## BACKGROUND

### A. MRLs AT STEP 3 OF THE PROCEDURE

1. The annual Joint FAO/WHO Meeting on Pesticide Residues (JMPR) was held in Geneva, Switzerland, from 15 to 24 September 2015. The following extracts of the results of the annual Joint FAO/WHO Meeting on Pesticide Residues are provided to make them accessible to interested parties at an early date.
2. The Meeting evaluated 29 pesticides, of which 8 were new compounds, and 4 were re-evaluated within the CCPR periodic review programme of the Committee on Pesticide Residues (CCPR). The Meeting established acceptable daily intakes (ADIs) and acute reference doses (ARfDs).
3. The Meeting estimated maximum residue levels, which it recommended for use as maximum residue limits (MRLs) by CCPR. It also estimated supervised trials median residue (STMR) and highest residue (HR) levels as a basis for estimation of the dietary intake of residues of the pesticides reviewed. The allocations and estimates are shown in the table in the Annex.
4. Pesticides for which the estimated dietary intakes might, on the basis of the available information, exceed their ADIs are marked with footnotes, which are also applied to specific commodities when the available information indicated that the ARfD of a pesticide might be exceeded when the commodity was consumed. It should be noted that these distinctions apply only to new compounds and those re-evaluated within the CCPR periodic review programme.
5. The table includes the Codex reference numbers of the compounds and the Codex Classification numbers (CCNs) of the commodities, to facilitate reference to the Codex maximum residue limits for pesticide residues and other Codex documents. Both compounds and commodities are listed in alphabetical order.

6. The table includes the Codex reference numbers of the compounds and the Codex classification numbers (CCNs) of the commodities, to facilitate reference to the Codex maximum limits for pesticide residues and other documents and working documents of the Codex Alimentarius Commission. Both compounds and commodities are listed in alphabetical order.

7. Apart from the abbreviations indicated above, the following qualifications are used in the Table.

* (following name of pesticide)	New compound
** (following name of pesticide)	Compound reviewed within CCPR periodic review programme
* (following recommended MRL)	At or about the limit of quantification
HR-P	Highest residue in a processed commodity, in mg/kg, calculated by multiplying the HR in the raw commodity by the processing factor
Po	The recommendation accommodates post-harvest treatment of the commodity.
PoP (following recommendation for processed foods (classes D and E in the Codex classification))	The recommendation accommodates post-harvest treatment of the primary food commodity.
STMR-P	An STMR for a processed commodity calculated by applying the concentration or reduction factor for the process to the STMR calculated for the raw agricultural commodity.
W (in place of a recommended MRL)	The previous recommendation is withdrawn, or withdrawal of the recommended MRL or existing Codex or draft MRL is recommended.

8. The Report of the 2015 JMPR (including the Annex) is available from the website below:

FAO weblink: <http://www.fao.org/agriculture/crops/thematic-sitemap/theme/pests/jmpr/jmpr-rep/en/>

WHO weblink: <http://www.who.int/foodsafety/publications/jmpr-reports/en/>

9. Should anybody have problems in downloading the above documents, please contact the FAO or WHO JMPR Secretariats at the following addresses in order to get a copy as an email attachment:

Mrs Yong Zhen YANG  
 FAO JMPR Secretary  
 Plant Production and Protection Division  
 FAO of the United Nations

## B. MRLS AT STEP 6 OF THE PROCEDURE

10. The 47<sup>th</sup> Session of the Committee on Pesticide Residues (April 2015) agreed to advance MRLs for Fenpropathrin (185) on cherries (FS 0013), peaches (FS 2001) and pome fruits (FP 0009) to the 38<sup>th</sup> Session of the Codex Alimentarius Commission (July 2015) for adoption at Step 5. This decision was made in light of acute intake risks identified by JMPR in 2014 and the need to await advice on the availability of an alternative GAP.<sup>1</sup>

<sup>1</sup> REP15/PR, para 70 and Appendix IV.

11. The Commission adopted the MRLs at Step 5 as proposed by CCPR with the exception of MRLs for Fenamidone (264) for mustard greens (VL 0485) and spinach (VL 0502) which were erroneously listed in REP15/PR, Appendix IV as CCPR had agreed to retain these MRLs at Step 4.<sup>2</sup>

#### REQUEST FOR COMMENTS

12. Member governments and interested international organizations having granted observer status in Codex wishing to submit comments on the proposed draft MRLs that correspond to Step 3 of the Codex Procedure as proposed by the 2015 JMPR and also on other recommendations which are relevant to the work of the 48<sup>th</sup> Session of the Committee on Pesticide Residues (see Table below) should do so in writing, in conformity with the Procedures for the Elaboration of Codex Standards and Related Texts (*Codex Alimentarius Procedural Manual*) to the addresses and by the deadline indicated on cover page.

13. Member governments and interested international organization having granted observer status in Codex wishing to submit comments on the draft MRLs at Step 6 for Fenpropathrin (185) on cherries (FS 0013), peaches (FS 2001) and pome fruits (FP 0009) in particular on the availability of alternative GAP and any other relevant data / information that may allow JMPR to refine the dietary risk assessment in order to make recommendations to CCPR on MRLs for these products should do so in writing, in conformity with the Procedures for the Elaboration of Codex Standards and Related Texts (*Codex Alimentarius Procedural Manual*) to the addresses and by the deadline indicated on cover page.

14. Codex circular letters are available on the Codex website at: <http://www.codexalimentarius.org/> (Circular Letters, 2015).

---

<sup>2</sup> REP15/CAC, para 74

## Annex 1:

Acceptable daily intakes, short-term dietary intakes, acute reference doses, recommended maximum residue limits and supervised trials median residue values recorded by the 2015 Meeting

Pesticide (Codex reference number)	CCN	Commodity	Recommended Maximum residue level (mg/kg)		STMR or STMR-P mg/kg	HR or HR-P mg/kg

<sup>a</sup> Lindane was recently classified as 2A (Probably carcinogen) by IARC. Since lindane is listed in annex A of the Stockholm convention and should be eliminated from production and use no toxicological re-evaluation is requested.

<sup>b</sup> Extraneous Maximum Residue Limit (EMRL) is the maximum concentration of a pesticide residue arising from environmental sources due to former agricultural uses, not from the use of the pesticide directly or indirectly on the food or feed.

	FB 0272	Raspberries	15		3.0	
Definition of the residue (for compliance with MRL and dietary intake) for plant commodities: <i>pyrimethanil</i> Definition of the residue for compliance with the MRL and for dietary intake estimation for milk: <i>sum of pyrimethanil and 2-anilino-4,6-dimethylpyrimidin-5-ol, expressed as pyrimethanil</i> . Definition of the residue for compliance with the MRL and for dietary intake estimation for livestock tissues (excluding poultry): <i>sum of pyrimethanil and 2-(4-hydroxyanilino)-4,6-dimethylpyrimidine, expressed as pyrimethanil</i> . <i>The residue is not fat-soluble</i>						
<b>Quinclorac (287)*</b> ADI: 0-0.4 mg/kg bw	FB 0265	Cranberry	1.5		0.35	1.36
	VS 0627	Rhubarb	0.5		0.36	0.46
Definition of the residue for compliance with MRL for plant commodities: <i>quinclorac plus quinclorac conjugates</i> Definition of the residue for estimating dietary intake: <i>quinclorac plus quinclorac conjugate plus 10% quinclorac methyl ester expressed as quinclorac</i> Definition of the residue for compliance with MRL and estimating the dietary intake for animal commodities: <i>quinclorac plus quinclorac conjugates</i> <i>The residue is fat-soluble</i>						
<b>Spirotetramat (234)</b> ADI: 0-0.5 mg/kg bw ARfD: 1 mg/kg bw	FI 0326	Avocado	0.4		0.126	0.23
	FI 0336	Guava	2		0.55	0.85
	GC 0447	Sweet corn	1.5		0.31	0.75
Definition of the residue (for compliance with MRL for plant commodities: <i>Spirotetramat and its enol metabolite, 3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]dec-3-en-2-one, expressed as spirotetramat</i> . Definition of the residue (for estimation of dietary intake) for plant commodities: <i>Spirotetramat, enol metabolite 3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]dec-3-en-2-one, ketohydroxy metabolite 3-(2,5-dimethylphenyl)-3-hydroxy-8-methoxy-1-azaspiro[4.5]decane-2,4-dione, monohydroxy metabolite cis-3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]decan-2-one, and enol glucoside metabolite glucoside of 3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]dec-3-en-2-one, expressed as spirotetramat</i> . Definition of the residue (for compliance with MRL and estimation of dietary intake) for animal commodities: <i>Spirotetramat enol metabolite, 3-(2,5-dimethylphenyl)-4-hydroxy-8-methoxy-1-azaspiro[4.5]dec-3-en-2-one, expressed as spirotetramat</i> . <i>The residue is not fat-soluble</i> .
