Renewal Natural Resources (RNR) Census 2009

Ministry of Agriculture & Forests

Management and Co-ordination:	Information Management Section (IMS), Policy and Planning Division (PPD), Ministry of Agriculture & Forests (MoAF).
Technical Census Working Group Members and Regional Coordinators:	Dorji Wangchuk and Thinley Zangmo (IMS, DoA), Namgay Dorji and Kinzang Namgay (IMS, DoL), Saran Pradhan (FIMS, DoFPS) and Karpo Dukpa (IMS, PPD) and Tashi Yangzom (PEPS, PPD)
Co-ordination and Supervision of data collection:	Dzongkhag RNR sector heads supported by their assistant officers in all 20 dzongkhags.
Data collection:	RNR Extension Officers and CNR Trannees on field attachment program across the country.
Data entry:	20 people were temporarily recruited for the data entry in to the database.
Technical Advisory:	Phub Sangay National Statistics Bureau
Data analysis; design and author of the publication:	Karpo Dukpa Information Management Section Policy & Planning Division
Financial Resource for Census Implementation:	DANIDA supported Decentralized Natural Resource Management Component Project (DNRMC).
Financial Resource for Printing of Pulication:	International Food Policy Research Institute (IFPRI), Swiss Agency for Development Cooperation (SDC) and Royal Government of Bhutan (RGoB)

Foreward

The Ministry of Agriculture & Forests is pleased to bring out the publication of the RNR Census 2009 which is the second of its kind in the history of RNR Sector. The publication presents comprehensive statistics on agriculture; livestock; some qualitative data on forestry; land holdings; constraints to agricultural development; accessibility to motor roads, markets and service centers; sources of cash income; status on food grain self-sufficiency; agriculture marketing; and inputs distribution.

The statistics are presented in two volumes: volume-I at national and dzongkhag levels, and volume-II at geog level. The database at household level of the census is maintained at the Policy and Planning Division. The household data will be useful for further analyses to facilitate government plans and programs to assist small farmers effectively.

The RNR census 2009 is an outcome of comprehensive coverage both in terms of households and data parameters. Therefore, the census results provide a highly accurate baseline statistics for the RNR Sector for targeting and monitoring of development programmes; and for improvement of the RNR statistical information system.

The Ministry of Agriculture & Forests extends appreciation for technical guidance provided by the National Statistics Bureau (NSB) during the whole process of preparation to completion of the RNR Census 2009. The Ministry also commends the Technical Departments and staff of the Information Management Sections for their excellent collaborations and contributions. Further the deepest appreciation must also be extended to our RNR colleagues in the 20 dzongkhags and 205 geogs for their unwavering support and cooperation while conducting the census.

The Ministry is grateful for the financial resource support provide by the DANIDA through the Decentralised Natural Resource Management Component under the Environment and Urban Sector Program Support for the implementation of the census and International Food Policy Research Institute (IFPRI Project) International Food Policy Research Institute (IFPRI), Swiss Agency for Development Cooperation (SDC) and Royal Government of Bhutan (RGoB) for supporting the printing of this publication.

Lastly, I congratulate the Information Management Section of the Policy and Planning Division, Ministry of Agriculture & Forests for successful coordination and bringing out the publication of the RNR Census 2009.

Dr. Pema Gyamtsho
MINISTER

Descriptions

Agricultural Constraints	Hindrances to achieving full benefits of RNR resources potential.
Agricultural Inputs	Inputs applied to support production and productivity.
Bearing Trees	Fruit trees that have reached a level of maturity where fruits are produced.
Chemical Fertilizer	Manufactured chemical compounds such as phosphate, potassium, nitrogen and other mixed and complex fertilizers applied to soil to enhance or improve production.
Dry Land	Agricultural land where crops are grown without irrigation.
Edible Items	Non-wood forest products that can be consumed by human.
Farm Household	A person or group of persons operating as one economic unit and engaged in agricultural production.
Food Grain Security	Consumers' access to food at all times, meaning that a person has enough food grains to feed all through the year.
Handicraft Items	Furnitures and other wood and non-wood byproducts.
Herbicides	Chemical substances used for controlling unwanted weeds that compete with crops for nutrients, space and water.
Improved breed	Breed of animals, which has through human technology improved upon the off-springs of local stock or breeds of higher quality directly imported into the country.
Kitchen Garden	Part of the cultivated farmlands generally used growing vegetables and other horticulture crops. Kitchen gardens are generally located in the homestead.

Land Leased in	Temporary land sharing arrangement where a person takes over somebody's land for cultivation. The produce is shared, generally on a 50-50 basis or a fixed rent as mutually agreed between the two parties.
Land Leased out	It is the reverse of land leased in but similar arrangements adopted by both the parties.
Land Left Fallow	Land left uncultivated for a certain period of time to allow soil replenish its own fertility but could be due to shortage of farm labour.
Land Tenure	Land status or rights under which land is held or operated.
Land Use	Land operated by the farm household for various RNR productions.
Livestock	Domesticated animals such as cattle, yak, sheep, goats, pigs, horses, etc. including poultry.
Local Breed	Breed of animals indigenous or native to the country.
Medicinal Items	Plants capable of producing medicinal or aromatic substances, e.g. lemongrass, chirata, pipla etc.)
Medicinal Plants	Plants with medicinal value.
Nearest motor-road points	Any kind of motorable road (highway, feeder road, farm road, approach road etc.) that is nearest to the household.
Nearest RNR Extension Centers	RNR related extension centers that are nearest to the household, such as RNR Extension Centers, Livestock Extension Centers and Agriculture Extension Centers.
Own Land Operated	An area legally possessed and cultivated by the land owner him/herself.
Paddy	Rice-paddy with husk (rough grain)
Pesticide/Insecticide	Poisonous chemicals substances applied in the field crops to control animal pests and insects.
Poultry	Birds such as hens, cocks, ducks, etc. whether native or improved.
Rice	Rice-paddy without husk (net grain).
Wetland	A terraced area, which has access to artificially provided irrigation to grow other than paddy. There are rainfed wetlands too but terrached.

CHAPTER: 1

1.1 Introduction

Bhutan is predominantly an agrarian economy with about 69 percent of the population residing in the rural areas (RNR 10th Plan). The Renewable Natural Resources (RNR) Sector consisting of agriculture, livestock and forestry, provides livelihood to at least 66.6 percent of the population according to the Bhutan Living Standard Survey (BLSS) 2007 and its contribution to national GDP was 18.9 percent in 2008 (NSB SYB 2009). The agricultural practices have changed tremendously over the decades but the availability of baseline data however, has been mostly from the RNR census 2000.

The RNR Census 2009 is the second of its kind in the history of the Ministry of Agriculture & Forests in the country. The first RNR Census one was conducted in 2000. The census mainly focuses on the rural and extended municipal areas of the country where natural resources sector still dominates the development occupation of the populace. Broadly, the census covers activities and productions, socio-economic conditions and food security status, vital issues and constraints associated with the natural resources sector encompassing agriculture, livestock and forestry. The data was collected from the households in rural and extended municipal areas by administering structured questionnaires. The RNR extension officials with agriculture, livestock and forestry background posted in all 205 geogs of the country carried out the field data collection. The Decentralized Natural Resources Management (DNRM) Component under the Danida-supported Environment and Urban Sector Programme Support (EUSPS) of the MoA had sponsored the implementation of the RNR Census 2009.

1.2 Objective

The natural resources sector (agriculture, livestock and forestry) continues to be the mainstay of the economy and livelihood. Because of the predominance of the sector in the rural economy, the availability of statistics on the RNR activities has ever become the unequivocal prime mover in the rural development. However, due to lack of sufficient, comprehensive and reliable data, the planning and execution of RNR development plans and programmes has often been

handicapped. Therefore, the principal objectives of the RNR Census 2009 are the following:

- To provide updated and reliable statistical information on RNR activities at all administrative units for efficient monitoring, planning and policy making
- To enable an efficient study of small holding communities to facilitate government plans and programs to assist small farmers effectively.
- To provide baseline data for monitoring of millennium development goals (MDGs), particularly poverty and food security situations
- To provide basis for improvement of the RNR statistical information system and
- To facilitate the ongoing Royal Government's efforts to streamline information sharing and evaluation of planned development activities.

1.3 Scope and Coverage

The RNR Census 2009 result presents the data for the year 2008 on the agricultural holdings, agricultural inputs, productions, collection of forest products and production of forest byproducts, marketing, accessibility to basic service centers and motor roads, food security status, issues and constraints of the farming households in the rural and extended municipal areas of the country.

The RNR Census 2009 aimed for complete enumeration of all households in the country engaged in RNR activities and production. However, of the 61,578 households listed as having engaged in the RNR activities only 57,412 (93.23 percent) households could be captured and 4,166 (6.77 percent) households turned out to be absentees. The absentees were those households whom the enumerators either failed to established contact with or found nobody representing them for enumeration even after three visits. The reasons for the absentees were to do with people on migration, involved in distant located off-farm activities, and away on pilgrimage and business.

1.4 Design and Data Collection Method

The international agricultural census methodology adopted by Food and Agriculture Organization (FAO) of the United Nations (UN) was followed but customized to local conditions and requirements. The experiences accumulated by the ministry during the last 10 years or so, by way of implementation of the first RNR Census in 2000 and several consecutive surveys and other ad-hoc studies, served as the principal module in the overall process of the census design and implementation. The lessons learnt and weaknesses identified, during implementation and monitoring of RNR Sector's 9th Plan (2002-2008) and preparation of the 10th Plan (2008-2013), in the context of availability and reliability of agricultural statistics, have been to the best possible extent incorporated, the technical expertise and guidance of National Statistic Bureau collaborated and comments of the relevant stakeholders integrated in the planning and design of the Census.

The data was collected through enumeration of individual households by administering a structured and close-ended questionnaire covering the activities of agriculture, livestock and forestry. The households' lists congregated from all the Geog RNR Extension Centers served as the basis for developing the census households list. The enumerators visited individual households but for few instances due to the scattered nature of settlements and distances between them, the respondents (farmers) had to be gathered at appropriate locations for the interview. The households that the enumerators failed to meet with or found no representatives even after three visits were considered as absentees or the non-respondents.

1.5 Data collection Period

The RNR Census 2009 was intended to presents the data on RNR activities for the period between January 2008 and December 2008. It was imperative to have the data captured when farmers' (respondents) memory still could reveal the truth about their farming activities and production for the immediate past year. The data collection was therefore, targeted to be carried out in January 2009 which is the closest to the past year 2008. However due to severe winter climatic conditions the whole communities of certain geogs at extremely higher elevated parts of the country had been on seasonal migration to various warmer places. Some geogs still practices the traditional routine of remaining away for as long as two – three months from their villages on off-farm activities elsewhere. Therefore, the RNR Census operation in Laya and Lunana (Gasa) and Naja (Paro) had to be postponed and could be executed only in the month of July and August 2009 but the data

collected was still for the year 2008.

1.6 Data Validation

The data validation was scrutinized at three key components to bring down errors to the bare minimum.

- **At design of questionnaire:** The survey questionnaire, as mentioned earlier was generally a close-ended type. In other words, the questionnaire was designed in a way that in most cases, the enumerators have to just write codes, tick and select from the list in order to ensure uniformity and prevent misspellings of the entries.
- **At field data collection:** Field data collection was done by the Extension Officers posted in the geogs. These officers were subject specialists and well acquainted in the local farming system and reasonably versed in local dialects. The briefing on the methodology and use of the questionnaire, provided for the enumerators, the supervisors and the field coordinators prior to the field data collection was an added value that impacted in an appropriate interviewing of the farmers and proper recording of the responses. The enumerators were provided with enumeration manual each for reference during the data collection. Further, the field supervisors, at the end of each day, checked the completed questionnaires for completeness and errors.
- **At data computation:** Computer literate recruits have done the data computation after having availed one week training on database operation. The database was designed in a same style and sequence as that of the questionnaire for easy operation and typographical errors were prevented by allowing imputing of codes, checking or ticking the boxes, and selection from the dropdown menu. Validation checks were also assigned to reject and popup alert messages in case the wrong or unintentional entries were made. Further, constant backstopping and close supervision have been ensured by assigning a permanent technical expert for the whole data computation period.

1.7 Data Processing

The database was designed in MS Access Software and data entry was done in 20 computers by 20 temporary recruits, meaning the database was replicated into 20 files. After completion of the data entry, the contents of these 20 files have been merged to form a single file through establishment of union queries followed by once again validation wherever necessary and synchronization of data. Transformation of some variables (from codes to names, names to codes and check and tick boxes to absolute numbers) was required depending on the type and purpose of the data. The entire data organization and processing was performed through establishing queries in the MS Access program. Some analyses were also done in the same program but for major and in-depth analytical and graphical presentation purposes the dataset generated by the Access queries were exported to MS Excel program.

1.8 Organization of the census

The scale of task and the complexities involved in the implementation of such a nationwide census is notably an enormous venture. Such an exercise by nature has administrative and political influence and therefore demands authority and integrated views and commitments of all relevant stakeholders. Because of these underlying reasons arrangement of the layers of people in the hierarchy with defined distinct roles and responsibilities was established as elaborated below.

1.9 RNR Census Working Group (CWG)

The staff of the Information Management Sections (IMS) of the Policy and Planning Division (PPD), Department of Livestock (DoL), Department of Agriculture (DoA) and Department of Forests & Park Services (DoFPS) formed the CWG. The responsibilities of this group included planning and preparation of technical aspects of data collection materials which involves designing of questionnaires, developing methodologies, estimation of timeframe and budgetary requirement, training of field coordinators, supervisors and enumerators. The NSB focal person (a senior statistician) served as the technical advisor to the CWG throughout the whole processes of preparations and implementations. The National RNR Census Coordinator (NCO) was appointed from the IMS of PPD for overall management and coordination of the census implementation in the country.

1.10 Dzongkhag RNR Census Coordinators (DCCs)

The 20 DCCs were appointed (1 each for every dzongkhag) from among the 3 RNR sector heads (livestock, agriculture and forests). The DCCs were mandated for overall coordination of the census implementation in the dzongkhags. Their specific roles were to liaise with local leaders, mobilize field supervisors and enumerators, and monitor progress based on the work plan and submission of the completed questionnaires to the National Census Coordinators. Further, the DCCs were also to verify the daily subsistence allowance (DSA) claim of the field supervisors and enumerators, submit to the NCO and disburse the payment.

1.11 Dzongkhag RNR Census Supervisors (DCSs)

Again the dzongkhag RNR sector (livestock, agriculture and forests) heads and their assistants served as the field supervisors. They were accountable to the DCCs and specifically responsible for mobilization of enumerators, supervision, checking the completed questionnaires for their completeness in an intended manner and submit to the DCCs. There were at least over 60 supervisors distributed across the country.

1.12 RNR Census Enumerators (CEs)

The RNR extension officers posted in the geogs and trainees from College of Natural Resources (CNR) on field attachment have carried out the field enumeration. The enumerators were to complete the data collection in the geogs where they have been posted but depending on the size of the geogs, they needed to be adjusted or reshuffled to cover larger geogs. There were about 730 extension officers of agriculture, livestock and forestry backgrounds posted in 205 geogs of the country.

Table 1: Accessibilities of rural households to nearest RNR Extension Centers, Motor-road Points and Forestry Offices, 2008

Dzongkhags / Geogs	Percent households by walking distances to nearest RNR Extension Centers					Percent households by walking distances to nearest motor-road points					Percent households with walking distances to nearest Forestry Offices				
	Less than 1 hour	1-3 hours	3-6 hours	6 hours - 1 day	More than 1 day	Less than 1 hour	1-3 hours	3-6 hours	6 hours - 1 day	More than 1 day	Less than 1 hour	1-3 hours	3-6 hours	6 hours - 1 day	More than 1 day
