

**Belarus' comments on the Zero Draft of the policy recommendations on Reducing Inequalities for Food Security and Nutrition**

Belarus would like to propose to add the paragraph 30 bis:

"30 bis. Ensure the transfer of technology and purchase of equipment, software or hardware and spare parts needed for the agricultural and food industry development and production which are critical, including in the context of South-South, North-South and triangular cooperation."

We do believe that it's very important to keep the roots open.

We have discussed this proposal with the delegations of Belarus, Cuba, Nicaragua and Venezuela. We have received their support for this idea so this para could be considered as a proposal from the group of countries.
