.1 million tonnes of raw hides on a wet salted basis. The average unit weight per hide was 18.3 kg (see also Table II). Heavy leather production totalled 500 200 tonnes, while 13 832 million square feet of light leather, including split leather, were produced. Some 48 percent of the light leather was converted into 4 487 million pairs of shoes with leather uppers, utilizing roughly 6 730 million square feet (see also Table IX). The remaining 52 percent of light bovine leather was absorbed by other diverse end-uses, largely garments, furniture and travel goods, including handbags.

A global sheep and goat flock of 1 893 million generated 657 000 tonnes of raw skins on a dry basis. This raw material was converted into 4 689 million square feet of sheep and goat leather, i.e. some 7.1 square feet per kg. of raw skin. While some of the sheep leather was used in shoe linings and some goat leather in shoe uppers, the bulk found its way into a vast variety of leather articles ranging from leather clothing to wristwatch bands.

Developments at the various processing levels are described in the notes to Tables II to X which follow.

2/ Without wool.

Notes to Table II

The most important factors determining output of raw hides and skins are the animal population, the off-take ratio and the weight per hide or skin. While developing countries hold nearly 79 percent of the world bovine herd, they together produce about 67 percent of the world hide output on a numerical basis, an improvement over the situation in the end-eighties. As the weight per hide on average is lower in developing countries, they accounted for 60 percent of total output (see Table III). The widest disparity between bovine population and output of hides occurs in Africa which accounts for more than 11 percent of the world's cattle but for only 4.7 percent of hide output on a weight basis.

The situation is more favourable to developing countries with regard to sheepskins. They provide grazing for 67 percent of the global sheep flock and account for the same proportion of the numbers of sheepskins produced globally. Again, however, the gap between output of sheepskins in the developing and developed countries widens when expressed in weight terms.

In the case of goatskins the respective shares of developing countries' flocks and output almost correspond at around 95 percent. However, there are considerable discrepancies in productivity in the goat flocks among developing countries, the off-take ratio varying between 27 and 56 percent.

3/ Dry weight

4/ Figures shown may be slightly different from the sum total due to existence of some "other developing countries" not shown separately.

Notes to Table III

Between the end-eighties and the period 2004-2006, world output of bovine hides and skins rose by about 15 percent. Output continued to grow strongly in developing countries, reflecting improvements in cattle husbandry and expansion in beef production, while it contracted in most developed regions. Latin America and the Far East produce more than other regions.

World sheepskin production grew by 6 percent. As in the case of cattlehides, growth in output was higher in developing countries.

Global output of goatskins grew by 64 percent (3.2 percent per year) during the period under review. Production in developing countries, which dominate goatskin production, rose by 69 percent and in developed countries by 12 percent.

Notes to Table IV

Globally, 38 percent of the output of raw bovine hides entered international trade in the period 2004-2006, an increase from 37 percent in the end-eighties. World shipments rose by 21 percent (1.2 percent per year) with the developing countries in aggregate increasing their exports at a faster rate than the developed countries. The developing countries' share of global exports increased a little in the period under review.

Sheepskin output entering world trade decreased from 43 percent in the end-eighties to 41 percent in the period 2004-2006. Oceania is now the dominant exporting region, accounting for 37 percent of global exports.

The proportion of goatskin output entering trade channels fell from 20 percent in the end-eighties to 4 percent in the period 2004-2006, reflecting rapidly growing utilization in producing countries. World shipments in raw goat skins shrank by 6.4 percent per year while production expanded. Developing countries, where tanning capacity rose fastest, reduced their exports of raw skins by about 71 percent (7.5 percent per annum). Exports from developed countries declined by 38 percent, at a rate of 2.9 percent per annum.

1/ Wet Salted Weight

2/ Dry weight without wool

3/ Dry weight

Note: - signifies net exports, + net imports

Theoretically, net trade at the global level should be zero, but in practice due to shipping time and reporting discrepancies the difference can be significant.

Notes to Table V

Developing countries became net importers of raw bovine hides and skins in the early seventies, having been net exporters to the tune of 165 000 tonnes in the late sixties. Net imports of developing countries increased from 484 000 tonnes in the end-eighties to 1 052 000 in the period 2004-2006 reflecting the expansion in tanning capacity in most developing countries, especially in the Far East region, where the fast-growing net imports were initially to those newly industrialized countries (NICs) with very limited raw material resources. However, some leather producing countries with an ample raw material base, such as India, Pakistan and Thailand, are also importing considerable volumes of raw hides. North America and Oceania are the major exporting regions.

With regard to sheepskins, developing countries became net importers in the late-nineties, with Near East and Far East countries showing the fastest growth. Net export availabilities of goatskins have fallen gradually since the end-eighties, reflecting a higher rate of domestic processing; developing countries are net importers.

Conversely, developed countries were net importers of sheepskins in the mid-eighties (average 1986-1988) but are now net exporters.

Notes to Table VI

In a reversal of its long-term decline, which has been apparent for a number of years, global output of heavy leather increased from the end-eighties to the period 2004-2006 in line with an increase of about 13 percent in leather shoes production. The principal producing region is the Far East where production expanded considerably, particularly in China, which has become the largest producer of leather shoes. Output of heavy leather continued to decline in developed regions as the major developed countries reduced heavy leather tanning in the period under review.

The sustained expansion of tanning capacity in developing countries is reflected in the growth in output of light bovine leather. While world production rose by 47 percent, developing countries increased their output by 108 percent, lifting their share in tanning of this type of leather to over 61 percent. The fastest rate of growth took place in the Far East. Developed regions overall reduced tanning of light bovine leather.

Global output of sheep and goat leather expanded by 25 percent. As with bovine light leather, output of sheep and goat leather in developing countries expanded markedly and their share in total output grew from 54 to about 78 percent in the period under review. The strongest gains in percentage terms occurred in the Near East (4.9 percent per year). Tanning of sheep and goat skins declined in the developed countries.

Notes to Table VII

Trade in bovine light leather expanded by nearly four times (7.5 percent per year) in the period under review, while exports of sheep and goat leather grew by about 28 percent (1.5 percent per year) and trade in heavy leather rose by 85 percent (3.9 percent per year)

The developing countries' share in shipments of light bovine leather rose from 54 percent to 68 percent and their share of trade in sheep and goat leather rose from 42 percent to 60 percent. The Far East is the principal light bovine leather exporting region.

Shipments of light leather from all types of hides and skins rose in most developed regions.

Notes to Table VIII

World output of shoes with leather uppers now exceeds 4 480 million pairs, having increased by about 13 percent during the period under review. Production in developing countries rose by 103 percent, reflecting investment in manufacturing capacities, and their share in global output rose to 77 percent from 43 percent. As in the case of leather, the expansion in leather shoe production was most marked in the Far East region and to some degree in Latin America. Production declined in all developed regions.

World trade in shoes with leather uppers expanded strongly with an average annual growth rate of 4.7 percent. Shipments from developing countries increased fastest at 7.4 percent per annum and their share in world exports rose from 50 percent to about 76 percent. Asian countries accounted for most of this expansion, reflecting the advances in industrialization in a number of countries. Europe had around 90 percent of the world export market in footwear in the late sixties, but it lost market share to the Far East over the subsequent three decades. The Far East now has 69 percent of global trade compared with 23 percent for Europe.

The developing countries' share in leather shoe consumption rose from 30 percent in the end-eighties to about 45 percent. Per caput consumption decreased slightly at the world level, though in developing countries it increased from 0.3 to 0.4 pairs. Far Eastern and Latin American consumers' purchases per head increased while in Africa consumption remained constant. In developed countries per caput consumption of leather shoes increased in all country groups except in the area of the former USSR where it decreased markedly.

Notes to Table IX

Although figures in this table are rather broad estimates, they nevertheless shed some light on recent developments in the use of leather for various end-products. Worldwide, the share of light bovine leather going into shoe uppers, still the chief end-use, seems to have levelled-off at around 48 percent in the period under review. The share of light bovine leather going into leather shoes fell, reflecting the growth in other uses for leather, mainly clothing and upholstery. If sheep and goat leathers are also taken into account, less than half the world's total leather production is utilized in footwear.

1) - Figures shown may be slightly different from the sum total due to existence of some "other developing countries" not shown separately.

Notes to Table X

This table highlights some significant features of developments in the value of the export trade in the hides, skins and leather sector. While the aggregate value of shipments of all types of raw hides and skins of developing countries increased, their share in world exports of raw stock levelled-off at 12.7 percent. Some 83 percent of the value of international export trade in raw hides and skins is accounted for by North America, Europe and Oceania.

The value of leather shipped from developing countries, particularly from the Far East and Latin America, has increased markedly. Developing countries earned US\$2 768 million from leather sales in the end-eighties, contrasted with US\$10 251 million in the period 2004-2006. The developing countries' share of global export values increased from about 37 percent to 55 percent.

The value of shipments of leather shoes from developing countries from this sector rose two-fold from US\$6 453 million to US\$15 910 million during the period under review. The degree of penetration of international trade in leather shoes by developing countries grew to 46 percent in the period 2004-2006, from 38 percent in the end-eighties. Europe retained its position as the world's foremost leather shoe exporter in terms of value, although its share fell from 60 percent to 52 percent.

Developing countries increased their aggregate export earnings from raw hides and skins, leather and leather footwear from about US\$9 800 million to US\$26 800 million during the period under review and their share in the total sector rose from 33 percent to 46 percent. However, there are considerable regional variations. The Far East has become by far the most important exporting region among developing countries thanks to its success in processing and manufacturing. The relative share of the Near East and Africa in total exports declined, as did those of each developed country, with the exception of the area of the former USSR.

Table XI: Hides, Skins, Leather and Leather Footwear: Their Significance in Relation to Trade in other Commodities, Average 2003-2005

	DEVELOPING COUNTRIES	DEVELOPED COUNTRIES	WORLD

Notes to Table XI

Table XI highlights the significance of trade in the hides, skins and leather sector vis-à-vis other commodities. The value of exports of raw hides and skins, leather and leather shoes amounts to nearly US\$54 000 million. These figures rank hides and skins among the most important internationally traded commodities.

2/ Théoriquement, le commerce net au niveau mondial devrait être zéro, les soldes restants sont dus à des écarts statistiques.

3/ Une certaine quantité de peaux de moutons et de chèvres est utilisée pour la fabrication des chaussures mais, pour des raisons de simplicité, le bilan des chaussures en cuir n'est indiqué que pour le cuir de bovin.

Note: - = Importations nettes

Notes du Tableau I

Le Tableau I présente des données intégrées sur la production, le commerce et la disponibilité apparente de cuirs et peaux, à différents niveaux de traitement, pour le monde et pour les deux grands groupes de pays, durant la période 2004-2006.

Au niveau mondial, une population bovine d'environ 1 560 millions de têtes a donné quelque 6,1 millions de tonnes de cuirs bruts (poids salé humide). Le poids unitaire moyen par peau est de 18.3 kg (voir aussi Tableau II). La production de cuirs lourds s'est élevée à 500 200 tonnes et celle de cuirs préparés légers, y compris le cuir refendu, à 13 832 millions de pieds carrés. Environ 48 pour cent de ce cuir préparé a servi à confectionner 4 487 millions de paires de chaussures à dessus en cuir, en utilisant à peu près 6 730 millions de pieds carrés (voir aussi Tableau IX). Les 52 pour cent de cuirs préparés légers de bovins restants ont été consacrés à diverses utilisations finales, essentiellement à la fabrication de vêtements, de meubles et d'articles de voyage, y compris la maroquinerie.

Un troupeau mondial d'ovins et de caprins d'environ 1 893 millions de têtes a donné 657 000 tonnes de peaux brutes (poids sec). Cette matière première transformée a donné 4 689 millions de pieds carrés de cuirs préparés de moutons et de chèvres, soit quelque 7,1 pieds carrés par kg de peaux brutes. Une partie des peaux de moutons a été utilisée comme doublure de chaussures et une partie des peaux de chèvres a servi à faire des dessus de chaussures, mais le gros de la production a été employé pour confectionner des articles en cuir très variés depuis les bracelets-montres jusqu'aux vêtements.

L'évolution aux différents niveaux de transformation est décrite dans les notes des Tableaux II à X ci-après.

1/ Les chiffres indiqués peuvent différer légèrement du total, certains "autres pays en développement" n'étant pas indiqués séparément.

Notes du Tableau II

Les principaux facteurs influençant la production de cuirs et peaux bruts sont la production animale, le taux d'exploitation des troupeaux et le poids des cuirs et peaux. Alors que les pays en développement détiennent de près de 79 pour cent du troupeau bovin mondial, leur production globale de cuir à l'unité, représente 67 pour cent du total mondial, ce qui constitue un progrès par rapport à la fin des années 80. Le poids de chaque peau étant en moyenne inférieur dans les pays en développement, ces derniers n'ont représenté que 60 pour cent de la production totale (voir Tableau III). L'écart le plus grand entre la population bovine et la production de cuir est enregistré en Afrique, où se trouvent plus de 11 pour cent des bovins mondiaux mais 4,7 pour cent seulement de la production de cuir en poids.

La situation est plus favorable aux pays en développement en ce qui concerne les peaux de moutons. Ces pays détiennent de près de 67 pour cent du troupeau mondial de moutons et leur part de la production mondiale de peaux de moutons est équivalente. Là encore, l'écart entre la production de peaux de moutons des pays en développement et celle des pays développés s'accroît si ces chiffres sont exprimés en poids.

Dans le cas des peaux de chèvres, la part des pays en développement dans le cheptel caprin et dans la production se situe autour de 95 pour cent du total. Toutefois, il y a des écarts considérables de productivité des cheptels caprins entre les pays en développement, le taux d'exploitation variant entre 27 et 56 pour cent.

Notes du Tableau III

Entre la fin des années 80 et la période 2004-2006, la production mondiale de cuirs et peaux de bovins a augmenté plus de 15 pour cent. La production a continué à augmenter fortement dans les pays en développement, en raison de l'amélioration de l'élevage bovin et de l'expansion de la production de viande de boeuf, mais elle a diminué dans les régions les plus développées. Maintenant, l'Amérique latine et l'Extrême Orient produisent plus que n'importe quelle autre région.

La production mondiale de peaux de moutons a augmenté de 6 pour cent. Comme pour les cuirs de bovins, la croissance a été plus rapide dans les pays en développement.

La production mondiale de peaux de chèvres a augmenté de 64 pour cent (3,2 pour cent par an) pendant la période à l'étude. La production des pays en développement, principaux producteurs de peaux de chèvres, a augmenté de 69 pour cent et celle des pays développés de 12 pour cent.

Notes du Tableau IV

A l'échelle mondiale, 38 pour cent de la production de cuirs bruts de bovins est entrée dans le commerce international durant la période 2004-2006, soit une augmentation par rapport aux 37 pour cent à la fin des années 80. Les expéditions mondiales ont augmenté de 21 pour cent (1,2 pour cent par an) et les pays en développement dans leur ensemble ont accru leurs exportations à un rythme plus soutenu que les pays développés. La part des pays en développement dans les exportations mondiales a quelque peu augmenté pendant la période à l'étude.

La production de peaux de moutons entrant dans le commerce international a diminué de 43 pour cent à la fin des années 80 à 41 pour cent durant la période 2004-2006. L'Océanie est devenue la principale région exportatrice, leurs exportations représentant 37 pour cent du total mondial.

La part de la production de peaux de chèvres entrant dans les circuits commerciaux a baissé aussi de 20 pour cent à la fin des années 80 à 4 pour cent durant la période 2004-2006, par suite d'un accroissement rapide de l'utilisation dans les pays producteurs. Les livraisons mondiales de peaux de chèvres brutes ont fléchi de 6,4 pour cent par an tandis que la production augmentait. Les pays en développement - où la capacité de tannage a augmenté le plus rapidement - ont diminué leurs exportations de peaux brutes d'environ de 71 pour cent (7,5 pour cent par an). Les exportations des pays développés ont baissé de 38 pour cent (2,9 pour cent par an).

Note: - = Exportations nettes; + = Importations nettes

Théoriquement le commerce net au niveau mondial devrait être zéro, Les différences sont dues à des écarts statistiques,

Notes du Tableau V

Les pays en développement sont devenus importateurs nets de cuirs et peaux bruts de bovins au début des années 70, après avoir été exportateurs nets à hauteur de 165 000 tonnes à la fin des années 60. Les importations nettes des pays en développement sont passées de 484 000 tonnes à la fin des années 80 à 1 052 000 tonnes durant la période 2004-2006 par suite de l'expansion de la capacité de tannage de la plupart des pays en développement, mais surtout dans la région Extrême-Orient, où l'augmentation rapide des importations nettes a été due au départ aux pays nouvellement industrialisés dont les ressources en matières premières étaient très limitées. Dernièrement, des pays producteurs de cuirs, préparés disposant de matières premières abondantes, comme l'Inde, le Pakistan et la Thaïlande, ont commencé à importer des cuirs bruts en quantités considérables. L'Amérique du Nord et l'Océanie sont les principales régions exportatrices.

Dans le cas des peaux de moutons, les pays en développement sont devenus importateurs nets à la fin des années 90 ; la croissance la plus rapide a eu lieu en Proche-Orient et en Extrême-Orient. Les disponibilités exportables nettes de peaux de chèvres des pays en développement ont fléchi graduellement depuis la fin des années 80 par suite de l'augmentation du taux de transformation intérieur, ce qui fait qu'ils sont devenus importateurs nets.

Par contre, les pays développés, qui étaient importateurs nets de peaux de moutons au milieu des années 80 (moyenne 1986-1988), sont devenus exportateurs nets pendant la période à l'étude.

Notes du Tableau VI

La production mondiale de cuirs lourds préparés, à l'inverse de la baisse poursuivie à long terme, a augmenté entre la fin des années 80 et la période 2004-2006, en accord avec une augmentation de presque 13 pour cent de la production mondiale de chaussures à dessus en cuir. La principale région productrice est l'Extrême-Orient, où la production a connu une forte expansion, surtout en Chine, pays qui est devenu le principal producteur de chaussures en cuir. La production de cuirs lourds préparés des régions développées a continué à diminuer dans la mesure où les principaux pays développés diminuaient le tannage de cuirs lourds pendant la période à l'étude.

La croissance soutenue des activités de tannage dans les pays en développement se traduit principalement par un accroissement de la production de cuirs préparés légers de bovins. Alors que la production mondiale a augmenté de 47 pour cent, les pays en développement ont accru leur production de 97 pour cent, portant leur part dans le tannage de ce type de cuirs à plus de 61 pour cent du total. La croissance la plus rapide a eu lieu en Extrême-Orient. Les régions développées dans leur ensemble ont réduit le tannage de cuirs légers de bovins.

La production mondiale de cuirs de moutons et de chèvres a augmenté de 25 pour cent. Comme pour le cuir léger de bovins, la production de cuirs de moutons et de chèvres des pays en développement a augmenté sensiblement et leur part dans la production totale est passée de 54 à 78 pour cent. Les gains les plus forts en pourcentage ont été enregistrés en Proche-Orient (4,9 pour cent par an). Le tannage des peaux d'ovins et de caprins a baissé dans les pays développés.

Notes du Tableau VII

Le volume du commerce de cuirs légers de bovins a été multiplié par quatre (7,5 pour cent par an) durant la période à l'étude, tandis que les exportations de cuirs d'ovins et de caprins ont augmenté de 28 pour cent (1,5 pour cent par an) et que le commerce de cuirs lourds a augmenté de 85 pour cent (3,9 pour cent par an).

La part des pays en développement dans les expéditions de cuirs légers de bovins est passée de 54 pour cent à 68 pour cent et la leur part dans le commerce du cuir d'ovins et de caprins est augmentée de 42 pour cent à 60 pour cent. L'Extrême-Orient est la principale région exportatrice de cuirs légers de bovins.

Les expéditions de cuirs légers de toutes natures ont augmenté dans la plupart des régions développées.

Notes du Tableau VIII

La production mondiale de chaussures à dessus en cuir dépasse maintenant 4 480 millions de paires, du fait d'une augmentation de près de 13 pour cent durant la période à l'étude. Dans les pays en développement, la production a augmenté de près de 103 pour cent par suite des investissements effectués dans les installations de transformation. La part des pays en développement dans la production mondiale est passée de 43 à 77 pour cent. Comme dans le cas des cuirs préparés, c'est en partie en Amérique latine, mais surtout dans la région Extrême-Orient que l'expansion de l'industrie de la chaussure en cuir a été le plus marquée. La production a baissé dans toutes les régions développées.

Le commerce mondial des chaussures à dessus en cuir a connu une forte expansion annuelle de près de 4,7 pour cent. Les expéditions de pays en développement sont celles qui ont progressé le plus vite – 7,4 pour cent par an - et leur part dans les exportations mondiales est passé de 50 pour cent à 76 pour cent. Ce sont les pays d'Asie qui ont le plus bénéficié de cette expansion, par suite des progrès industriels dans plusieurs d'entre eux. L'Europe, qui détenait environ 90 pour cent du marché mondial d'exportation des chaussures en cuir à la fin des années 60, a perdu des parts de marché au profit de l'Extrême-Orient au cours des 30 années suivantes. A l'heure actuelle, l'Extrême-Orient détient 69 pour cent du marché mondial et l'Europe 23 pour cent.

La part des pays en développement dans la consommation de chaussures en cuir est passée de 30 pour cent à la fin des années 80 à 45 pour cent. Au niveau mondial, la consommation par habitant a baissé légèrement, mais dans les pays en développement elle est passée de 0,3 à 0,4 paires. En Extrême-Orient et en Amérique latine, les achats par habitant ont augmenté, tandis qu'en Afrique, la consommation est restée constante. Dans les pays développés, la consommation de chaussures en cuir par habitant a augmenté dans toutes les régions, à l'exception des pays de l'ex-URSS où elle a fortement chuté.

Notes du Tableau IX

Les chiffres de ce tableau sont des estimations assez grossières, mais ils n'en mettent pas moins en lumière l'évolution des utilisations du cuir pour différents produits finis. A l'échelle mondiale, la part des cuirs légers de bovins servant à la fabrication des dessus de chaussures, principale utilisation finale, semble avoir plafonné à environ 48 pour cent. La part des cuirs légers de bovins servant à la fabrication de chaussures a diminué en raison de l'importance croissante d'autres utilisations du cuir, essentiellement pour l'habillement et l'ameublement. Si l'on tient compte aussi des peaux de moutons et de chèvres, moins de la moitié de la production mondiale totale de cuirs préparés entre dans la fabrication de chaussures.

1) Les chiffres indiqués peuvent différer légèrement du total, certains "autres pays en développement" n'étant pas indiqués séparément

Notes du Tableau X

Ce tableau met en lumière certains aspects significatifs de l'évolution de la valeur des exportations du secteur des cuirs, peaux et cuirs préparés. Dans les pays en développement, la valeur totale des expéditions de tous les types de cuirs et peaux bruts a augmenté, mais la part de ces pays dans les exportations mondiales de matières premières a baissé semble avoir plafonné à environ 12,7 pour cent. Quelque 83 pour cent de la valeur des exportations internationales des cuirs et peaux bruts sont attribuables à l'Amérique du Nord, l'Europe et l'Océanie.

La valeur du cuir préparé exporté par les pays en développement, notamment ceux d'Extrême-Orient et d'Amérique latine, a considérablement augmenté. À la fin des années 80, les pays en développement ont tiré 2 768 millions de dollars de leurs ventes de cuirs, contre 10 251 millions de dollars durant la période 2004-2006. La part des pays en développement dans la valeur des exportations mondiales est passée de 37 à 55 pour cent.

La valeur des expéditions de chaussures en cuir des pays en développement est passée de 6 453 millions de dollars É.-U. à 15 910 millions de dollars É.-U. durant la période à l'étude. Le degré de pénétration des pays en développement dans le commerce international des chaussures de cuir, qui était de 38 pour cent à la fin des années 80, a grimpé jusqu'à 46 pour cent durant la période 2004-2006. L'Europe a conservé sa place de premier exportateur mondial de chaussures en cuir, en ce qui concerne la valeur de ses exportations, tandis que sa part du marché est tombée de 60 pour cent à 52 pour cent.

Les pays en développement ont connu une augmentation de leurs recettes globales d'exportations tirées des cuirs et peaux bruts, des cuirs préparés et des chaussures en cuir, qui sont passés de 9 800 millions de dollars É.-U. à 26 800 millions de dollars É.-U. pendant la période à l'étude, tandis que leur part du secteur total est passée de 33 à 46 pour cent. Cependant, les variations régionales sont considérables. L'Extrême-Orient est devenu de loin la première région exportatrice parmi les pays en développement en raison des progrès accomplis dans le domaine de la transformation et de la fabrication. La part relative du Proche-Orient et de l'Afrique dans les exportations totales a baissé, comme celle de chaque pays développé, à l'exception de la zone de l'ex-URSS.

Notes du Tableau XI

Le Tableau XI met en relief l'importance du commerce international des cuirs et peaux (dans les trois formes de traitement du cuir) comparée à celle d'autres produits agricoles. La valeur des exportations de cuirs et peaux, bruts et transformés, et des chaussures en cuir atteint environ 54 milliards de dollars É.-U. Ces chiffres placent les cuirs et peaux parmi les articles les plus importants dans les échanges internationaux.

1/ Salados en húmedo para bovinos, secos sin lana para ovinos y caprinos

2/ Teóricamente, el comercio neto a nivel global deberá ser igual a cero, los balances restantes se deben a discrepancias estadísticas

3/ Aunque una cierta cantidad de cueros de ganado ovino y caprino se destina a los calzados, por razones de simplificación, los balances sobre zapatos de cuero sólo se han ilustrado frente a la parte del cuadro relativa a los bovinos.

Nota: - significa Exportaciones netas, + signifiical Importaciones netas

Notas al Cuadro I

El Cuadro I presenta, en forma integrada, datos relativos a la producción, el comercio y la disponibilidad aparente de cueros y pieles en las diversas etapas de elaboración, en todo el mundo y en los dos principales grupos de países, durante el período 2004-2006.

De una cabaña mundial de bovinos de unos 1 560 millones de cabezas se obtuvieron aproximadamente 6,1 millones de toneladas de cueros sin curtir, salados húmedos. El peso unitario medio por pieza fue de 18,3 kg (véase también el Cuadro II). La producción de cuero grueso ascendió a 500 200 toneladas, mientras que se produjeron 13 832 millones de pies cuadrados de cuero ligero, incluido el cuero dividido. Alrededor del 48 por ciento de este cuero se empleó en la fabricación de 4 487 millones de pares de zapatos con palas de cuero, utilizando aproximadamente 6 730 millones de pies cuadrados (véase también el Cuadro IX). El 52 por ciento restante se destinó a otros usos finales, sobre todo prendas de vestir, muebles y artículos de viaje, en particular bolsos.

Se obtuvieron 657 000 toneladas de pieles sin curtir, peso en seco, de una cabaña mundial de 1 893 millones de ovinos y caprinos. Esta materia prima se transformó en 4 689 millones de pies cuadrados de curtidos de ovinos y caprinos, es decir unos 7,1 pies cuadrados por kg de piel sin curtir. Aunque parte de la piel de ovino se utilizó para forros de zapatos y parte de la piel de caprino para palas de zapatos, la mayor parte de estos curtidos se destinó a la fabricación de una gran variedad de artículos de cuero, desde prendas de cuero hasta correas de reloj.

La evolución registrada en los diversos niveles de elaboración se describe en las notas a los Cuadros II a X que figuran a continuación.

Cuadro II: Pieles y cueros sin curtir: factores que determinan el nivel de producción, 2004-2006

1/ Las cifras ilustradas pueden diferir ligeramente de la suma total, debido a la presencia de "otros países en desarrollo" no registrados por separado.

Notas al Cuadro II

Los factores determinantes de la producción de cueros y pieles sin curtir más importantes son la población ganadera, la tasa de entresaca y el peso de los cueros y pieles. Mientras que los países en desarrollo poseen aproximadamente el 79 por ciento de la cabaña bovina mundial, producen el 67 por ciento de la producción mundial de cueros en piezas, lo que representa una mejora respecto a la situación de final de los años ochenta. Habida cuenta de que el peso medio por pieza es inferior en los países en desarrollo, éstos representaron solamente el 60 por ciento de la producción total (véase el Cuadro III). La mayor disparidad entre cabaña y producción de cueros de bovinos se registra en África, que representa más del 11 por ciento de la cabaña mundial, pero sólo el 4,7 por ciento de la producción de cueros en peso.

Con respecto a las pieles de ovinos, la situación de los países en desarrollo es más favorable. Estos países poseen el 67 por ciento de la cabaña mundial de ovinos y representan la misma proporción del número de pieles de ovinos producidas mundialmente. No obstante, expresada en peso, la diferencia entre la producción de pieles de ovinos de los países en desarrollo y los países desarrollados es también mayor en este caso.

Con respecto a las pieles de caprinos, la proporción de la cabaña y de la producción de los países en desarrollo es, en ambos casos, de aproximadamente el 95 por ciento. Sin embargo, existen considerables discrepancias en la productividad de los rebaños de caprinos de los países en desarrollo, y la tasa de entresaca varía entre el 27 y el 56 por ciento.

Notas al Cuadro III

Entre final de los años ochenta y el período 2004-2006, la producción mundial de cueros y pieles de bovinos aumentó un 15 por ciento. La producción de los países en desarrollo ha seguido creciendo enérgicamente como consecuencia de la mejoras introducidas en la cría de ganado vacuno y la expansión de la producción de la carne, mientras que la de la mayoría de las regiones desarrolladas se ha reducido. América Latina y el Lejano Oriente ahora producen más que ninguna otra región.

La producción mundial de pieles de ovinos aumentó un 6 por ciento. Como en el caso de los cueros de vacuno, el crecimiento de la producción de los países en desarrollo ha sido superior.

La producción mundial de pieles de caprinos creció un 64 por ciento (un 3,2 por ciento al año) durante el período que se examina. La producción de los países en desarrollo, que dominan la producción de pieles de caprinos, aumentó un 69 por ciento, frente al 12 por ciento de la de los países en desarrollo.

Notas al Cuadro IV

A escala mundial, el 38 por ciento de la producción de cueros de bovinos sin curtir fue objeto de comercio internacional durante el período 2004-2006, lo que representa un aumento respecto al 37 por ciento de final de los años ochenta. Los envíos mundiales aumentaron un 21 por ciento (un 1,2 por ciento al año) y los países en desarrollo han aumentado sus exportaciones a un ritmo más rápido que los países desarrollados. La proporción de la exportaciones mundiales de los países en desarrollo aumentó un poco durante el período que se examina.

La proporción de la producción de pieles de ovinos objeto de comercio internacional disminuyó del 43 por ciento registrado a final de los años ochenta al 41 por ciento del período 2004-2006. Oceanía es ahora la primera región exportadora y representa el 37 por ciento del total mundial.

La proporción de la producción de pieles de caprino que es objeto de comercio internacional disminuyó del 20 por ciento de final de los años ochenta al 4 por ciento del período 2004-2006, lo que indica un rápido crecimiento de la utilización en los países productores. Las exportaciones mundiales de pieles de caprino sin curtir disminuyeron un 6,4 por ciento al año, al mismo tiempo que se ha registrado un aumento de la producción. Los países en desarrollo, que es donde la capacidad de curtido aumentó más rápidamente, redujeron sus exportaciones de pieles sin curtir en aproximadamente un 71 por ciento (un 7,5 por ciento al año). Las exportaciones de los países desarrollados se bajaron de un 38 por ciento (un 2,9 por ciento al año).

3/ Peso en seco

Nota: - significa Exportaciones netas, = Importaciones netas

Teóricamente, el comercio neto a nivel global debería ser igual a cero. Las restantes discrepancias se deben a imperfecciones estadísticas

Notas al Cuadro V

A principios de los años setenta los países en desarrollo se convirtieron en importadores netos de pieles y cueros de bovinos sin curtir, aunque al final de los años sesenta eran exportadores netos, con una cantidad de 165 000 toneladas. Las importaciones netas de los países en desarrollo aumentaron de las 484 000 toneladas a final de los años ochenta a 1 052 000 durante el período 2004-2006, lo cual refleja la expansión de la capacidad de curtido de la mayor parte de los países en desarrollo, pero sobre todo la de la región del Lejano Oriente, donde el rápido crecimiento de las importaciones netas fue consecuencia sobre todo del aumento de las necesidades de importación de los países recientemente industrializados, que cuentan con recursos propio de material primas muy limitadas. Algunos países productores de cuero curtido con abundantes recursos de materia prima, como la India, Pakistán y Tailandia, han comenzado a importar también cueros sin curtir en cantidades considerables. América del Norte y Oceanía son las primeras regiones exportadoras.

En lo que respecta a las pieles de ovinos, los países en desarrollo se han convertido en importadores netos al final de los años noventa; la evolución más rápida fue la registrada en el Cercano Oriente y el Lejano Oriente. Las disponibilidades exportables netas de pieles de caprino de los países en desarrollo se han reducido gradualmente desde final de los años ochenta, lo que refleja una tasa más elevada de elaboración interna; los países en desarrollo son importadores netos.

Por el contrario, los países desarrollados han pasado de ser importadores netos de pieles de ovinos sin curtir a mitad de los años ochenta (promedio 1986-1988) a exportadores netos en el período que se examina.

Notas al Cuadro VI

Contrariamente a la tendencia declinante que ha sido aparente por un número de años, la producción global de cuero grueso aumentó de final de los años ochenta al período 2004-2006, de acuerdo con un aumento de aproximadamente 13 por ciento en la producción de zapatos de cuero. La principal región productora es el Lejano Oriente, donde la producción creció considerablemente, particularmente en China, país que se ha convertido en el mayor productor de zapatos de cuero. La producción de cuero grueso continuó declinando en las regiones desarrolladas ya que los principales países desarrollados redujeron el curtido de cuero grueso durante el período que se examina.

El continuo crecimiento de las actividades de curtido en los países en desarrollo se manifiesta en el aumento de la producción de cuero ligero de bovinos. Mientras que la producción mundial tuvo un aumento de un 47 por ciento, los países en desarrollo aumentaron su producción un 108 por ciento, con lo cual su participación en el curtido de este tipo de cueros pasó a más de un 61 por ciento. La evolución más rápida fue la registrada en el Lejano Oriente. Las regiones desarrolladas en su conjunto redujeron el curtido de este tipo de cuero.

La producción mundial de curtidos de ovinos y caprinos tuvo un aumento de un 25 por ciento. Como ocurrió en el caso del cuero ligero de bovinos, la producción de curtidos de ovinos y caprinos de los países en desarrollo se incrementó marcadamente y su participación en la producción total pasó del 54 al 78 por ciento. Los aumentos más fuertes, en porcentaje, correspondieron al Cercano Oriente (un 4,9 por ciento al año). La actividad de curtición de las pieles de ovinos y caprinos disminuyó en los países desarrollados.

Notas al Cuadro VII

El comercio de cuero ligero de bovino se cuadruplicó (un 7,5 por ciento al año) durante el período que se examina, mientras que las exportaciones de curtidos de ovinos y caprinos aumentaron aproximadamente un 28 por ciento (un 1,5 por ciento al año) y el comercio de cuero grueso aumentó de un 85 por ciento (3,9 por ciento por año).

La parte de los países en desarrollo en los envíos de cuero ligero de bovino pasó del 54 al 68 por ciento, pero su parte en el comercio de curtidos de ovinos y caprinos aumentó del 42 al 60 por ciento. El Lejano Oriente es el principal exportador de cuero ligero de bovinos.

Los envíos de cuero ligero procedente de todos los tipos de cueros y pieles aumentaron en la mayoría de las regiones desarrolladas.

Notas al Cuadro VIII

La producción mundial de zapatos con palas de cuero actualmente supera los 4 480 millones de pares, y se ha incrementado aproximadamente de un 13 por ciento durante el período que se examina. En los países en desarrollo la producción aumentó un 103 por ciento, debido a las inversiones en su capacidad manufacturera. La proporción de la producción mundial correspondiente a los países en desarrollo pasó del 43 al 77 por ciento. Como en el caso del cuero, los progresos más marcados en la industrial del calzado de cuero tuvieron lugar en la región del Lejano Oriente y, en menor medida, en América Latina. La producción descendió en casi todas las regiones desarrolladas.

El comercio mundial de zapatos con palas de cuero tuvo una notable expansión, con tasas de crecimiento anual próximas al 4,7 por ciento. El aumento más rápido fue el de los envíos de los países en desarrollo, con un 7,4 por ciento anual, y su parte en las exportaciones mundiales pasó del 50 al 76 por ciento. A los países de Asia correspondió la mayor parte de este aumento, debido a los progresos industriales de algunos países. A finales de los años sesenta, Europa tenía aproximadamente el 90 por ciento del mercado mundial de exportación de calzado, pero en los tres decenios sucesivos perdió su parte en el mercado a favor del Lejano Oriente. Ahora el Lejano Oriente tiene un 69 por ciento del mercado mundial, frente al 23 por ciento de Europa.

La participación de los países en desarrollo en el consumo de zapatos de cuero creció del 30 por ciento a final de los años ochenta al 45 por ciento. En el plano mundial el consumo per cápita descendió ligeramente, aunque en los países en desarrollo aumentó de 0,3 a 0,4 pares. En América Latina y en el Lejano Oriente el consumo anual per cápita aumentó, mientras que en África se mantuvo constante. En los países desarrollados el consumo per cápita de zapatos de cuero aumentó en todos los grupos excepto que en la región de la ex URSS, donde el consumo aparente disminuyó notablemente.

Cuadro IX: Manufacturas del cuero: cambios en la utilización del cuero en el calzado y en otros productos de cuero

	Disponibilidad aparente de cueros ligeros de bovinos	Disponibilidad aparente de cueros ligeros de ovinos y caprinos	Necesidad teórica de producción de zapatos de cuero 1/	Porcentaje de disponibilidad de cueros ligero de bovinos, para la producción de zapatos de cuero	Porcentaje de todos los cueros ligeros disponibles para la producción de calzado de cuero

Notas al Cuadro IX

Aunque las cifras contenidas en este Cuadro son estimaciones muy generales, proyectan cierta luz sobre la evolución reciente de la utilización del cuero para diversos productos finales. A nivel mundial, la proporción de cuero ligero de bovinos que se destina a la fabricación de palas de zapatos, principal uso final, parece haberse estancado aproximadamente en 48 por ciento. La parte del cuero ligero de bovinos destinada a zapatos de cuero disminuyó debido a que aumentaron otros usos del cuero curtido, sobre todo en la confección y la tapicería. Si se tienen en cuenta también las pieles de ovinos y caprinos, menos de la mitad de la producción mundial de cuero curtido se destina al calzado.

Notas al Cuadro X

Este cuadro ilustra algunas características importantes de la evolución del comercio de exportación en el sector de los cueros, pieles y curtidos. Aunque aumentó el valor agrado de los envíos de los países en desarrollo de todo tipo de cueros y pieles sin curtir, su parte en las exportaciones mundiales de material sin curtir se mantuvo constante a circa 12,7 por ciento. Alrededor de un 83 por ciento del valor de comercio internacional de exportación de cueros y pieles sin curtir corresponde a América del Norte, Europa y Oceanía.

El valor del cuero exportado por los países en desarrollo ha crecido notablemente, sobre todo en el caso del Lejano Oriente y de América Latina. Los países en desarrollo ingresaron 2 768 millones de dólares EE.UU. a final de los años ochenta, frente a 10 251 millones de dólares EE.UU. durante el período 2004-2006. La proporción correspondiente a los países en desarrollo en el valor de las exportaciones mundiales aumentó del 37 al 55 por ciento.

El valor de los envíos de zapatos de cuero de los países en desarrollo en este sector aumentó de 6 453 a 15 910 millones de dólares EE.UU. en el período que se examina. La penetración de los países en desarrollo en el mercado internacional de calzado de cuero aumentó del 38 por ciento de final de los años ochenta a un 46 por ciento durante el período 2004-2006. Europa conservó su posición de principal exportador mundial de calzado de cuero, en términos de valor, aunque su parte bajó del 60 al 52 por ciento.

El total de los ingresos obtenidos por los países en desarrollo de la exportación de cueros y pieles sin curtir, cuero y calzado de cuero, pasó de 9 800 a 26 800 millones de dólares EE.UU. en el período considerado y la parte de esos países en el total del sector subió del 33 al 46 por ciento. Sin embargo, se registran variaciones considerables según las regiones. El Lejano Oriente ha pasado a ser, con gran diferencia, la principal región exportadora entre los países en desarrollo, gracias a sus realizaciones en la elaboración y la manufacturación. La parte correspondiente al Cercano Oriente y a África en el total de las exportaciones ha disminuido, al igual que las de los países desarrollados, con la excepción de la región de la ex URSS.

Cuadro XI: Cueros, pieles, calzado de cuero: su significado en relación con el comercio de otros productos, promedio 2003-2005

Notas al Cuadro XI

El Cuadro XI ilustra la importancia que tiene el comercio en el sector de la elaboración de cueros y pieles, en comparación con otros productos. El valor de las exportaciones de cueros y pieles in curtir y elaborados y de los zapatos de cuero asciende a casi 54 000 millones de dólares. Estas cifras sitúan a los cueros y pieles entre los productos más importantes del comercio internacional.

The 2008 edition of the *World statistical compendium for raw hides and skins, leather and leather footwear 1988-2007* is the twelfth issue in a series that FAO started publishing in 1980 in response to the growing demand for coherent statistical data on hides, skins and derived products. This issue provides up-to-date information to 2007 on this heterogeneous group on commodities for both developed and developing countries. It is based on the same integrated approach used in the previous compendia, which compares figures for the subsequent stages of processing from raw hides to finished products for about 190 countries. Brief analytical notes highlighting the salient features and changes that have taken place in the sector over time have also been included.

L'édition de 2008 du *Recueil de statistiques mondiales sur les cuirs et peaux bruts et préparés et les chaussures de cuir 1988-2007* est la douzième version d'une série que la FAO a commencé à publier dès 1980 en réponse à une demande croissante de données statistiques cohérentes sur le secteur des cuirs, peaux et produits dérivés. Elle contient une mise à jour des données sur ce groupe de produits jusqu'en 2007, pour les pays développés et pour les pays en développement. On a utilisé la même méthode intégrée que dans le recueil précédent, c'est-à-dire qu'on a essayé, pour environ 190 pays, de présenter des données chiffrées sur les différentes phases de traitement, du cuir brut aux produits finis. De brèves notes mettent en exergue les faits saillants et les changements intervenus dans ce secteur.

La edición de 2008 del *Compendio estadístico mundial de cueros y pieles sin curtir, cueros y calzado de cuero 1988-2007* es la duodécima de una serie que la FAO empezó a publicar en 1980, como respuesta a la creciente demanda de datos estadísticos fiables en el sector de los cueros, pieles y productos derivados. El presente número contiene información actualizada hasta 2007 sobre este grupo heterogéneo de productos tanto para los países en desarrollo como para los desarrollados. Se ha adoptado el mismo enfoque integrado que en los compendios anteriores, en los que se comparan las diferentes etapas de elaboración, desde el cuero sin curtir hasta el producto terminado, en unos 190 países. Se han incluido también breves notas analíticas en las que se presentan las principales características del sector correspondiente, y los cambios registrados en el mismo, en el transcurso del tiempo.
