WISDOM for Cities

Analysis of wood energy and urbanization using WISDOM methodology

Woodfuels Integrated Supply/Demand Overview Mapping

Forestry for cities

Urban and Periurban Forestry

FAO promoting an optimum cover of tree and forest resources in and around cities taking into account the specific needs for poverty alleviation, food security, livelihood improvement and sustainable land, forest and other tree-system management.

Urban and Periurban Forestry - Networking

“Forest and Trees for Healthy Cities - Improving Livelihoods and Environment for All” An Interactive Community

- Optimizing the role of trees and forests to alleviate poverty.
- Inclusive and participatory decision making: Drawing a long term vision for cities and citizens.
- Dialogue for all: governmental, municipal & local authorities, NGOs, research and education institutions, private sector and civil society.
- At work together: urban development, agriculture and forestry.
- A Centre of Excellence for All: Information, best practices and knowledge resource
- Interactive tool to develop technical, policy and decision making tools
- JOIN US AS PARTNERS!

Partners: Danish Centre for Forest, Landscape and Planning of Copenhagen University (KVL), University of Florence, EUFORIC, IPES, RUA/ETC, IDRC, IUFRO.
