

Estimación de los componentes “Plantados” y de “Regeneración natural asistida” de los Bosques semi-naturales

(Sírvase hacer referencia a la Sección 2, Documento de Trabajo FP35)

En las primeras filas de la tabla 2a, figuran las cifras absolutas suministradas en la tabla T4 del Informe nacional sobre los Bosques semi-naturales. Sírvase suministrar el porcentaje (%) del componente plantado y el porcentaje del componente de regeneración natural asistida de los Bosques semi-naturales durante los años 1990, 2000 y 2005²⁵ (Sus datos figurarán en la sección amarilla de la tabla).

Tabla 2a: FRA 2005 porcentaje del área de los Bosques semi-naturales y estimaciones de los componentes “Plantados” y de “Regeneración natural asistida” de los Bosques semi-naturales

Año	1990			2000			2005

- El experto en Bosques plantados hará una lista de documentos de referencia en la sección bibliográfica.

²⁵ La última fila de la Tabla 4a debe ser completada por el experto en Bosques plantados.

Las estimaciones de los componentes plantados y de regeneración natural asistida de los Bosques semi-naturales deben totalizar el 100%.

Estimación del componente plantado de los Bosques semi-naturales para fines productivos y de protección

(Sírvase hacer referencia a la Sección 3, Documento de Trabajo FP35)

En la tabla 2b, sírvase estimar el porcentaje del área que abarca el componente plantado de los Bosques semi-naturales²⁶ destinado a fines de producción y de protección en los años 1990, 2000, 2005. Sus datos figurarán en la sección amarilla.

Tabla 2b: componente plantado de los Bosques semi-naturales para fines productivos y de protección

	100		100	100		100	100		100

Fuente: El experto en Bosques plantados hará una lista de los documentos de referencia en la sección bibliográfica.

²⁶ Las estimaciones sobre los bosques para fines productivos y de protección deben totalizar el 100%.

Informe sobre el IMA (Incremento Medio Anual), la duración del ciclo de rotación, el rendimiento del volumen de aprovechamiento, y la distribución por clase de edad de las 10 especies principales del componente plantado de los Bosques semi-naturales (para la producción y para la protección) y de los bosques de plantaciones (para la producción y la protección).

(Sírvase hacer referencia a la Sección 5, del Documento de Trabajo FP35)

En las tablas 3 (a, b, c, d), sírvase suministrar los porcentajes de las 10 especies principales utilizadas en su país **sólo para el año 2005**.

En la tabla 3a: Sírvase suministrar las 10 especies principales para el **componente plantado de los Bosques semi-naturales para la producción**

En la tabla 3b: suministre las 10 especies principales del **componente plantado de los Bosques semi-naturales para la protección**

En la tabla 3c: suministre las 10 especies principales de los **Bosques de plantaciones para la producción**

En la tabla 3d: suministre las 10 especies principales en los **Bosques de plantaciones para la protección**

En cada tabla, sírvase agrupar las especies restantes dentro de la clasificación 11 denominada “Otros”.

El total de los porcentajes para las 11 clasificaciones debe sumar el 100%.

Sírvase suministrar los mejores datos en absoluto acerca de cada una de las especies en lo que se refiere al: Incremento Medio Anual (IMA), la duración del ciclo de rotación y el rendimiento del volumen de aprovechamiento.

Finalmente suministre una estimación porcentual (%) de la distribución por edad. **La distribución por edad debe sumar el 100%.**

Tabla 3a: Componente plantado de los bosques semi-naturales para la producción. Composición de las especies (%), Incremento Medio Anual (m³/ha/año), Duración del ciclo de rotación (años), rendimiento del volumen de aprovechamiento (m³/ha) y distribución por clase de edad (%). Notas: La clase 30-40 incluye todas las clases de edad 31 y más. La distribución de edades en eucalipto es una estimación de la estructura de edades practicada para el año 2001.

La estructura de edades en *Populus* spp. se basa en inventarios recientes de existencias (2003-2004) en las dos principales regiones del país en las que están establecidas estas plantaciones (VI y VII Regiones, con ¾ partes de la superficie total plantada nacional con *Populus* spp., que asciende a aproximadamente 6.000 ha).

(**) La información para Acacia, corresponde a las especies *A. melanoxylon* y *A. dealbata*. La mayor superficie plantada en acacias corresponde a *A. saligna*, para uso forrajero en zonas semiáridas (Norte Chico de Chile).

Tabla 3d: Bosques de plantaciones para la protección. Composición de las especies (%), Incremento Medio Anual (m³/ha/año), Duración del ciclo de rotación (en años), Rendimiento del volumen de aprovechamiento (m³/ha) y distribución por clase de edad (%). Sus datos figurarán en la sección amarilla.

Notas:

- ❖ Las plantaciones de propiedad pública están en su gran mayoría bajo la administración del servicio forestal nacional (Corporación Nacional Forestal, CONAF) y forman parte de algunas Reservas Forestales Nacionales (una de las categorías del Sistema de Áreas Silvestres Protegidas del Estado, SNASPE).
- ❖ La propiedad de las plantaciones forestales en manos de compañías o empresas que se informan representan a los grandes holdings forestales (dos: Arauco y CMPC) y otras grandes empresas. En total suman unas siete compañías.
- ❖ El segmento pequeños propietarios, comprende en verdad, lo que en Chile se denomina PYMEs (pequeños y medianos propietarios o empresas).

Fuentes:

- FAO 2004/5, Actualización de la Evaluación de los Recursos Forestales Mundiales al 2005, Informe Nacional
- El experto en bosques plantados hará una lista de los documentos de referencia en la sección bibliográfica.

Nota:

Para determinar los %, se toman como referencia los datos de consumo de madera en trozas en la industria forestal (m³ s.s.c.) de los cuadros 3.1 y 3.2 de las Estadísticas Forestales. En el rubro “No especificado...” se incluyen los rubros tableros y chapas, trozas aserrables de exportación, trozas pulpables de exportación, astillas y otros (ej. debobinado para cajones). Para el rubro “Bioenergía industrial” no se cuenta con la información precisa; se utiliza el dato sobre consumo de madera en trozas, particularmente el destinado a ser consumido como leña, en toneladas, transformado a metros cúbicos (con base en INFOR, 1992. Estudio del Balance de Energía, para Comisión Nacional de Energía).

Para favorecer la transparencia en materia de referencias, sírvase hacer una lista de todos los documentos que se demostraron apropiados para completar la información y los datos de este cuestionario de conformidad con la lista estándar suministrada en la sección bibliográfica del Documento de Trabajo 35.

Source: Planted Forests Specialist to list reference documents in the references section : No source for this breakdown, but the method of deriving the semi-natural category for FRA 2005 (described in UK report) implies that the woodland will normally be “protective”, as this includes provision of all services, including recreation and landscape objectives.

²⁹ Estimates of Productive and Protective purposes must tally to 100%

Report MAI, rotation length, harvest volume yield, and age classes distribution for the top10 species in the Planted component of Semi-Natural Forests (Productive and Protective) and Plantation Forests (Productive and Protective)

(Refer to **Section 5**, Working Paper FP35)

In tables 3 (a, b, c, d), **for year 2005 only**, please provide percentages of the top ten species used in your country.

In table 3a: Provide the top 10 species for **Productive Planted component of Semi-Natural Forests**

In table 3b: Provide the top 10 species for **Protective Planted component of Semi-Natural Forests**

In table 3c: Provide the top 10 species for **Productive Plantation Forests**

In table 3d: Provide the top 10 species for **Protective Plantation Forests**

For each table, please group other remaining species in class 11 named “Other”.

The total of percentages for the 11 classes must tally to 100%

For each species reported please provide best absolute data for Mean Annual Increment, Rotation Length and Harvest Volume.

Finally provide an estimate of the age distribution in %.

The Age distributions must tally to 100%.

Total	100																	

Source: Planted Forests Specialist to list reference documents in the references section : Increment and rotation length from Forest Industry Yearbook 1998, except for Sycamore (assumed to be same as Birch, as in Yield Models for Forest Management). Harvest volume yield estimated as volume at end of rotation, using rotation lengths quoted and relevant tables from Forest Yield software 2005, for no-thinning management regime, based on Yield Models for Forest Management.

Age class distribution was based on planting year decades in Table 10a of GB National Inventory 1995-99 for High Forest Category 1; this category is the closest in National Inventory outputs to FRA productive plantation and has a similar total (1.85 million ha). The “mixed” categories were included in “other” here. Figures for 1991-1999 were scaled up to give planting estimates for the full decade, but no adjustment was made to earlier decades for additional areas harvested between the Inventory date and the end of the decade. This gave ages at 2000; no adjustment was made to roll this forward to 2005, and the decade 0-10 was assumed evenly split between 0-5 and 5-10 for each species.

Total	100																		

Source: Planted Forests Specialist to list reference documents in the references section : No source for this breakdown. These protective plantations are not identified in the Inventory. Much of the area planted recently is likely to be mixed broadleaves, mainly of native species, with the main species as footnoted for Table 3b above.

Estimate of Ownership for Planted Forests

(Refer to **Section 6**, Working Paper FP35)

We request you to provide in tables 4 (a,b,c,d), the breakdown of ownership in “%” for: Planted components of Semi-Natural Forests (Productive and Protective) and Plantation Forests (Productive and Protective).

The total percentages of ownership categories must tally to 100%

Table 4a: Planted component of Semi-Natural Forests Productive. Your new data inputs

Reference year	1990				2000				2005				
Planted components of Semi-Natural Forests Productive	Calculated in Table 2b (%)												
	0				0				0				
	Ownership (%)												
Ownership	Public	Private Corporate	Small holders	Other	Total	Public	Private Corporate	Small holders	Other	Total	Public	Private Corporate	Small holders
					100					100			

Source: Planted Forests Specialist to list reference documents in the references section : (No area)

Table 4b: Planted component of Semi-Natural Forests Protective. Your new data inputs

Reference year	1990				2000				2005				
Planted components of Semi-Natural Forests Protective	Calculated % in Table 2b (%)												
	88				211				264				
	Ownership (%)												
Ownership	Public	Private Corporate	Small holders	Other	Total	Public	Private Corporate	Small holders	Other	Total	Public	Private Corporate	Small holders
	15	15	70	0	100	15	15	70	0	100	15	15	70

Source: Planted Forests Specialist to list reference documents in the references section : No source for this breakdown. Other set as zero, as zero total in UK report for FRA. For 1990, public % estimated based on Forestry Commission proportions of categories contributing to semi-natural estimate in UK report for FRA, rounded up for unknown amount in other public ownership. Arbitrary split between corporate and smallholders, noting the split in Table 4c, and expecting that the share might be expected to be higher for this category. For broadleaved planting since 1990, less than 10% has been FC new planting and restocking; adding in other public and FC planting in Caledonian pinewood may give a similar share to 1990, so % shares are rolled forward unchanged.

Table 4c: Productive Plantation Forests. Your new data inputs

Reference year	1990					2000					2005				
Productive Plantation	Reported Area from Table 1 (1000 ha)														
	1862					1914					1902				
	Ownership (%)														
Ownership	Public	Private Corporate	Small holders	Other	Total	Public	Private Corporate	Small holders	Other	Total	Public	Private Corporate	Small holders	Other	Total
	41	16	43	0	100	36	17	47	0	100	34	18	48	0	100

Source: Planted Forests Specialist to list reference documents in the references section : No source for this breakdown for productive plantations. As this category makes up about 70% of total UK forest, the % breakdowns for all forest have been used to estimate this split. Public/private/other split from UK report for FRA Table 2 and rolled forward to 2005 using similar method. Private divided between corporate and smallholders using relative proportions from National Inventory 1995-99 for all years, taking “personal” to be equivalent to this category “smallholders” and all other non-public categories to be equivalent to “corporate” (but noting that some of these “personal” holdings are very large).

Table 4d: Protective Plantation Forests. Your new data inputs

Reference year	1990					2000					2005				
Protective Plantation	Reported Area from Table 1 (1000 ha)														
	15					20					22				
	Ownership (%)														
Ownership	Public	Private Corporate	Small holders	Other	Total	Public	Private Corporate	Small holders	Other	Total	Public	Private Corporate	Small holders	Other	Total
	50	20	30	0	100	50	20	30	0	100	50	20	30	0	100

Source: Planted Forests Specialist to list reference documents in the references section: No source for this breakdown for protective plantations. The text describing the estimation of the total, in UK report for FRA table 4, notes that this includes plantations to stabilise sandy soils, shelterbelts for farms, and planting for recreation, particularly in community forests. The first of these is likely to have a high proportion public, the second mainly smallholders, and the third will be a mix of all three categories. This influenced the % split shown, but the figures shown are arbitrary.

Estimate of Predominant purpose for Planted Forests

(Refer to Section 7, Working Paper FP35)

In Questionnaire tables 5 (a, b), for productive and protective categories, please estimate, in %³⁰ of area, the **Predominant purpose** for:

Planted components of Semi-Natural Forests (table 5a), for figures calculated in table 2b

Plantation Forests (table 5b), for figures provided in table 1.

Table 5a: Detailed Purpose Estimates for Planted component of Semi-Natural Forests by % of Area. Your new data inputs

				Non-ind-Fuelwood	0	0	0
Total					100	100	100

Sources:

- FAO 2004/5, Global Forest Resources Assessment update 2005, National Country Report

• Planted Forests Specialist to list reference documents in the references section: No source for either of these breakdowns. The main production objective in the UK is normally to produce sawlogs, although pulpwood and fuelwood may also be produced (e.g. from thinnings). The definition of High Forest Category 1 (used for table 3c) is that the stands are, or could become, capable of producing wood of a size and quality suitable for sawlogs. The method of deriving the protective plantation category for FRA 2005 (described in UK report) implies splits between environmental and recreation as indicated

For transparency in referencing please list below all documents appropriate to completion of information and data for this questionnaire in conformity with the standard list provided in references section of Working Paper 35

¹ The bottom row of table 4a to be completed by the Planted Forests Specialist.
Estimates of planted and assisted natural regeneration components of Semi-Natural Forests must tally to 100%

Section 3. Planted component of Semi-Natural Forests: Productive and Protective

Using the definitions below, classify the Planted component of Semi-Natural Forests into Productive and Protective purposes

Definition

- **Productive** Planted component of Semi-Natural Forests
Established through planting or seeding mainly for production of wood or non wood goods.
- **Protective** Planted component of Semi-Natural Forests
Established through planting or seeding mainly for provision of services.

Explanatory notes. Includes soil and water protection; conservation of biological diversity; social, cultural and other services.

Questionnaire input

Estimation of Planted component of Semi-Natural Forests to Productive and Protective purposes

In Questionnaire table 2b estimate in % the area of Planted component of Semi-Natural Forests² allocated to Production and Protection purposes for years 1990, 2000, 2005. Your new data inputs

Section 5. Species, MAI, rotation length, harvest volume yield and age classes distribution

This information is important for future policy, planning and management.

Questionnaire input

Report MAI, rotation length, harvest volume yield, and age classes distribution for the top10 species in the Planted component of Semi-Natural Forests (Productive and Protective) and Plantation Forests (Productive and Protective)

In Questionnaire tables 3 (a, b, c, d), for year 2005 only, please provide percentages of the top ten species used in your country.

In Questionnaire table 3a: Provide the top 10 species for Productive Planted component of Semi-Natural Forests

In Questionnaire table 3b: Provide the top 10 species for Protective Planted component of Semi-Natural Forests

In Questionnaire table 3c: Provide the top 10 species for Productive Plantation Forests

In Questionnaire table 3d: Provide the top 10 species for Protective Plantation Forests

For each table, please group other remaining species in class 11 named “Other”.

The total of percentages for the 11 classes must tally to 100%

For each species reported please provide best absolute data for Mean Annual Increment, Rotation Length and Harvest Volume.

Finally provide an estimate of the age distribution in %.

The Age distributions must tally to 100%.

Questionnaire table 3a: Productive Planted component of Semi-Natural Forests. Species composition (%), Mean Annual Increment ($m^3/ha/year$),
 Rotation Length (years), Harvest volume yield (m^3/ha) and age class distribution (%). Your new data inputs

Section 6. Ownership: supplement to FRA2005 data

Explanatory table E (below) reports the total forest area by ownership classes as reported by Table 2 (T2) of the FRA 2005 National Country Report.

Explanatory table E: Area of Forest by Ownership as reported in Table T2 of FRA 2005

FRA 2005 Categories	Area (1000 hectares)	
	Forest	
	1990	2000
Private ownership	1836	1431
Public ownership	20540	20160
Other ownership	0	0
TOTAL	22376	21591

Source: FAO 2004/5, GLOBAL FOREST RESOURCES ASSESSMENT UPDATE 2005,
NATIONAL COUNTRY REPORT

According to FRA ownership categories are defined as:

Private ownership

Land owned by individuals, families, private co-operatives, corporations, industries, private religious and educational institutions, pension or investment funds, and other private institutions.

Explanatory note

1. Private owners may be engaged in agriculture or other occupations including forestry.

Public ownership

Land owned by the State (national, state and regional governments) or government-owned institutions or corporations or other public bodies including cities, municipalities and villages.

Other ownership

Land not classified as Public or Private ownership.

Explanatory note

1. Includes land where ownership is not defined or unknown.

In the Planted Forest thematic study we have a further breakdown for Private Ownership into Corporate and Smallholders according to the definition:

Private ownership Corporate

Land owned by private companies, co-operatives, corporations, industries, private religious and educational institutions, pension or investment funds (generally large scale)

Private ownership Smallholders

Land owned by individuals or families (generally small scale)

Questionnaire input

Estimate of Ownership for Planted Forests

We request you to provide in Questionnaire tables 4 (a, b, c, d), the breakdown of ownership in “%” for: Planted components of Semi-Natural Forests (Productive and Protective) and Plantation Forests (Productive and Protective). The total percentages of ownership categories must tally to 100%

Questionnaire table 4a: Planted component of Semi-Natural Forests Productive. Your new data inputs

Section 7. Predominant purpose: supplement to FRA2005

FRA does not detail specific predominant purposes of forests. A more detailed breakdown on predominant purposes is needed for the Planted components of Semi-Natural Forests and Plantation Forests. Explanatory table F reported below shows the breakdown of predominant purposes by productive and protective categories.

Explanatory table F: Predominant purposes, definitions and abbreviations

FRA Purpose	Planted forests end use and definition	Abbreviation
Productive	Production of saw logs	Ind-Sawlog
	Production of chips, pulpwood and fibre for cellulose and paper	Ind-Pulpwood/Fiber
	Production of wood to be used as bio-energy on large scale	Ind-Bioenergy
	Production of Non wood products (Arabic gum, rubber, palm fibres, cork...) large scale	Ind-Non Wood Prod
	Production of wood for industrial uses but unspecified	Ind-Unspecified
Protective	Provision of protective services for soil, water, biodiversity (can include Non wood forest products on small scale)	Non-ind-Environmental
	Provision of social and cultural services (recreation, religious, amenity...)	Non-ind-Recreation
	Provision of unspecified services	Non-ind Unspecified
	Provision of wood for fuel on small scale (farmers, villages, rural communities)	Non-ind-Fuelwood

Source: Del Lungo, A., Carle, J.B., 2005 (present Paper)

Questionnaire input

Estimate of Predominant purpose for Planted Forests

In Questionnaire tables 5 (a, b), for productive and protective categories, please estimate, in %³ of area, the Predominant purpose for:
 Planted components of Semi-Natural Forests (table 5a), for figures calculated in table 2b
 Plantation Forests (table 5b), for figures provided in table 1.

³ Estimates of Predominant purpose must tally to 100% for each category

Questionnaire table 5a: Detailed Purpose Estimates for Planted component of Semi-Natural Forests by % of Area. Your new data inputs

Report MAI, rotation length, harvest volume yield, and age classes distribution for the top10 species in the Planted component of Semi-Natural Forests (Productive and Protective) and Plantation Forests (Productive and Protective)

(Refer to Section 5, Working Paper FP35)

In tables 3 (a, b, c, d), **for year 2005 only**, please provide percentages of the top ten species used in your country.

In table 3a: Provide the top 10 species for **Productive Planted component of Semi-Natural Forests**

In table 3b: Provide the top 10 species for **Protective Planted component of Semi-Natural Forests**

In table 3c: Provide the top 10 species for **Productive Plantation Forests**

In table 3d: Provide the top 10 species for **Protective Plantation Forests**

For each table, please group other remaining species in class 11 named “Other”.

The total of percentages for the 11 classes must tally to 100%

For each species reported please provide best absolute data for Mean Annual Increment, Rotation Length and Harvest Volume.

Finally provide an estimate of the age distribution in %.

The Age distributions must tally to 100%.

³² Estimates of Productive and Protective purposes must tally to 100%

Note:

Radiata pine and Douglas fir are the main plantation species used in New Zealand. No data for other species planted are available.

The average rotation length for Radiata pine in 2004 was 27.6 years; for Douglas fir it was 38.4 years.

The average harvest yield for Radiata pine was 460 m³/ha in 2004.

The MAI figures were calculated from the Total Recoverable Volume figures in the NEFD generalised yield tables.

The Minimum and Maximum harvest volume yields were also taken from the generalised yield tables at the given minimum and maximum rotation ages.

There are approx 20,000 hectares of hardwood grown on a short rotation basis. This will explain the wide range of rotation lengths for Hardwoods.

The East Coast Forestry Project (the area of Protective plantation) did not begin until 1992.

³⁹ Estimates of Predominant purpose must tally to 100% for each category

Note:

The figures for 2000 and 2005 reflect the approximately 20,000 hectares of short rotation hardwood plantations that have been established in both the North and the South Islands.

The percentage figures for the Protective plantation reflect the fact that production is not the first objective, but some Saw log-predominant production will be possible from those plantations. It is not possible to be more precise at this stage.

For transparency in referencing please list below all documents appropriate to completion of information and data for this questionnaire in conformity with the standard list provided in references section of Working Paper 35

AUSTRALIA

Note: In the questionnaire Australia only provided silvicultural parameters, ownership and end use data related to the figures on Plantation Area previously reported to FRA 2005

Table 3c

(a) The growth (MAI) and volume estimates were sourced from Ferguson et al. (2002) Plantation Wood Availability report 2001 to 2044. Bureau of Rural Sciences, Canberra

(b) The species age class distributions were sourced from Wood et al. (2001) Plantations of Australia. (Nb data as at end of 2000 includes plantings in year 2000).

(c) Age class was only collected and reported to age 60 years in Wood et al. (2001) Plantations of Australia 2001. All plantations greater than 60 years were summed together.

(d) An unknown age category was required due to not all plantation types being known at the time of the Plantations of Australia 2001 report.

(e) Eucalyptus pilularis and E. grandis were grouped and reported together in Wood et al. 2001, Plantations of Australia report.

Reference year: 2005

Top 10 species planted	%	Age class distribution (b)									
		2001 2005	1995 2000	1985 1995	1975 1984	1965 1974	1955 1964	1940 1954	before 1939

Notes:

(a) The growth (MAI) and volume estimates were sourced from Ferguson et al. (2002) Plantation Wood Availability report 2001 to 2044. Bureau of Rural Sciences, Canberra

(b) The species age class distributions were sourced from Wood et al. (2001) Plantations of Australia. (Nb data as at end of 2000).

(c) Age class was only collected and reported to age 60 years in Wood et al. (2001) Plantations of Australia 2001. These are now 5 years older so all plantations greater than

(d) An unknown age category was required due to not all plantation types being known at the time of the Plantations of Australia 2001 report.

(e) *Eucalyptus pilularis* and *E. grandis* were grouped and reported together in Wood et al. 2001, Plantations of Australia report.

In 2000, softwoods made up 63% of the total plantation area, known hardwoods were 26% and unknown species were 11%.

At the end of 2004 there were 58% softwood species and 42% hardwood species (NPI update 2005).

(f) For 2005 Table 2 assumes the 58% SWD and 42% HWD (includes the 11% other) and proportions within the HWD/SWD groupings stay the same as they were in 2000.

Other includes unknown species.

COUNTRY NAME: Bulgaria

Availability of FRA 2005 data on forest cover area

(Refer to **Section 1**, Working Paper FP35^{*})

Forest type

Table 1 has been derived from Table 4 (T4) of National Report for FRA 2005

Table 1: Area of Forest as reported in Table T4 of FRA 2005

FRA 2005 Categories	Surface (1000 ha)		
	Forest		
	1990	2000	2005
Primary	267	396	NDA
Modified Natural	2028	2046	NDA
Semi-Natural	992	885	NDA
Productive Plantation	21.9	30.7	NDA
Protective Plantation	18.6	17.0	NDA

Source: Derived from T4, in FAO 2004/5, Global Forest Resources Assessment update 2005,
National Country Report

According to the FRA 2005 definitions Planted Forests include the planted component of Semi-Natural Forests and both Productive and Protective Plantation Forests.

*FAO. 2005. Planted Forests and Trees Working Papers: Global Planted Forest Thematic Supplement to Forest Resources Assessment 2005. *Guidelines for National Reporting Tables for Planted Forests*, Working Paper FP35, Forest Resources Development Service, Forest Resources Division. FAO, Rome

Estimate of “Planted” and “Assisted Natural Regeneration” components of Semi-Natural Forests

(Refer to **Section 2**, Working Paper FP35)

Table 2a, in top rows, reports absolute figures provided in T4 of the National report for Semi-Natural Forests. Please provide the % planted component and % assisted natural regeneration component of Semi-Natural Forests for years 1990, 2000 and 2005⁴⁰ (Your new data inputs in yellow on table).

Table 2a: FRA 2005 area of Semi-Natural Forest classification and estimates of “Planted” and “Assisted Natural Regeneration” components of Semi-Natural Forests

- Planted Forests Specialist to list reference documents in the references section

⁴⁰ The bottom row of table 4a to be completed by the Planted Forests Specialist.

Estimates of planted and assisted natural regeneration components of Semi-Natural Forests must tally to 100%

Estimation of Planted component of Semi-Natural Forests to Productive and Protective purposes

(Refer to Section 3, Working Paper FP35)

In Table 2b estimate in % the area of Planted component of Semi-Natural Forests⁴¹ allocated to Production and Protection purposes for years 1990, 2000, 2005. Your new data inputs

Table 2b: Planted component of Semi-Natural Forests to Productive and Protective purposes

Year	1990			2000			2005		
Semi-Natural Forests Planted component	Relative figures (%)								
Estimates	Productive (%)	Protective (%)	Total (%)	Productive (%)	Protective (%)	Total (%)	Productive (%)	Protective (%)	Total (%)
	53	47	100	48	52	100	NDA	NDA	100

Source: Planted Forests Specialist to list reference documents in the references section

⁴¹ Estimates of Productive and Protective purposes must tally to 100%

Report MAI, rotation length, harvest volume yield, and age classes distribution for the top10 species in the Planted component of Semi-Natural Forests (Productive and Protective) and Plantation Forests (Productive and Protective)

(Refer to **Section 5**, Working Paper FP35)

In tables 3 (a, b, c, d), **for year 2005 only**, please provide percentages of the top ten species used in your country.

In table 3a: Provide the top 10 species for **Productive Planted component of Semi-Natural Forests**

In table 3b: Provide the top 10 species for **Protective Planted component of Semi-Natural Forests**

In table 3c: Provide the top 10 species for **Productive Plantation Forests**

In table 3d: Provide the top 10 species for **Protective Plantation Forests**

For each table, please group other remaining species in class 11 named “Other”.

The total of percentages for the 11 classes must tally to 100%

For each species reported please provide best absolute data for Mean Annual Increment, Rotation Length and Harvest Volume.

Finally provide an estimate of the age distribution in %.

The Age distributions must tally to 100%.

Unfortunately for this section we do not have any data. The organization of the forest management in Bulgaria is according to the forest types, but not according their functions. The data for rotation length, age structure, etc. are respectively for needle forests, broadleaf forests, forests for reconstruction, etc.

Estimate of Ownership for Planted Forests

(Refer to **Section 6**, Working Paper FP35)

According to Bulgarian Forestry Act all Semi-natural forests are state forests (100% state property). Semi-natural forests were and are not under restitution.

We request you to provide in tables 4 (a,b,c,d), the breakdown of ownership in “%” for: Planted components of Semi-Natural Forests (Productive and Protective) and Plantation Forests (Productive and Protective).

The total percentages of ownership categories must tally to 100%

Table 4a: Planted component of Semi-Natural Forests Productive. Your new data inputs

Plantation de protection			

Source: tableau T4, de la Mise à jour de l'Évaluation des ressources forestières mondiales 2005, FAO 2004/5,
Rapport par pays

Selon les définitions fournies par FRA 2005, les forêts plantées comprennent le composant planté des forêts semi-naturelles, et les plantations forestières destinées à la production ou à la protection.

*FAO. 2005. Documents de travail sur les forêts et les arbres plantés: Supplément thématique sur les forêts plantées mondiales à l'Évaluation des Ressources forestières 2005. Directives pour l'élaboration des tableaux nationaux d'informations sur les forêts plantées, Document de travail FP35, Service de la mise en valeur des ressources forestières, Division des ressources forestières. FAO, Rome.

Estimation du composant “planté” et du composant de “régénération naturelle assistée” des forêts semi-naturelles

(Veuillez consulter la **Section 2** du Document de travail FP35)

Les premières lignes du tableau 2a, montrent les chiffres absous fournis par le tableau T4 du rapport par pays sur les forêts semi-naturelles. Veuillez fournir le pourcentage (%) du composant planté et celui du composant de régénération naturelle assistée des forêts semi-naturelles au cours des années 1990, 2000 et 2005⁴³ (Vos données doivent figurer dans la section jaune du tableau).

Tableau 2a de FRA 2005 : pourcentage de la superficie des forêts semi-naturelles et estimations des composants “plantés” et de “régénération naturelle assistée” des forêts semi-naturelles

- L’expert en forêts plantées fera une liste des documents de référence dans la section bibliographique.

⁴³ La dernière ligne du tableau 4a doit être complétée par l’expert en forêts plantées.

Les estimations du composant planté et du composant de régénération naturelle assistée des forêts semi-naturelles doivent totaliser 100%.

Estimation du composant planté des forêts semi-naturelles de production et de protection

(Veuillez consulter la **Section 3** du Document de travail FP35)

Dans le tableau 2b veuillez faire une estimation du pourcentage de la superficie occupée par le composant planté des forêts semi-naturelles⁴⁴ destinées à la production et à la protection au cours de 1990, 2000 et 2005. Vos données doivent figurer dans la section jaune.

Tableau 2b: composant planté des forêts semi-naturelles destinées à la production et à la protection

Année	1990			2000			2005		
Composant planté des forêts semi- naturelles Estimations	Chiffres relatifs (%)								
	De production (%)	De protection (%)	Total (%)	De production (%)	De protection (%)	Total (%)	De production (%)	De protection (%)	Total (%)
	94	6	100	95	5	100	95	5	100

Source : l'expert en forêts plantées fera une liste des documents de référence dans la section bibliographique.

⁴⁴ Les estimations respectives des forêts de production et des forêts de protection doivent totaliser 100%.

Rapport AMA (Accroissement Moyen Annuel), durée du cycle de rotation, rendement du volume de récolte, et distribution par classe d'âge des 10 espèces principales du composant planté des forêts semi-naturelles (de production et de protection) et des plantations forestières (de production et de protection).

(Veuillez consulter la **Section 5**, du Document de travail FP35)

Veuillez fournir les pourcentages correspondant aux 10 espèces principales utilisées dans votre pays **en 2005** dans les tableaux 3 (a, b,c,d).

Veuillez fournir les 10 espèces principales du **composant planté des forêts semi-naturelles de production** dans le tableau 3a.

Veuillez fournir les 10 espèces principales du **composant planté des forêts semi-naturelles de protection** dans le tableau 3b.

Veuillez fournir les 10 espèces principales des **plantations forestières destinées à la production** dans le tableau 3c.

Veuillez fournir les 10 espèces principales des **plantations forestières destinées à la protection** dans le tableau 3d.

Dans chaque tableau, veuillez inscrire les espèces restantes dans la classification 11 “Autres”.

Le total du pourcentage de chacune des 11 classifications doit totaliser 100%.

Veuillez fournir les meilleures données possibles sur chacune des espèces en ce qui concerne: l'accroissement moyen annuel (AMA), la durée du cycle de rotation et le rendement du volume de récolte.

Finalement, veuillez fournir une estimation des pourcentages de distribution par classe d'âge. **La distribution par âge doit totaliser 100%.**

Tableau 3a: composant planté des forêts semi-naturelles de production. Estimation de la finalité prédominante des forêts plantées

(Veuillez consulter la Section 7 du Document de travail FP35)

Dans les tableaux 5 (a, b) du questionnaire concernant les catégories destinées à la production et à la protection, veuillez estimer en %⁴⁵ la superficie des composants plantés des forêts semi-naturelles, (tableau 5^a) **destinées à une finalité prédominante**, celle-ci sera en rapport avec les chiffres calculées dans le tableau 2b.

Veuillez calculer aussi la superficie des plantations forestières (tableau 5b), celle-ci sera en rapport avec les chiffres fournis dans le tableau 1.

Tableau 5a: Estimations détaillées de la superficie du composant planté des forêts semi-naturelles selon leur finalité prédominante.

Vos données doivent figurer dans la section jaune.

Pour faciliter la transparence en matière de références, veuillez faire une liste de tous les documents dont vous avez tiré les informations et les données utiles pour le complètement du questionnaire suivant le modèle fourni dans la section bibliographique du Document de travail 35.

Bibliographie (nouvelles données bibliographiques)

Inventaire forestier national : base de données dendrométriques

Pignard (G., Thivolle-Cazat (A.), Hamza (N.), Disponibilités en bois résineux en France – Réévaluation après les tempêtes de 1999, 2004, 427 p.

Office national des Forêts, Bulletin technique n° 31, 1996

Office national des Forêts, Forêts et risques naturels en montagne, 1990

Inventaire forestier national – France. Observations concernant le questionnaire sur les forêts plantées

Observation générale : l’Inventaire forestier national ne notait jusqu’à présent l’origine artificielle des peuplements que pour ceux qui étaient âgés de moins de 40 ans au moment de l’inventaire. Cette limite nous a paru correspondre à la définition des plantations de la FAO (espacement régulier, gestion intensive, ...) sauf pour le pin maritime du Sud-Ouest géré intensivement sur l’ensemble de son cycle : l’estimation de la surface des plantations du tableau T4 du GFRA2005 est donc basée sur ces données (voir § 4.2.2 du GFRA2005). De même, l’estimation du composant planté des forêts semi-naturelles est limité aux boisements et reboisements de moins de 40 ans, en l’absence d’autres éléments.

Page 2 : une estimation approximative de la part des plantations de production et de protection a pu être réalisée à partir des données de l’IFN et de l’Office national des forêts (ONF). Les résultats sont les suivants :

Surface (milliers d’ha)

	1990	2000	2005
Plantations de production	1 813 (98%)	1 907 (98%)	1 937 (98%)
Plantations de protection	29 (2%)	29 (2%)	31 (2%)
Total	1 842	1 936	1 968

Page 4 : l’estimation de la part entre production et protection est également approximative (IFN et ONF)

Pages 6 et 7, tableaux 3a à 3d : il n’a pas été possible de distinguer la production et la protection : compte tenu du très faible % classé en protection, on a indiqué les résultats des 2 catégories confondues dans les tableaux « production ».

Comme signalé plus haut, seules les données sur le pin maritime concernent les peuplements quel que soit leur âge : on a ainsi pu renseigner le % par classe d’âge, l’AMA et les rotations.

Le fait d'avoir limité aux peuplements de moins de 40 ans les autres essences implique qu'il y a discordance entre les rotations pratiquées et les classes d'âge annoncées : c'est pourquoi les % figurent en italiques. Par ailleurs, les AMA des peuplements à l'âge d'exploitabilité ne sont pas connus.

Enfin, les rendements du volume de récolte ne sont pas disponibles.

Pages 8 et 9, tableaux 4a et 4c : il n'a pas été possible de distinguer la part entre petits propriétaires et entreprises pour la forêt privée.

Pages 10 et 11, tableaux 5a et 5b : les peuplements plantés pour la production sont généralement destinés à la production de grumes mais ils fournissent également une part importante de bois d'industrie tout au long de la vie du peuplement (éclaircies) : c'est pourquoi les 2 finalités ont été fusionnées et mises à 100%.

Les peuplements plantés pour la protection sont destinés à la protection des sols et des eaux et ont donc été classés dans la catégorie « environnement non industriel ».

Semi-naturales			
Plantación para la producción	710.4	1083	1204.3
Plantación para la protección			

Informe sobre el IMA (Incremento Medio Anual), la duración del ciclo de rotación, el rendimiento del volumen de aprovechamiento, y la distribución por clase de edad de las 10 especies principales del componente plantado de los Bosques semi-naturales (para la producción y para la protección) y de los bosques de plantaciones (para la producción y la protección).

(Sírvase hacer referencia a la Sección 5, del Documento de Trabajo FP35)

En las tablas 3 (a, b, c, d), sírvase suministrar los porcentajes de las 10 especies principales utilizadas en su país **sólo para el año 2005**.

En la tabla 3a: Sírvase suministrar las 10 especies principales para el **componente plantado de los Bosques semi-naturales para la producción**

En la tabla 3b: suministre las 10 especies principales del **componente plantado de los Bosques semi-naturales para la protección**

En la tabla 3c: suministre las 10 especies principales de los **Bosques de plantaciones para la producción**

En la tabla 3d: suministre las 10 especies principales en los **Bosques de plantaciones para la protección**

En cada tabla, sírvase agrupar las especies restantes dentro de la clasificación 11 denominada “Otros”.

El total de los porcentajes para las 11 clasificaciones debe sumar el 100%.

Sírvase suministrar los mejores datos en absoluto acerca de cada una de las especies en lo que se refiere al: Incremento Medio Anual (IMA), la duración del ciclo de rotación y el rendimiento del volumen de aprovechamiento.

Finalmente suministre una estimación porcentual (%) de la distribución por edad. **La distribución por edad debe sumar el 100%.**

Tabla 3c: Bosques de plantaciones para la producción. Composición de las especies (%), Incremento Medio Anual (m³/ha/año), Duración del ciclo de rotación (en años), Rendimiento del volumen de aprovechamiento (m³/ha) y distribución por clase de edad (%). Sus datos figurarán en la sección amarilla.

Año de referencia: 2005

10 principales especies plantadas	%	Incremento Medio Anual m ³ /ha/año		Duración del ciclo predominante años		Rendimiento vol. de aprovechamiento m ³ /ha		Distribución por clase de edad %										
		Min	Max	Min	Max	Min	Max	0-5	5-10	10-20	20-30	30-40	40-50	50-70	70-90	90-100	>100	Total

Estimación de la propiedad de los Bosques plantados

(Sírvase hacer referencia a la **Sección 6**, del Documento de Trabajo FP35)

Se le solicita suministre en las tablas 4 (a, b, c, d), los detalles acerca de la propiedad en términos porcentuales “%” de: los componentes plantados de los Bosques semi-naturales (para la producción y para la protección) así como acerca de los bosques de plantaciones (para la producción y para la protección).

Los porcentajes totales de las categorías de propiedad deben sumar el 100%

Tabla 4c: Bosques de plantaciones para la producción. Sus datos figurarán en la sección amarilla.

Año de referencia	1990				2000				2005											
Plantación para la protección	Área que figura en la Tabla 1 (1000 ha)																			
	Propiedad (%)

Estimación de la finalidad predominante de los bosques plantados

(Sírvase hacer referencia a la Sección 7, Documento de Trabajo FP35)

En las tablas 5 (a, b) del cuestionario, relativas a las categorías destinadas a la producción y a la protección, sírvase estimar, en %⁴⁶ el área de los componentes plantados de los bosques semi-naturales, (tabla 5^a) **destinados a un fin predominante**, la cual está relacionada con las cifras calculadas en la tabla 2b. Así como el área de los Bosques de plantaciones (tabla 5b), la cual está relacionada con las cifras suministradas en la tabla 1.

Tabla 5b: Estimaciones detalladas acerca de la finalidad de los bosques de plantaciones por porcentaje del área. Sus datos figurarán en la sección amarilla.

Finalidad según FRA	1990	2000	2005	Fin predominante	1990	2000	2005
	Estimaciones tomadas de la Tabla 1 (000 ha)				%	%	%
de producción	769	1078	1229	Madera aserrada industrial	63.8	63.1	69.3
				Pasta/Fibra industrial	36.2	36.9	30.7
				Bioenergía industrial			
				Producto Forestal no maderero industrial			
				No especificado para fines industriales			
Total					100	100	100
de protección				Ambiental no industrial			
				Recreación no industrial			
				No especificado, no industrial			
				Leña, no industrial			
Total					100	100	100

- El experto en bosques plantados hará una lista de los documentos de referencia en la sección bibliográfica.

⁴⁶ Las estimaciones de la finalidad predominante deben sumar el 100% en cada categoría.

Para favorecer la transparencia en materia de referencias, sírvase hacer una lista de todos los documentos que se demostraron apropiados para completar la información y los datos de este cuestionario de conformidad con la lista estándar suministrada en la sección bibliográfica del Documento de Trabajo 35.

(Refer to **Section 1**, Working Paper FP35^{*})

Forest type

Table 1 has been derived from Table 4 (T4) of National Report for FRA 2005

Table 1: Area of Forest as reported in Table T4 of FRA 2005

FRA 2005 Categories	Surface (1000 ha)		
	Forest		
	1990	2000	2005
Primary			
Modified Natural	38825	33858	31373
Semi-Natural			
Productive Plantation	323	571	696
Protective Plantation	71	125	153

Source: Derived from T4, in FAO 2004/5, Global Forest Resources Assessment update 2005,
National Country Report

According to the FRA 2005 definitions Planted Forests include the planted component of Semi-Natural Forests and both Productive and Protective Plantation Forests.

*FAO. 2005. Planted Forests and Trees Working Papers: Global Planted Forest Thematic Supplement to Forest Resources Assessment 2005. *Guidelines for National Reporting Tables for Planted Forests*, Working Paper FP35, Forest Resources Development Service, Forest Resources Division. FAO, Rome

Table 2a: FRA 2005 area of Semi-Natural Forest classification and estimates of “Planted” and “Assisted Natural Regeneration” components of Semi-Natural Forests

Year	1990			2000			2005		
FRA Semi-Natural Forest	FRA 2005 area estimates			FRA 2005 area estimates			FRA 2005 area estimates		
Semi-Natural Forest components	Relative figures (%)			planted (%)	assisted (%)	Total (%)	planted (%)	assisted (%)	Total (%)
Estimates	-	-	-	-	-	-	-	-	-

Note to table 2a:

- National information is not available in FRA 2005 classes. Therefore modifications has been made.
- Semi-natural forest = Protected Areas System Working Circle area plus forest area not included in WCS.
- The Natural Regeneration has been done only in modified natural forest.
