CropLife International Perspectives on Proposed Changes to IESTI Equations

Presented by Cheryl Cleveland on behalf of CropLife International

CropLife International conducted an analysis of potential changes of the IESTI equations, as proposed in the conclusion of a workshop conducted by several regulatory authorities in Sep 2015..

On Monday 25 April during after plenary at 17.15 to 18:15, CropLife will present a number of case studies to illustrate our main concerns: 1.) Potential loss of a significant number of MRLs 2.) Overly conservative exposure assessment 3.) Risk communication challenges .

As the proposed revision of the IESTI equations are not related to a current lack of consumer protection, CropLife advocates for an elaborated approach, considering the full impact of all changes on trade and on risk communication. For more details see CRD15.
