

## **UK comments on the 2024-2027 MYPoW**

The UK supports proposal 4A. In our initial proposal we suggested that we need to build on and increase the implementation and impact of the RAI. As such, we would propose the RAI is highlighted in proposal 4A as one of the key policy products to be promoted.

We agree with the Chair's sentiment that there is an opportunity with proposal 4A to:

1. Analyse and review implementation status so far of the RAI and other policy products (such as with the document CFS 2022/50/Inf.21 on monitoring the effectiveness of the RAI).
2. Plan and coordinate effective engagement for future uptake and implementation of the RAI and other policy products.

Lastly, the UK has some concerns around the framing of 4C as it seems to want to reconsult and renegotiate the RAI. It would be useful for us to clarify what "update" means as the UK would not want to see a weakening of the existing RAI principles. Instead, we would like to work on how we can learn from current implementation and further the RAI's impact.
