**PREFACE**

At the end of the 2007/08 Agricultural Year, the National Bureau of Statistics (NBS) in collaboration with the Ministries of Agriculture, Food Security and Cooperatives, Livestock and Fisheries Development; Water; Industry and Trade; the Prime Minister's Office, Regional Administration and Local Government (PMO/RALG) and the Office of the Chief Government Statistician, (OCGS), Ministries of Agriculture and Natural Resources; Livestock and Fisheries conducted the Agricultural Sample Census. This is the fourth Agricultural Census to be carried out in Tanzania, the first one was conducted in 1971/72, the second in 1993/94 and 1994/95 (during 1993/94 data on household characteristics and livestock count were collected and data on crop area and production in 1994/95), and the third was conducted in 2002/03.

The census collected detailed data on crop production, crop marketing, crop storage, livestock production, fish farming, and poverty indicators. In addition to this, the census was large in its scope and coverage as it provides data that can be disaggregated at district level and thus allow comparisons with the 2002/03 National Sample Census of Agriculture. The census covered smallholders in rural areas only and large scale farms. This report presents data disaggregated at regional level and it focuses on livestock kept by small holders and Large Scale Farms.

The extensive nature of the census in relation to its scope and coverage is a result of the increasing demand for more detailed information to assist in the proper planning of the agricultural sector and in the administrative decentralization of planning to district level. It is hoped that this report will provide new insights for planners, policy makers, researchers and others involved in the agricultural sector in order to improve the prevailing conditions faced by agricultural households in the country.

On behalf of the Government of Tanzania, I wish to express my appreciation for the financial support provided by the development partners, in particular, the Department for International Development (DFID) and the Japanese Government through the Japan International Cooperation Agency (JICA) and others who contributed through the pooled fund mechanism.

My appreciation also goes to all those who in one-way or the other have contributed to the success of the survey. In particular, I would also like to mention the enormous effort made by the Planning Group composed of professionals from the Agriculture Statistics Department of the National Bureau of Statistics, Ministry of Agriculture, Food Security and Cooperatives, Ministry of

Livestock Development and Fisheries, Ministry of Water and Irrigation, Ministry of Agriculture, Livestock and Environment, Zanzibar, the Prime Minister's Office, Regional Administration and Local Government, Ministry of Industries, Trade and Marketing and the Office of the Chief Government Statistician, Zanzibar, the Food and Agriculture Organization of the United Nations and the Censuses and Surveys Technical Working Group (CSTWG).

Finally, I would like to extend my sincere gratitude to all the professionals, the consultants, Regional and District Supervisors and field enumerators for their commendable work. Certainly without their dedication, the census would not have been successful.

Dr. Albina Chuwa

Director General

National Bureau of Statistics

---

**EXECUTIVE SUMMARY**

A total of 5,838,523 households engaged in agriculture (field and horticulture crop production, livestock and fish farming and pastoralism) were sampled of which 5,706,329 (97.7%) were in the Mainland and 132,193 (2.3%) were in Zanzibar. In the Mainland, large concentration of agricultural households were recorded in Shinyanga, Mbeya and Kagera regions each with about 400 -500,000 households, followed by Dodoma, Tanga, Iringa, and Mwanza each with about 300 - 400,000 households. Dar es Salaam region had the least number of households engaged in agriculture (35,160). In Zanzibar, 18,651 agricultural households were located in Urban West district and 32,895 in North Pemba district.

Nationally, the total usable land available was 14,642,284 ha of which 14,516,893 (99.1%) are located in the Mainland and 125,391 ha (0.9%) are located in Zanzibar. In all regions of the Mainland and Zanzibar, land utilization was above 70%. However, in Arusha, Kilimanjaro, Pwani, Shinyanga and Zanzibar, 90% or more of the land was utilized. Generally, land utilization per household has remained constant at an average of 2 ha in 2002/03 and 2007/08 Agriculture Sample Census. However, large variations existed between regions whereby in regions where land scarcity is less acute such as Shinyanga, Singida, and Tabora, the total utilizable land remained slightly above the 2002/03 national average. In all the regions, there was an attempt to utilize almost the entire usable land available as the majority of them maintained a land utilization rate of between 80 and 100%.

Most of the land (66%) was planted with annual crops while permanent or perennial crops occupied 15% and about 8% was planted with a mixture of annual and permanent crops. The remaining area (11%) was kept under fallow. Land sufficiency varied largely between regions. For example, in Mtwara, Lindi, Ruvuma and Tabora regions, at least 50 percent of the households reported land sufficiency while all other regions reported land sufficiency below 50 percent. In the latter group, land scarcity was most acute in Mara, Manyara, Arusha and Kilimanjaro regions where 80 percent or more of the households reported of land insufficiency.

Nationwide, maize was the priority crop of choice for an overwhelming majority (5,107,264) of households across seasons followed by beans, paddy, groundnuts, sorghum and sweet potatoes, in that order, each engaging at least 500,000 households. However, the trend on the basis of areas planted was slightly different with maize still remaining on top of the table regardless of the

production season (total planted area 4,086,555 ha), followed by paddy (906,708 ha), beans (749,766 ha), cotton (574,836 ha) and (sorghum 568,650 ha).

Generally cereals were the main type of crops grown across the country occupying 5, 830,972 ha (71%) of the land under annual crops followed by pulses (chick peas, beans, cowpeas and green grams) planted on 1,002,819 ha (12%), oil seeds and oil nuts were planted on 966,583 ha and a very small proportion (1%) equivalent to 78,711 ha was planted with fruits and vegetables. A large proportion of all the crops were planted during the long rainy season with the exception of cereals for which the planted area for the short rainy season was about 20 percent of the planted area during the long rain season.

In several cases, both the quantities harvested and the productivity for all cereals have increased compared to 2002/03 regardless of the production season. However, productivity for the most popular cereals was highest for paddy (1.6 tons/ha) equivalent to 43.8 percentage increase compared to 2002/03, followed by maize with 38.5 percentage increase and sorghum with 40 percentage increase.

The greatest bulk of fruits and vegetables were produced in the Mainland and tomatoes was the single most dominant vegetable crop. The total area planted with tomatoes in the Mainland and Zanzibar was 26,612 ha (34% of total planted land) which produced the highest harvested quantity (321,128 tons or 63%) of the total harvested quantity of fruits and vegetables. Most fruits and vegetables are produced in the long rainy season, usually towards the end of the season, except the water melon for which both the area planted (1,865 ha) and the quantities harvested (10,585.4 tons) for the short rain season were higher than for the long rain season. In Zanzibar, both the number of households engaged in fruit and vegetable production and the area with these crops was limited but generally tomatoes was the leading crop in which the highest number of households (7,317) were involved and the harvested produce (6,141 tons) was higher than any other vegetable crop.

Most of the land in Tanzania (8,808,771 ha, 85%) was planted with annual crops and the remaining 15% (1,550,798 ha) was under permanent crops. This implies that, planted land area is regularly worked out every year to prepare suitable seedbeds for planting. By contrast, the small land area planted with permanent crops indicates that most farmers depend on short term crops for both household food requirements and income generation. The total area of permanent crops planted by

smallholders and large scale farmers was 1,771,770 ha. However, permanent crop production was dominated by smallholders who cultivated 88% of the total area while only 12% of the area was planted by large scale farmers.

The total planted area under irrigation was 280,587 ha (277,820 ha on the Mainland and 2,777 ha in Zanzibar) representing only 3% of the total area with cultivated crops. A total of 280,597 ha were planted under irrigation (277,820 ha on the Mainland and 2,777 in Zanzibar). The largest areas planted with irrigation were in Kilimanjaro (36,607 ha), Mbeya (33,418 ha), Shinyanga (29,783 ha), and Arusha (29,783 ha). Moreover, the regions with the largest number of households using irrigation were Kilimanjaro (75,736) followed by Mbeya (47,568), Iringa (32,689) and Arusha (31,024). Other regions with households using irrigation (slightly more than 20,000 households) were Morogoro (27,765), Tanga (24,912), Ruvuma (20,354), Tabora (25,601), Shinyanga (26,541), and Mwanza (25,216).

Land cultivation was done by using various means including oxen/bulls, cows, donkeys, tractors and power tillers. In the overall, the use of these means was almost evenly distributed all over the country especially on the Mainland. The leading region in using oxen/bulls in land cultivation was Shinyanga with 8.8 percent of the total agricultural households followed by Mbeya (8.3%), Kagera (7.3%) and Mwanza (7.2%). In Zanzibar, the following were the leading regions in the use of oxen/bulls in land cultivation, North Pemba (24.8%), South Pemba (23.9%), and North Unguja (23.2%).

The planted area with improved seeds was 1,488,893 ha accounting for 17 percent of the total planted area. On the other hand, the planted area without improved seeds was 7,319,878 ha representing 83% of the total planted land area. Except Pwani, Kigoma, Kagera, Mwanza, and Mara regions on the Mainland where larger areas were planted with improved seeds in the long rains than during the short rains.

Fertilizer was only used on a low proportion of the area under cultivation. The use of fertilizer greatly varied across the regions. For example, organic fertilizer was widely used in Shinyanga (67,439 ha) followed by Singida (54,586 ha) and Tabora (53,339). On the other hand, Mbeya region was leading in the use of inorganic fertilizer with a total of 131,208 ha followed by Iringa (103,697ha) and Ruvuma (83,182 ha).

Insecticides were the most common pesticides used in the country accounting for 770,036 ha or 71 percent of the total planted area followed by herbicides (203, 175, 19%), and fungicides (105,124, 10%).

Farming households were involved in the selling of crops even though this varied across the regions. The regions with the highest percentage of households that sold crops were Kagera, Mbeya, Shinyanga, Mwanza, Tanga, Morogoro, and Dodoma. However, the majority (67%) of the households which reported various marketing problems indicated that too low open market prices as the most pressing marketing problem. Other reported problems were minor representing around 5% of the households including transport cost being too high (4.4%), crop markets being too far (4.9) and lack of transport (3%). The magnitude of each of these problems was felt more during the long rains than in the short rains.

The number of households which received extension advice was 3,849,829 while those which did not were 1,927,007 accounting for 67% and 33% of the households, respectively. Generally, access to extension advice by farming households varied greatly among regions. However, the proportion of households which received extension advice was highest in Dodoma (91.3%) followed by Kilimanjaro (83.2%), Manyara (82%), Iringa (80.4%), Arusha (80%), Mbeya (78.2%), and Dar es Salaam (73.8%). In contrast, the households which received the least extension advice were in Rukwa (48.8%), Lindi (40.8%), and Zanzibar (33.6%),

Soil erosion was a serious problem faced by the rural households. The number of households with soil erosion problems was 5,310,423 accounting for 91% of all the households. In contrast, only 528,219 or 9 percent reported not to have soil erosion problem. Kilimanjaro and Dodoma regions had the highest proportion of households with soil erosion (22.57%), followed by Manyara (21.78%), Dodoma (15.89%), and Iringa (14.69%).

Based on the results of the census, the following key findings/recommendations are presented:

- Considering the small proportion of area under irrigation, crop production remains largely dependent on rainfall.
- Use of inorganic fertilizers is quite limited compared to the use of organic fertilizers.
- There is need to encourage and promote organic farming.

- In terms of productivity, the crop sector became less productive compared to 2002/03.
- The frequency of census and surveys in the past has provided essential data for determining trends and making relevant recommendations. There is therefore a great need to carry out agricultural censuses on a regular basis in the future.
- Although access to public-based extension services at national level was high, there is need to address reasons behind low access to the services in some regions.

### **Country Profile**

This part of the report presents a short profile of Tanzania with particular attention paid to general information on land, climate, administrative set-up and population.

- **Geographical Location**

Tanzania lies South of the Equator between the great lakes Victoria, Tanganyika and Nyasa on one hand and the Indian Ocean on the other. It has frontiers with Kenya and Uganda to the North, Rwanda, Burundi and Democratic Republic of Congo to the West as well as Zambia, Malawi, and Mozambique to the South West and South respectively. Furthermore, Tanzania is located in the Eastern Africa region between Longitudes 29<sup>0</sup> and 41<sup>0</sup> East and Latitudes 1<sup>0</sup> and 12<sup>0</sup> South.

- **Land Area**

Tanzania has an area of approximately 945,000 km<sup>2</sup> which includes approximately 60,000 km<sup>2</sup> of inland water. Out of the 945,000 km<sup>2</sup>, over 100,000 km<sup>2</sup> are devoted to reserves and national parks. The area of planted arable land is 9.5 million hectares.

- **Geographical Features**

The country has a vast central plateau sloping down towards the Indian Ocean. Except for a narrow belt along the 900 kilometers of the coastline, most of the land lies above 200 m altitude, and much of the country is higher than 1,000 meters above sea level. In the North there is Mt. Kilimanjaro, with a permanent ice cap, rises to over 5,500 meters with the highest peak Kibo reaching 5,895 meters. A distinctive feature of Tanzania is the Rift Valley. The great valley runs from near the mouth of the Zambezi River northwards through Tanzania, Kenya, Ethiopia, and across the Red Sea to Israel. The predominant types of vegetation include woodland, bushland, and grassland.

- **Climate**

The main climatic feature is the long dry spell from May to October, followed by a period of low rainfall which is often concentrated into relatively few days of heavy showers. The main rain season on the coast is from March to May but there is a second season from October to December. Total rainfall increases towards the North and around Lake Victoria rainfall is well distributed throughout the year with a peak experienced during March to May. The hottest and coolest period is October to mid-March and from June to September respectively. However, the range of temperatures is fairly limited and it is always hot between 25<sup>0</sup>C and 30<sup>0</sup>C on the coast and between 22<sup>0</sup>C and 27<sup>0</sup>C in the North.

- **Administrative Set-up**

By 2007/08, Tanzania Mainland was divided into 21 administrative regions namely: Dodoma, Arusha, Kilimanjaro, Tanga, Morogoro, Pwani, Dar es Salaam, Lindi, Mtwara, Ruvuma, Iringa, Mbeya, Singida, Tabora, Rukwa, Kigoma, Shinyanga, Kagera, Mwanza, Mara and Manyara. Each region is divided into districts (rural and urban). In total, there were 119 administrative districts and five cities – Dar es Salaam, Mwanza, Mbeya, Tanga and Arusha. The country has 120 ethnic groups with Kiswahili the official language. However, English is also used.

- **Population**

The last population and housing census was conducted in August 2002. According to the 2002 census, the population of Tanzania Mainland was 34.6 million giving an annual growth rate of 2.9 percent.

- **Agriculture**

The country's economy is heavily dependant on agriculture, which accounts for about 26% (down from 34.8% reported during the 2003 survey) percent of the GDP (the value of all goods and services produced by all factors of production resident in the country in one year) and about two-thirds of the total exports.

Agriculture is largely rainfed under which a variety of crops are produced mainly for subsistence. The main food crops grown in the country are maize, sorghum, millet, cassava, sweet potatoes, bananas, pulses, paddy and wheat. Cash crops are also grown and these include coffee, tea, tobacco, cotton and cashew nuts.

## **1.0 BACKGROUND INFORMATION**

Agriculture is an important economic sector of the Tanzanian economy as it provides the main source of food, employment, raw materials for industry, and an important source of foreign exchange earnings. Since Tanzania is endowed with a diversity of climatic and geographical zones, farmers grow a wide variety of food, cash crops as well as fruits, vegetables and spices. The contribution of crops sector to the national GDP is estimated at 18.2% (The Economic Survey 2008).

This report (Volume II) covers the Crop Sector at national level and includes Zanzibar estimates. It is divided into five main sections: Executive Summary, Introduction, Results, Conclusion and Recommendations and Appendices. The definitions relating to all aspects of this report can be found in the questionnaire (Appendix I). Other census reports include the Technical Report (Volume I), Livestock Sector Report (Volume III) and Large Scale Farms Report (Volume IV).

## **1.2 Introduction**

In 2007, the Government of Tanzania launched 2007/08 National Sample Census of Agriculture as an important part of the Poverty Monitoring Master Plan. This plan supports the production of statistics for advocacy of effective public policy, including poverty reduction, access to services, gender and other planning purposes. The census is intended to support and fill in the information gap necessary for planning and policy formulation by high level decision making bodies. Besides, it is meant to provide critical data indicators for monitoring Agricultural Sector Development Programme (ASDP) and other agricultural and rural development programmes as well as prioritizing specific interventions for agriculture and rural development – based programmes.

Following the decentralization of the Government's administration and planning functions, there has been a pressing need for agricultural and rural development data disaggregated at regional and district level. The provision of district level estimates provides essential information on the state of agriculture that support decision making by the Local Government Authorities and in the design of District Agricultural Development Programmes (DADPs) and District Agricultural Sector Investment Projects (DASIPs). The increase in investment is an important element in the National Strategy for Growth and Reduction of Poverty (NSGRP)

The 2007/08 Agriculture Sample Census was designed to meet the data needs of a wide range of users down to district level including policy makers at local, regional national levels, rural development agencies, funding institutions, researchers, NGOs, farmers organizations, and the like.

The dataset is both extensive in its sample and detailed in its scope to meet the user demand.

The census was carried out in order to:

- To identify structural changes if any, in the size of farm household holdings, crop and livestock production, farm inputs and implement use. It also seeks to determine if there are any improvement in rural infrastructures and the level of agriculture household living conditions.
- Provide benchmark data on productivity, production and agricultural practices in relation to policies and interventions promoted by the Ministry of Agriculture and Food Security and other stakeholders.
- Establish baseline data for the measurement of the impact of high level objectives of the Agriculture Sector Development Programme (ASDP), National Strategy for Growth and Reduction of Poverty and other rural development programs and projects.

### **1.2.1 Census Coverage and Scope.**

The 2007/08 Agricultural Sample Census was conducted for both large and small scale farms. This report covers small scale farms in details with some summary data from large scale farms in order to provide complete national estimates for some variables e.g. total livestock populations. The data was collected from a sample of 52,635 small scale agriculture households of which 48,880 were from the mainland and 4,755 from Zanzibar. Data was also collected from 1006 Large Scale Farms (968 on the Mainland and 38 in Zanzibar) on a complete enumeration basis.

Three different questionnaires were used to collect data on agriculture and related aspects. These were:

- Small scale farms questionnaire
- Community questionnaire
- Large scale farm questionnaire

The small scale farm questionnaire was the main census instrument and includes questions related to crop and livestock production and practices; population demographics; access to services, resources and infrastructure; and issues on poverty, gender. Main subjects covered during the study include:-

- Household demographics and activities of the household members.
- Land access/ownership/tenure and use
- Crop and livestock production and productivity
- Access to inputs and farming implements
- Access and use of credits
- Access to infrastructure (roads, district and regional headquarters, markets, advisory services, schools, hospitals, veterinary clinics)
- Crop marketing, storage and agro-processing
- Tree farming, agro-forestry and fish farming
- Access and use of communal resources (grazing, communal forest, water for human and livestock, beekeeping).
- Investment activities: Irrigation structures, water harvesting, erosion control, fencing.
- Off farm income and non agriculture related activities
- Household living conditions (housing, sanitary facilities, etc)
- Livelihood constraints Gender issues.
- Poverty Indicators

The community level questionnaire was designed to collect village data such as access and use of common resources, community tree plantation and seasonal farm gate prices. Large Scale Farm questionnaire was administered to all large scale farms either privately or corporately managed. Some data from the Large Scale Farm questionnaire is incorporated in this report, however, an in depth analysis of Large Scale Farms is presented in a separate report (Volume V).

### **1.3 Census Methodology**

The main focus at all stage of census execution was on data quality and this is emphasized all the time. The main activities undertaken include:

- Census organization
- Tabulation plan preparation

- Sample design
- Design of census questionnaire and other instruments
- Pilot test
- Training of trainers, supervisors and enumerators
- Information Education and Communication (IEC) campaign
- Data collection
- Field supervision and consistency checks
- Data processing:
  - Scanning
  - Structure formatting application
  - Batch validation application
  - Manual data entry application
  - Tabulation preparation using SPSS
- Table formatting and charts using Excel, maps generation using Arc GIS and Excel Report preparation using Word and Excel

### **1.3.1 Census Organization**

The census was conducted by the National Bureau of Statistics (NBS) in collaboration with Ministries of Agriculture, Food Security and Cooperatives, Livestock and Fisheries Development; Water; Industry and Trade; and Prime Minister's Office, Regional Administration and Local Government in Tanzania Mainland. The Office of the Chief Government Statistician, (OCGS), Ministries of Agriculture and Natural Resources Livestock and Fisheries in Zanzibar. At the national level the Census was headed by the Director General of the National Bureau of Statistics in collaboration with the Chief Government Statistician, Zanzibar. The planning Group formed by the Director General of NBS and Chief Government Statistician consisted of staff from the Department of Agriculture Statistics of NBS, Department of Economic Statistics of OCGS, Department of Policy and Planning of the Ministry of Agriculture, Food Security and Cooperatives, Department of Policy and Planning of Ministry of Livestock and Fisheries Development in Tanzania Mainland. Ministry of Livestock and Fisheries and Ministry of Agriculture and Natural Resources in Zanzibar. The Planning Group was responsible for all census operations. Implementation on census activities at the regional level was overseen by the Regional Statistical Managers of NBS and the Regional Agriculture Supervisor from the Prime Minister's Office, Regional Administration and Local Government. At the district

level the Census activities were managed by two supervisors from the Prime Minister's Office, Regional Administration and Local Government (PMO-RALG). The supervisors managed the enumerators who also came from PMO-RALG. As for Zanzibar, the implementation of the census activities at regional level was overseen by the Regional Statistical Officers and Regional Agriculture Officers. At District level the implementation of the census activities were managed by District Agriculture Development Officers (DADOs). In addition, there was a national mobile team to supervise census operations.

The Census and Survey Technical Working Group (CSTWG) under MKUKUTA provided support in sourcing financing, approving budget, allocation and monitoring the progress of the Census. A Technical committee for the census was established with members from key stakeholder organizations and its function was to approve the proposed instruments and procedures developed by the Planning Group. It also approved the tabulation and analytical reports prepared from the Census data.

### **1.3.2 Tabulation Plan Preparation**

The tabulation plan was developed considering the tabulations from previous census and surveys to allow trend analysis and comparisons as well as the needs of end users.

### **1.3.3 Sample Design**

The mainland sample consisted of 3,192 villages. These villages were drawn from the National Master Sample (NMS) developed by the National Bureau of Statistics (NBS) to serve as national framework for the conduct of household based surveys in the country. The National Master Sample was developed from the 2002 Population and Housing Census. The total Mainland sample was 47,880 agricultural households. In Zanzibar a total of 317 Enumeration Areas (EAs) were selected and 4,755 agriculture households were covered. National wide, all regions and districts were sampled except four (three from Mainland and one from Zanzibar).

In both Mainland and Zanzibar, a two stage sample was used. The number of villages/Enumeration Areas (EAs) was selected for the first stage with a probability proportional to the number of villages/EAs in each district. In the second stage, 15 households were selected from a list of

households in each village/EA using systematic random sampling. Table 1.1 gives the sample size of households, villages and districts for Tanzania Mainland and Zanzibar.

**Table 1.1: Census Sample**

Description	Mainland	Zanzibar	Total
Households	47,880	4,755	52,635
Villages/EA's	3192	317	3,509
Districts	133	9	142
Regions	21	5	26

### 1.3.4 Questionnaire Design and other Census Instruments

The questionnaire was designed following users meetings to ensure that the questions asked were in line with the user data needs. Several features were incorporated into the design of the questionnaire to increase the accuracy of the data.

- Where feasible all variables were extensively coded to reduce post enumeration coding error.
- The definition for each section were printed on the opposite page so that the enumerator could easily refer to the instructions whilst interviewing the respondent
- The response to all questions was placed in boxes printed on the questionnaire, with one box per character. This feature made it possible to use scanning and Intelligent Character Recognition (ICR) technologies for data capture.
- Skip pattern were used to reduce unnecessary and incorrect coding of sections which do not apply to the respondent
- Each section was clearly numbered, which facilitated the use of skip patterns and provide a reference for data type coding for the programming of CSPro and SPSS

Three other instruments were used:

- Village Listing Forms were used for listing households in the village/EA and from this list a systematic sample of 15 agricultural households were selected.

- A training manual which was used by the trainer for the cascade/pyramid training of supervisors and enumerators
- Enumerator Instruction Manual was used as reference material

### **1.3.5 Field Pilot-testing of the Census Instruments**

The questionnaire was pilot-tested in four locations (Arusha, Dodoma, Unguja and Pemba). This was done to check the wording, flow and relevance of the questions and to finalize crop lists, questionnaire coding and manuals. In addition, several data collection methodologies had to be finalized, namely, livestock numbers in pastoral communities, mixed cropping, use of percentages in the questionnaire and finalizing skip patterns and documenting consistency checks.

### **1.3.6 Training of trainers, Supervisors and Enumerators**

During training, a cascade/pyramid training techniques were employed to maintain statistical standards. The top level of training was provided to 78 national and regional supervisors (65 from Mainland and 13 from Zanzibar). The trainers were members of the Planning Group from the National Bureau of Statistics, the sector Ministries of Agriculture and Office of the Chief Government Statistician, Zanzibar. In each region, three training sessions were conducted for the district supervisors and enumerators. The training concentrated on questionnaires, listing forms, field level census methodology and definitions. Emphasis was placed on consistency checking in the field. Tests were given to the enumerators and supervisors and the best 50 percent of the trainee were selected for the actual field work. The remaining 50% were assigned the work of listing the households in the villages they belong and they were later terminated. The best trained enumerators were assigned to list the remaining villages. Each enumerator was assigned to enumerate two villages.

### **1.3.7 Information, Education and Communication (IEC) Campaign**

Radio, television, newspaper, leaflets, T-shirts and caps were used to create awareness of the Agricultural Sample Census to the public. This helped in sensitizing the public for the field level activities in order to increase the response rate. The T-shirts and caps were given to the field staff and the village chairpersons. The village chairperson assisted to locate the selected household.

### **1.3.8 Data Collection**

Data collection activities for 2007/08 Agricultural Sample Census lasted for three months from June to August 2009. The interview method was used to collect data during census. Data collection was monitored by a hierarchical system of supervisors which included the Mobile Response Team, Regional and District Supervisors. The Mobile Response Team headed by the Manager of agriculture Statistics Department, provided overall direction to the field operations and responded to queries arising outside the scope of the training exercise. Decisions made on definitions and procedures were then communicated back to all enumerators via the Regional and District Supervisors. On the mainland, each region had 2 Regional Supervisors (total of 42) and 2 district supervisors per district (Total 266).

District supervision and enumeration were performed by staff from the Prime Minister's Office, Regional Administration and Local Government and the sector Ministry of Agriculture (PMO-RALG). Regional and national supervision was provided by senior staff from the NBS and sector Ministries of Agriculture. In Zanzibar, the enumeration was conducted by staff from the Ministry of Agriculture and Natural Resources and Ministry of Livestock and Fisheries. Supervision was provided by senior officers of the same Ministries and the Office of the Chief Government Statistician.

During the household listing exercise, 3,192 extension staff Participated on the Mainland. A total of 177 enumerators participated during listing exercise and enumeration of the small holder questionnaire in Zanzibar. A total of 1,596 enumerators were involved in data collection of the small holder questionnaire on the Mainland. Additional five percent enumerators were held as reserves in case of drop outs during the enumeration exercise.

### **1.3.9 Field Supervision and Consistency Checks**

Enumerators were trained to probe the respondents until they were satisfied with the responses given before they recorded them in the questionnaire. The first check of the questionnaire was carried out by enumerators in the field during enumeration, followed by District, Regional and National supervisors. Supervisory visits at all levels of supervision focused on checking on the completeness of the questionnaires and consistency. Inconsistencies encountered were corrected,

and where necessary a call back to the respondent was made by the enumerator to obtain the correct information. Further quality control checks were made by the supervisors in the district

### **1.3.10 Data Processing**

Data processing involved the following process:

- Data entry
- Data structure formatting
- Batch validation
- Tabulation

#### **Data entry**

Scanning and ICR data capture technology was used. This did not only increase the speed of data entry but also increased the accuracy due to reduction of keystroke errors. Interactive validation routines were incorporated into the ICR software to trap errors during the verification process.

Prior to scanning, all questionnaires underwent a manual cleaning exercise by checking that the questionnaire had a full set of pages, correct identification and good handwriting. A score was given to each questionnaire based on the legibility and the completeness of enumeration. This score will be used to assess the quality of enumeration and supervision.

CSPPro was used for data entry of questionnaires that were rejected by ICR extraction application.

#### **Batch validation**

A batch validation program was developed in CSPPro in order to identify inconsistencies within a questionnaire. This is in addition to the interactive validation during the ICR extraction process. The procedures varied from simple range checking within each variable to more complex checking between variables. After data cleaning, the tables were prepared based on a pre-designed tabulation plan.

#### **Tabulation**

Statistical Package for Social Sciences (SPSS) was used to produce the Census tables and Microsoft Excel was used to organize the tables and compute the additional indicators. Excel was also used to produce charts while Arc GIS was used for the maps.

**Report Writing**

The report writing was outsourced to Sokoine University of Agriculture. It focuses on the regional comparisons, time series and national estimates. Microsoft Excel was used to produce charts; Arc GIS and Excel were used to generate maps, whereas Microsoft Word was used to compile and write the report.

**Data quality Control**

A great deal of emphasis was placed on data quality throughout the whole exercise, from planning; questionnaire design, training supervision, data entry, validation and cleaning/editing. As a result of this, it is believed that the census is highly accurate and representative of what was experienced at the field level during the census year. With very few exceptions, the variables in the questionnaire are within the norms for Tanzania and they follow expected time series trends when compared to historical data.

**1.4 Funding Arrangements**

The Agricultural Sample Census was supported mainly by the Department for International Development (DFID) and Japan International Cooperation Agency (JICA) who financed most of the operational activities. Other funds for operational activities came from the Government of Tanzania, In addition, technical assistance was provided by the Food and Agriculture Organisation (FAO).

## 2.1 CROP RESULTS

### 2.1.1 Household Characteristics

#### 2.1.1.1 Demographics

The 2007/08 Agricultural Sample Census covered rural agriculture households only. The chapter contains details of rural agricultural smallholders in Tanzania in relation to demographics, household characteristics, literacy and education of the rural agricultural population, livelihood activities, off-farm income, agriculture credit, living conditions and access to resources. It therefore contains data on poverty issues and, where possible, it compares data with previous censuses and surveys.

The population of rural agricultural smallholder households in Tanzania is 31,013,026 (30,264,358 Mainland and 748,668 Zanzibar), of which, 15,487,217 are males (15,114,238 Mainland and 372,978 Zanzibar) and 15,525,810 are females (15,150,120 Mainland and 375,690 Zanzibar). According to population estimates/projections, the rural population has increased from around 15 million (1988 population and housing census) to approximately 25 million rural agricultural population in 2003 and 31 million in 2007/08 Agricultural Sample Census (table 2.1).

**Table 2.1 Number of Agricultural Household Members By Sex and Broad Age Group, 2007/08 Agricultural Year, Tanzania**

Age Group	Sex						Sex Ratio
	Male		Female		Total		
	Number	%	Number	%	Number	%	
Less than 4	2,162,414	14	2,127,332	14	4,289,746	14	1.02
5 - 14	4,792,811	31	4,547,310	29	9,340,121	30	1.05
15 - 64	7,868,086	51	8,246,542	53	16,114,627	52	0.95
65+	663,906	4	604,626	4	1,268,532	4	1.10
Total	15,487,217	100	15,525,810	100	31,013,026	100	1.00

#### 2.1.1.2 Population Trend and Structure

The rural population of Tanzania Mainland kept on increasing from post independence.

The 1967, 1978 and 1988 are the population and housing census data while the 2003 and 2008 data are the rural agricultural population projections/estimates. The increase between 1988 and 2008 shows a higher increase than that of between 1967 and 1988 (Chart 2.1).

The population pyramid (Chart 2.2) shows that the population of Tanzania is characterised by a young population. The chart shows that there is an out-migration of males from rural areas to urban areas in the 20 – 39 years age group. This could be due to persons looking for work in urban areas. The out-migration of female population in the same age group is less than that of males. This may be because males are always the first to migrate and female follow later.

Table 2.1 shows that about 44 percent of the 2008 population was below 15 years of age. The 15-64 years age group which participates most in production accounted for 52 percent of the rural agricultural population and only 4 percent of the population was above 65 years. The dependency ratio was 92 percent which is very high. Generally, countries that have very high birth rates also have high dependency ratios because of the

large proportion of children in the population. In 2008 the overall sex ratio of the rural agricultural population is 100 males for every 100 females compared to 99 males for every 100 females in 2002/03.

### 2.1.1.3 Household Size

The total number of rural agricultural households in Tanzania during 2008 is 5,838,523 compared to 4,901,837 during 2003 of which 5,706,329 were in the Mainland during 2008 and 4,805,315 in 2003, while 132,193 were in Zanzibar during 2008 and 96,522 in 2003. There were 4,651,702 male headed households during 2008 and 3,935,761 in 2003, while 1,186,820 female headed household in 2008 and 966,076 in 2003. The average household size for rural agricultural households in Tanzania is 5.3 members per household as compared to 5.2 during 2003.

Shinyanga Region is the leading region with the highest average persons per household (7.1) followed by Mwanza (6.8) and Tabora (6.4). Lindi and Mtwara regions have the smallest household sizes (4.1 and 3.8) respectively (Chart 2.3). The average household size for Zanzibar is 5.7 persons per household which is slightly higher than that of the Mainland. About 20 percent of the households in Tanzania are female headed households.

### 2.1.1.4 Marital Status

The total number of heads of households who were married in Tanzania are 4,613,959 (4,232,085 males and 381,875 female), those living together are 125,171 (97,193 males and 27,979 females), those who were separated are 313,774 (101,226 males and 212,548 females), while 529,396 (83,979 males and 445,417 females) heads of households are widowed. Out of the total of 5,838,523 heads of agricultural households in Tanzania, 4,504,359 (4,132,230 males and 372,129 females) were married in the Mainland and 109,600 (99,854 males and 9,746 females) were married in Zanzibar.

The marital status question was asked to all members of the households, therefore, the not married category includes youngsters who represent 62 percent (Chart 2.4). The married were 32 percent, widowed, 3 percent, separated, 2 percent and living together 1 percent. The separated category includes those who were divorced.

### 2.1.1.5 Literacy and Education of Rural Agricultural Population

Information on literacy and education attainment were obtained from all persons aged five years and above in all the sampled households. Literacy in Tanzania is defined as the ability to read and write a simple sentence in Kiswahili only, English only, both English and Swahili or in any other language. The literacy rate is highest in Kiswahili with 65 percent of the rural agricultural population, followed by both Kiswahili and English (7.3%).

Generally literacy rate has increased from 61.2 percent in 2003 to 65 percent in 2008, while the rate for those who are able to read and write both Kiswahili and English has increased from 4.9 percent in 2003 to

7.3 percent in 2008. However literacy in any other languages is very low (less than 1%) (Chart 2.5). The percentage of those who were not able to read and write went down from 33.7 percent in 2003 to 26.7 percent in 2008. This shows an improvement in literacy.

The average literacy rate for the rural agricultural population in Tanzania is 73 percent compared to 59 percent of 2003. However, there exists regional differences with Kilimanjaro region having the highest literacy rate of 89 percent. This is followed by Dar es Salaam (88%), Mara and Iringa each with 80% and Ruvuma 79%. The regions with the lowest literacy rates were Tabora (64), Shinyanga (67), Rukwa(68) and Dodoma with 69 percent (Chart 2.6 and Map 2.6). The total literate rate for Zanzibar was 69 percent.

### 2.1.1.6 Education Status

In Tanzania, 41 percent of the of the rural agricultural population aged 5 years and above have completed a certain level of education compared to 30 percent in 2003 and 35 percent are still attending school compared to 30 percent in 2003.

The population that never attended school is 24 percent (Chart 2.7) compared to 40 percent in 2003. There is therefore an improvement in the status of education between the two censuses.

The rural agricultural population in Kilimanjaro region had the highest percentage of population aged 5 years and above who have either completed a certain level of education (51%) or were currently attending (39%) giving a total of 90% of the rural agricultural population with education (Chart 2.8). Dar es salaam was the second with highest percentage of the rural agricultural population that has completed a certain level of education (50%) and also has a high percentage of currently attending school (39%). Tabora region has the highest percentage (30%) of those who never attended. Zanzibar agricultural population had 34 percent of the total national rural agricultural population who have completed a

certain level of education, 37 percent were attending school and 29 percent never attended (including the youngsters).

### 2.1.2 Main Household Activity

The Main Household Activity is the activity for which most individuals in the rural agricultural community spend most of their time on. About 48.9% of the agricultural population spent most of their time on. Crop and seaweed farming activity followed by students (34.5 %). The unable to work/too old/retired/sick/disabled category is the third main activity with 10.0 percent. Fish Farming is the least activity performed by 0.01percent of the agricultural households (Chart 2.9).

sick/disabled category is the third main activity with 10.0 percent. Fish Farming is the least activity performed by 0.01percent of the agricultural households (Chart 2.9).

The involment in farming which one would expect the rural population to depend on, has a different picture (Chart 2.10). Only 48 percent of the rural household population works full-time on farm compared to 2003 with 68 percent followed by never work on farm (29%), rarely work in farm (19%) and work part time on farm (4%). The Never works on farm category has increased from 3 percent to 29 percent showing that the rural population has started shifting from agricultural activities to other activities.

### 2.1.3 Households Main Sources of Income

Results from the census (Chart 2.11) indicate that sale of food crops was the main cash income earning activity (61.6 percent in 2008 compared to 37.4% in 2003 of all the rural agricultural households), followed by sale of cash crops (9.9

percent compared to 17% in 2003) and other casual cash earnings (7.8 percent in 2008 compared to 15.1% in 2003). The leading source of cash income for Zanzibar was sale of food crops (31.4 percent in 2008 compared to 20.8 percent in 2003) followed by business income (12.8 percent in 2008 compared to 14.4 percent in 2003) and wages and salaries (12.6 percent in 2008 compared to 15.5 percent in 2003).

## 2.2 Agricultural Households

The results presented in this section is a summary on land use patterns, households engaged in crop production, the types of crops grown and the farming systems and crop husbandry practices in general.

According to 2007/2008 National Sample Census of Agriculture, a total of 5,838,523 households were engaged in agriculture (field and horticulture crop production, livestock and fish farming and pastoralism). Out of the sampled agricultural households, 5,706,329 (97.7%) were in the Mainland and 132,193 (2.3%) were in Zanzibar (Map 2.1). In the Mainland, large concentration of households engaged in agriculture were recorded in Shinyanga, Mbeya and Kagera regions each with between 400, 000 and 500,000 households, followed by Mwanza, Dodoma, Tanga and Iringa, with between 300,000 and 400,000 households. Dar es Salaam region had the least number of

households engaged in agriculture (35,160). In Zanzibar, large concentration of agricultural households was located in North Pemba district (32,895) and the least number was in Urban West district (18,651).

### 2.2.1 Types of Agricultural Households

At national level, crop production was the dominant agricultural activity which engaged 3,508,581 households (60.1%), followed by 2,268,255 (38.8%) households engaged in mixed crop and livestock, 57,770 (1%) households engaged in livestock only and only 3,917(0.1%) households were engaged in pastoralism (Chart 2.12). Of the total crop growing households, 3,422,072 (98%) were on the Mainland and 86,509 (2%) were in Zanzibar.

Across the country, Zanzibar had the highest agricultural households density (50 households per square km) followed by Dar es Salaam (24 households per square km). However, most of these areas are urbanized and hence not typical examples of agricultural households.

The least population density was observed in Lindi (2 households per square km), Ruvuma (3 households per square km), Tabora, Rukwa and Manyara each having 4 households per square kilometer (Map 2.2).

Within the regions and for the households engaged in crop production only, Lindi region had the highest percentage out of the total agricultural households in the region (89%), followed by Mtwara (86%), Morogoro (85%), and Dodoma (71%). (Chart 2.13a). Crop production only was the least important in Arusha, Kilimanjaro and Manyara regions where less than 40% of the households were engaged in this sub-sector. Across the country, very few households were engaged in livestock production only (Chart 2.13a).

Three regions in the Mainland had households that were engaged in livestock production only. The regions are Arusha 15.1%; Dar es Salaam 8.5% and Manyara 2.6%. In the overall, Zanzibar had 1.4% of its households engaged in livestock production only. Pastoralism was limited to few households (less than 1%) in the Mainland (Chart 2.13a and Map 2.7). The top three regions in pastoral activities were Kagera (0.6%), Arusha (0.4%) and Dar es Salaam (0.2%).

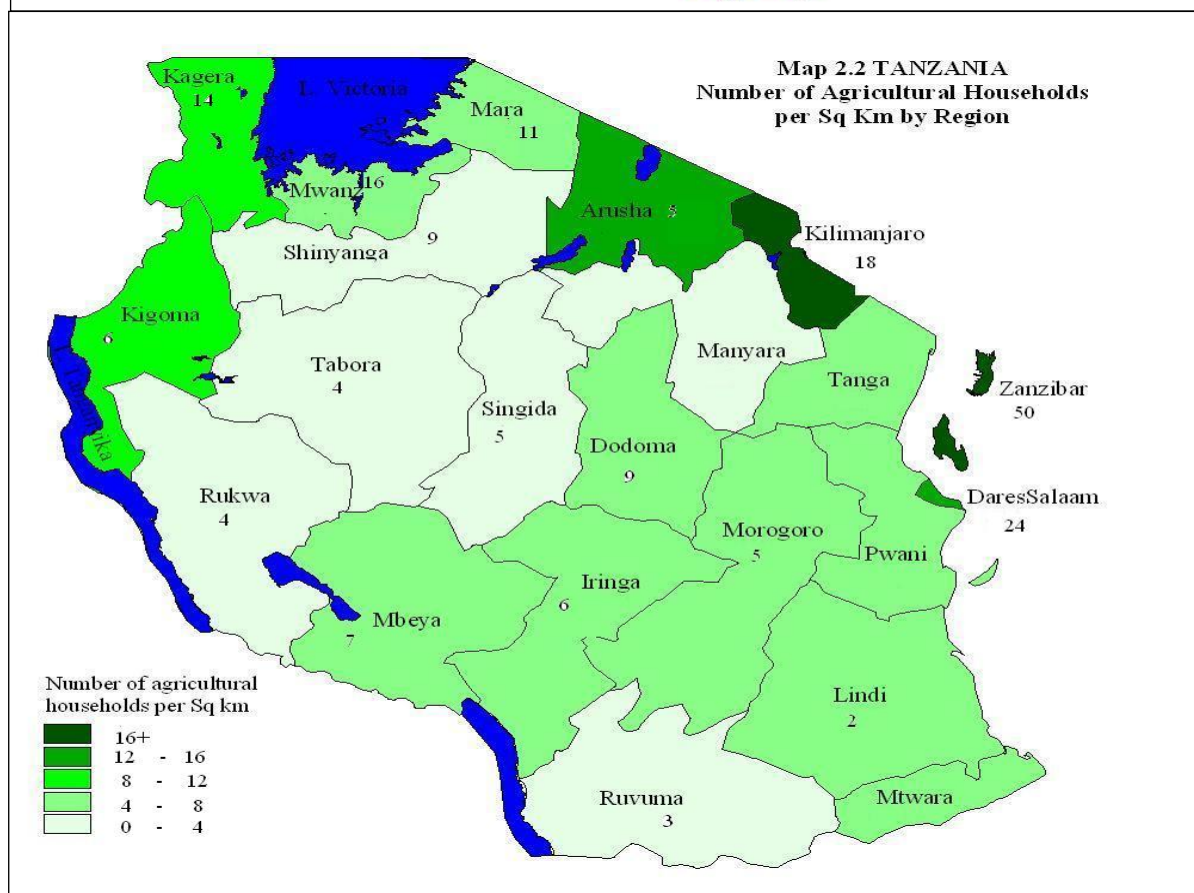

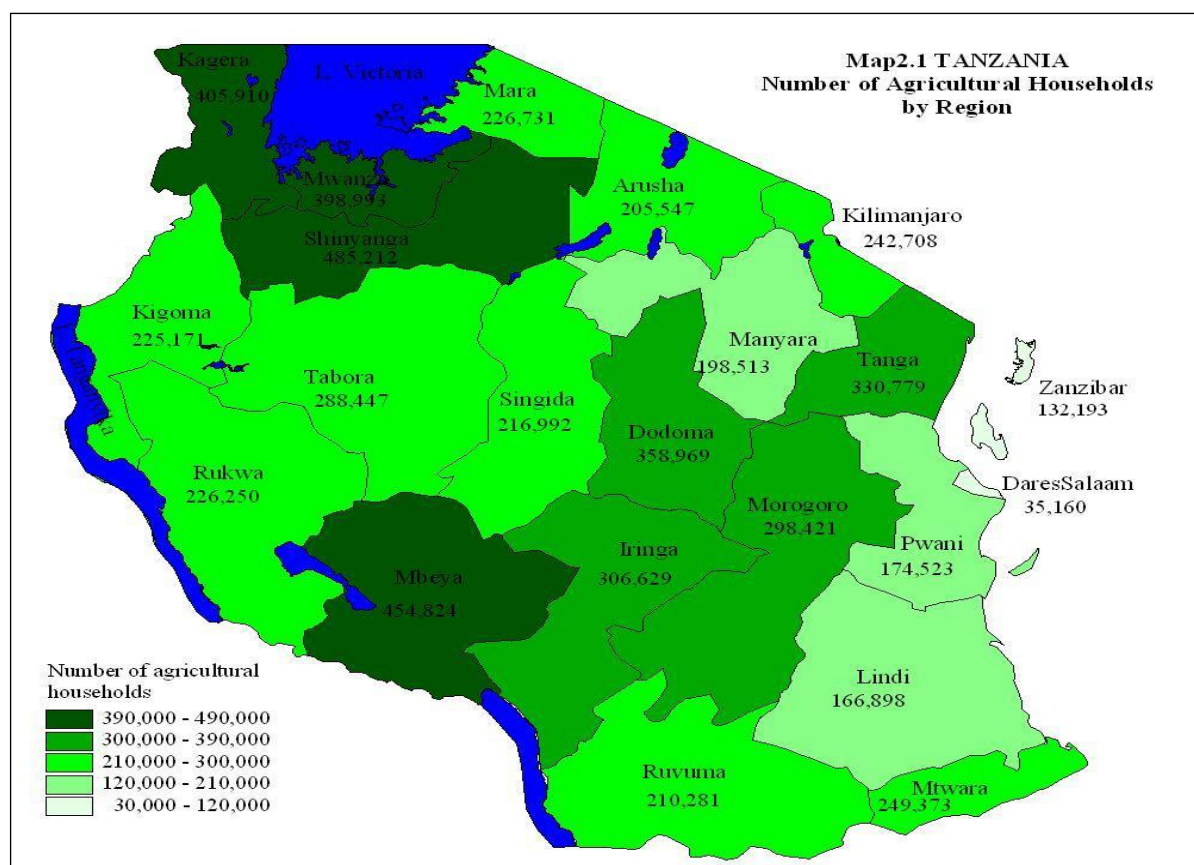

While all the regions had households that were engaged in both crop and livestock production in varying proportions (Chart 2.13b), the series data on households involved in crop production indicates a steady increase between 1994 and 2008.

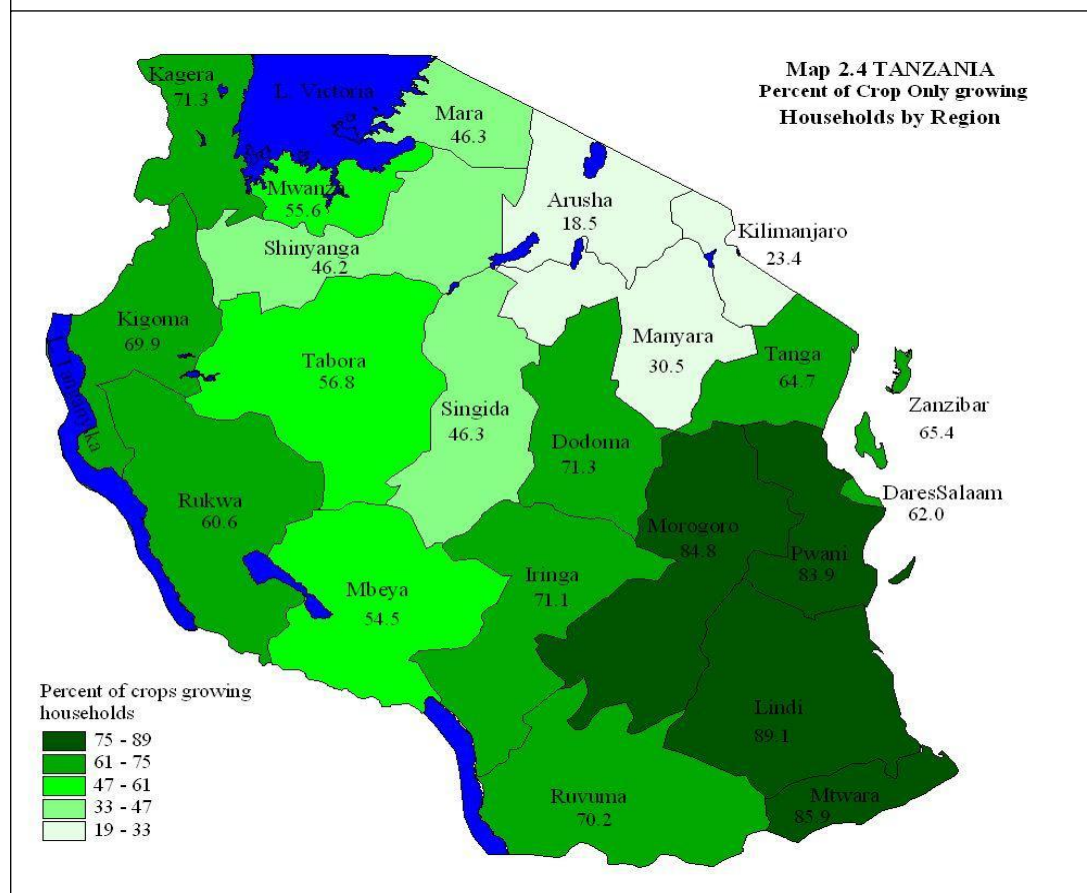

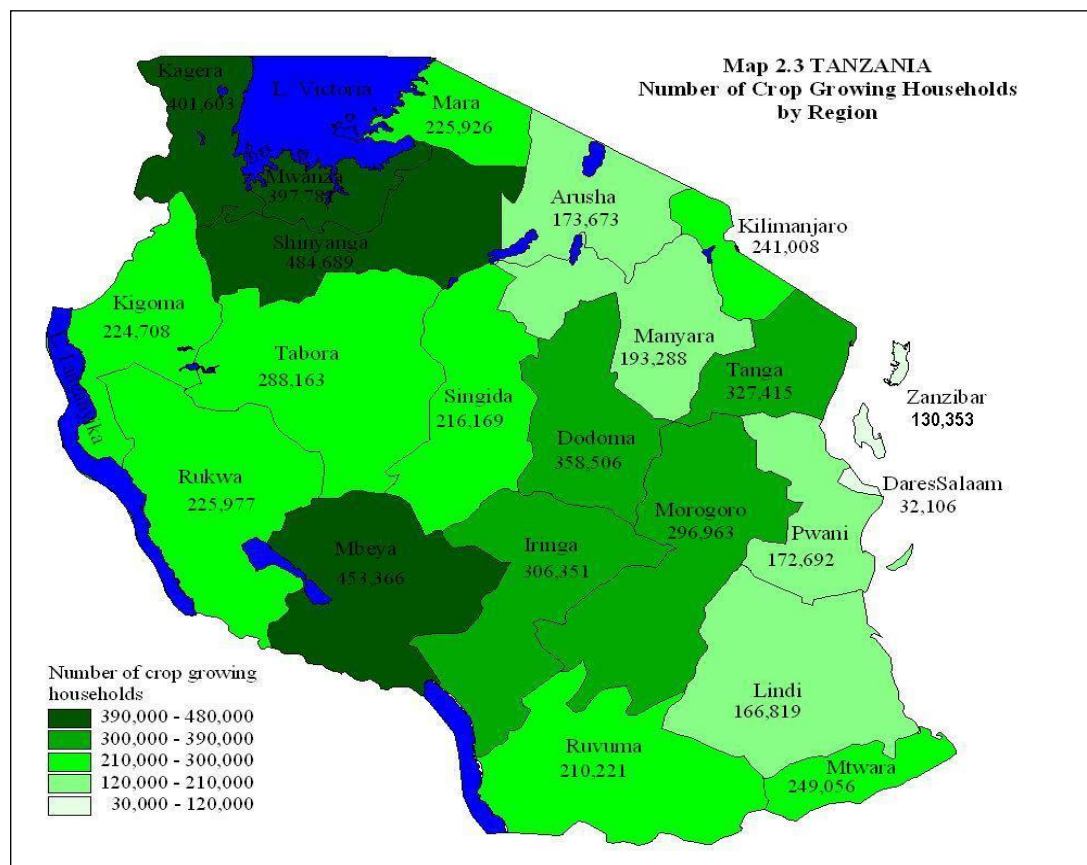

In the overall, crop production has remained the single most dominant type of agricultural activity since the mid - 1990's. Crop and livestock production has also increased between 1994 and 2003, with a pronounced increase between 2003 and 2008 (Chart 2.13b). During this period, an increase of about 565,505 households was reported to be

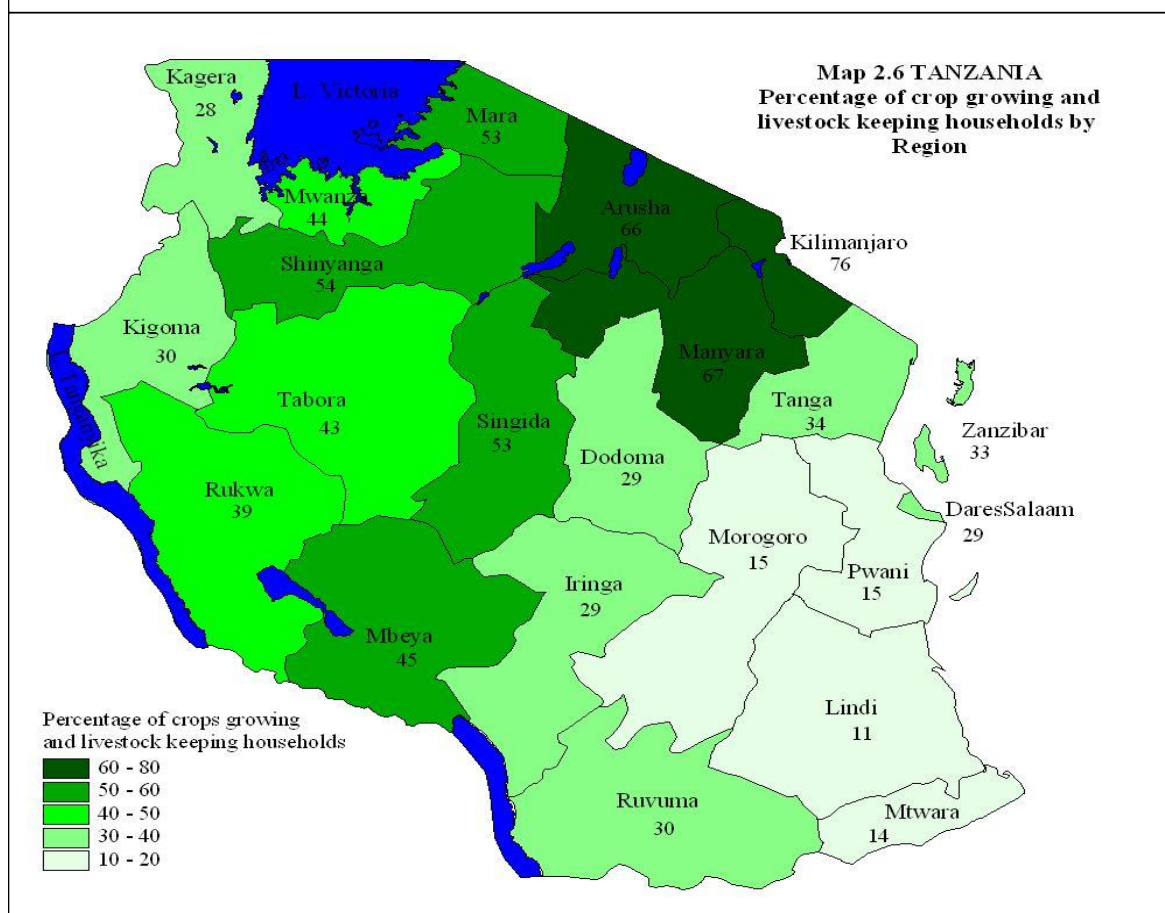

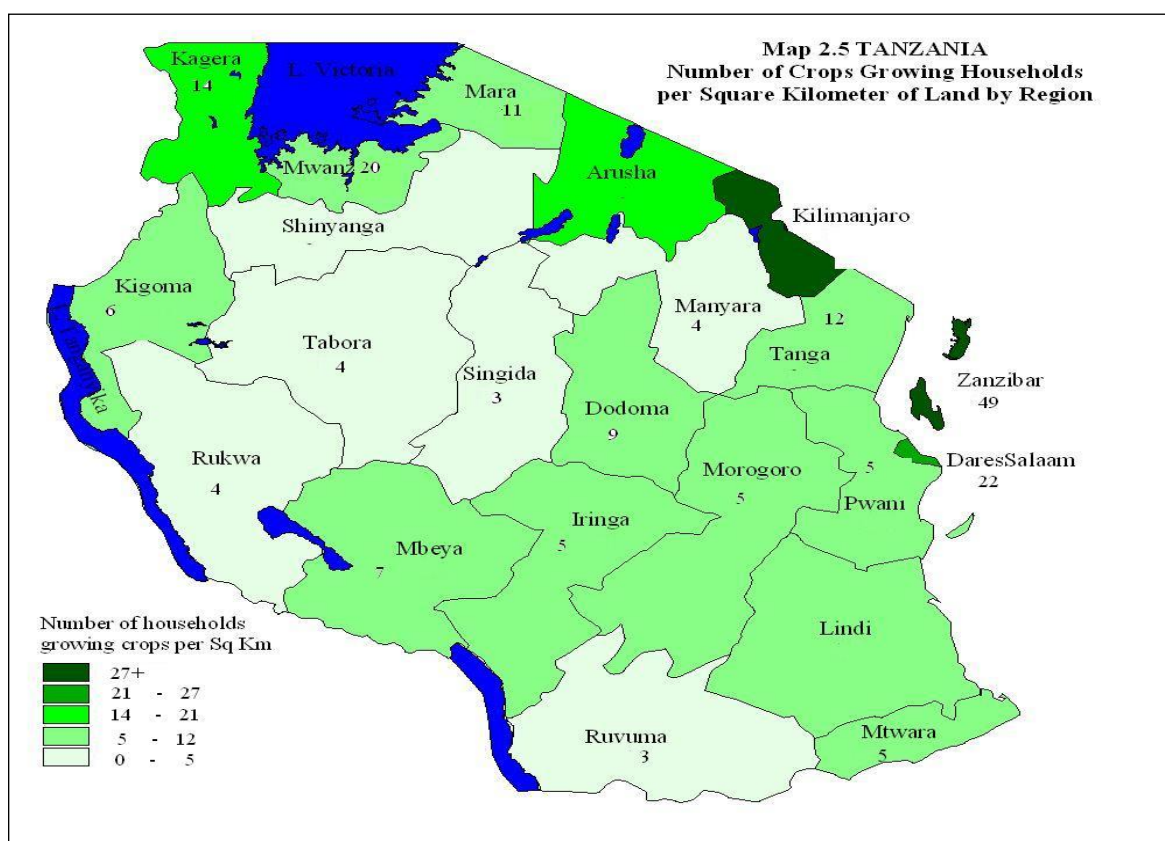

engaged in mixed crop and livestock keeping activities. The trend has remained the same with crops-only households dominating and the livestock-only households being the least.

## 2.3 Land Use

**Land use** is the human use of land. It involves the management and modification of natural environment or wilderness into a built up environment such as fields, pastures, and settlements. It has also been defined as "the arrangements, activities and inputs people undertake in a certain land cover type to produce, change or maintain it" (FAO/UNEP, 1999). <sup>[1]</sup> In this census, this variable attempts to indicate to what extent the land available to households is used for agricultural activities particularly with regard to the use the of the land for planting crops.

### 2.3.1 Area of Land Utilized

Nationally, the total usable land available was 14,642,284 ha of which 14,516,893 ha (99.1%) were located in the Mainland and 125,391 ha (0.9%) were located in Zanzibar. In all the Mainland regions and Zanzibar, the average land utilization was above 70% with Arusha, Kilimanjaro and Zanzibar each utilizing 90% or

more of the available land. Land utilization per household has remained constant at an average of 2 ha in 2002/03 and 2007/08 Agriculture Sample Censuses (Chart 2.14).

Total usable area refers to the land that the household has access to either by official title or

customary law. The land was used for various purposes including annual cropping, mixed annual and permanent cropping, pastures growing and fallow. However, the census agricultural results

<sup>1</sup> Land-use categories recognized in FAO's World Census of Agriculture (FAO/UNEP, 1999)

(2002/03 and 2007/08) have revealed that the country was predominantly occupied with annual crops. In the period 2007/2008, annual crops occupied (73%) compared to (69%) in 2002/2003.

Area for permanent crops has decreased to 8% from 14%, permanent and annual crops mixed have also decreased to 6% from 10% while fallow has increased to 14% from 7% (Chart 2.15).

However, large variations existed between regions whereby, in regions where land scarcity is less acute as in Shinyanga, Singida, Tabora, the total utilizable land remained slightly above the 2002/03 national average. In all the regions, there was an attempt to utilize almost the entire usable land available as the majority of the regions maintained a land utilization rate of between 80 and 100% (Map 2.8).

### 2.3.2 Land Use Sufficiency

At National level, about 66 percent of the agricultural households reported that all the available land to the households was used during 2007/08 agricultural year while the remaining 34 percent did not utilize all the available land (Chart 2.16a). Kilimanjaro, Dodoma, Mbeya and Manyara reported using all the available land by over 75 percent while Rukwa, Ruvuma and Tabora regions had below 50 percent.

For Zanzibar, those who reported using all the available land were 89 percent while those who didn't utilize all the available land were 11 percent. The level of utilization was above 90 percent except for North Pemba region which reported 85 percent.

Nationally, there are large differences in land pressure where as more than one third of the agricultural households (37%) indicated to have sufficient land available for their use and the remaining 63% considered the land to be insufficient (Chart 2.16b). Land sufficiency in Zanzibar was relatively better compared to the Mainland where 44% of the households indicated to have sufficient land.

Land sufficiency varied greatly between regions. In Mtwara, Lindi, Ruvuma, Pwani and Tabora regions at least 50% or slightly more of the households reported land sufficiency while all other regions reported land sufficiency below 50%. In the latter group, land scarcity was most acute in Arusha, Manyara, Mara and Kilimanjaro regions where more than 76% of the households complained of land insufficiency (Chart 2.16c).

### 2.3.3 Land Use Patterns

Out of the total land of 14,810,368 ha about 6,121,360 ha (41.3%) was planted with temporary or annual crops in monoculture (Chart 2.17 and Map 2.9). This is a slight increase when compared to 4,436,177 ha (37%) reported in 2002/2003 National Sample Census of Agriculture.

The land area under annual crops had increased from 69 percent 2002/03 to 73 percent in 2007/08 implying changes in land use with a general shift into temporal or annual crop production. Other land uses that covered 10% or more of the land were the mixed temporal or annual crops (16.4%)

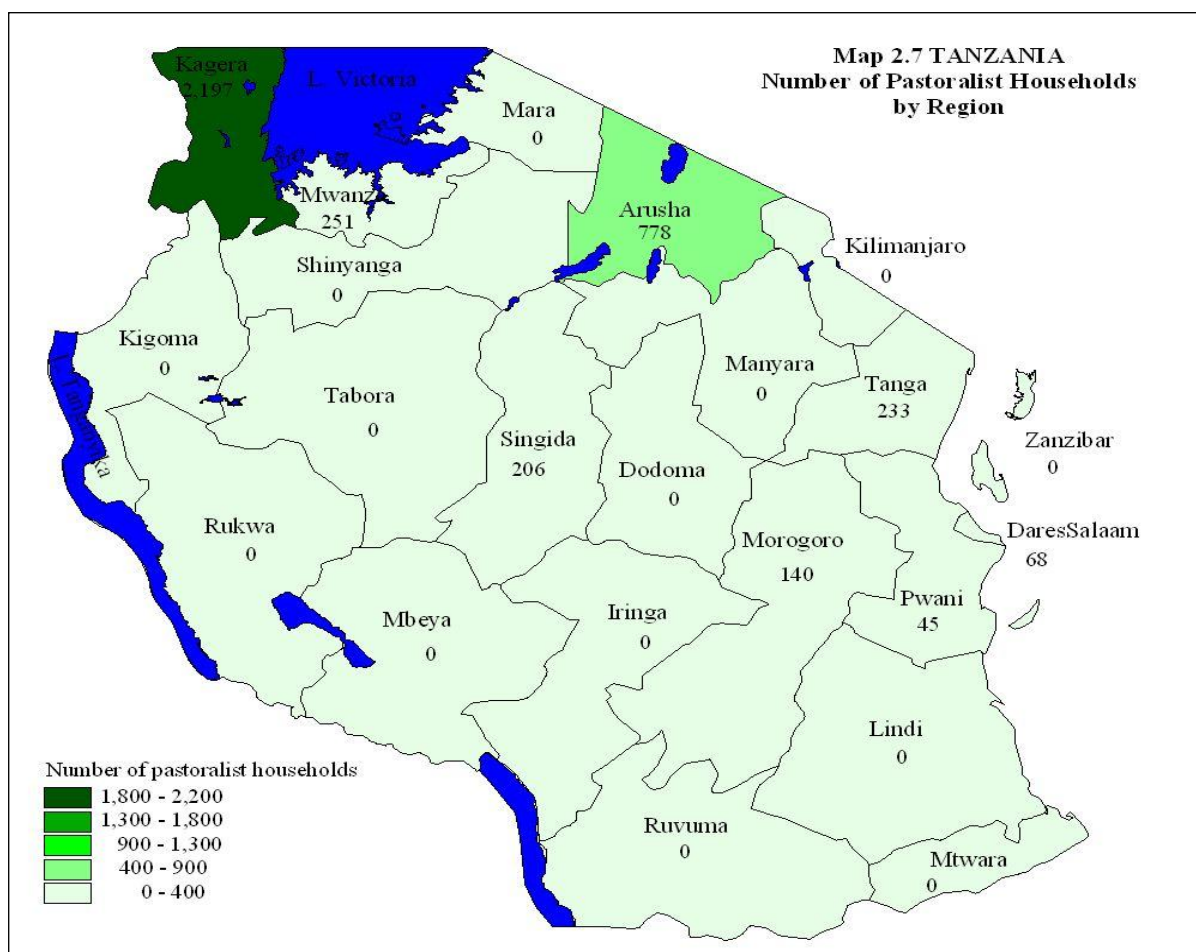

equivalent to 2,423,433 ha and area under fallow (10.8%) equivalent to 1,600,984 ha. About 23.9% of the land was not cultivated annually representing land under permanent plant cover of permanent crops, natural bush and planted trees (15.8%), uncultivated usable land (7%) and unusable land (1.13%).

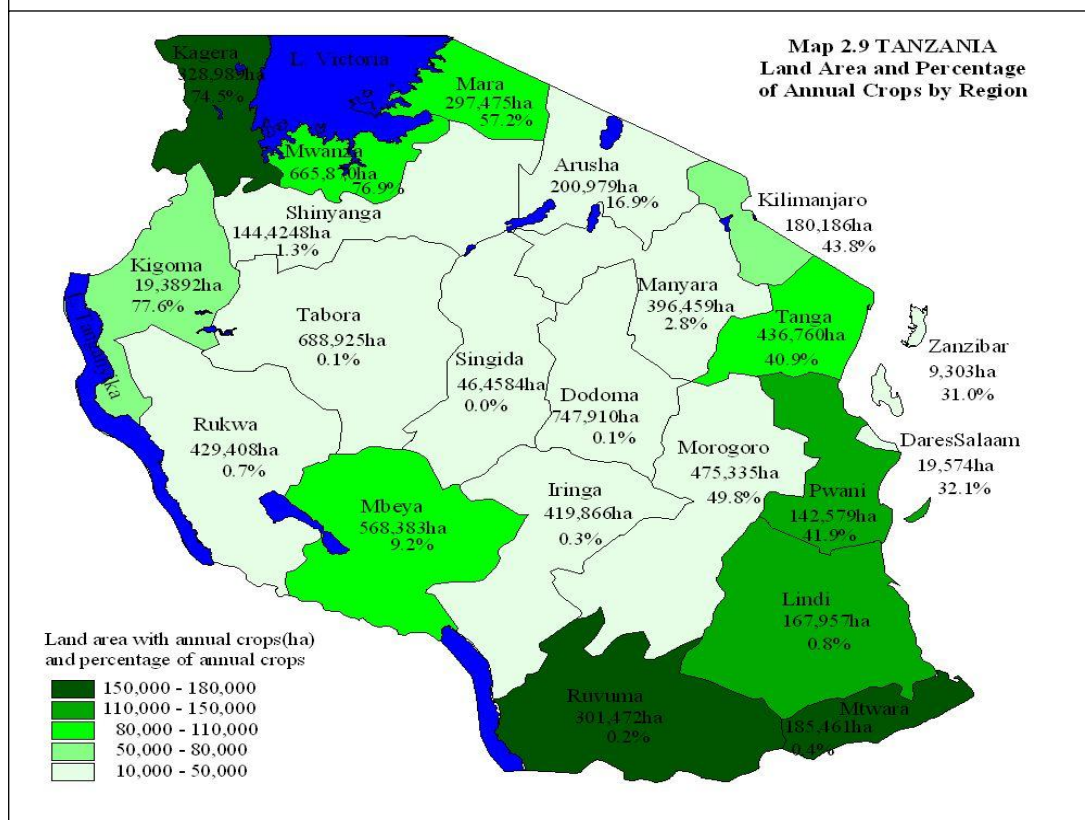

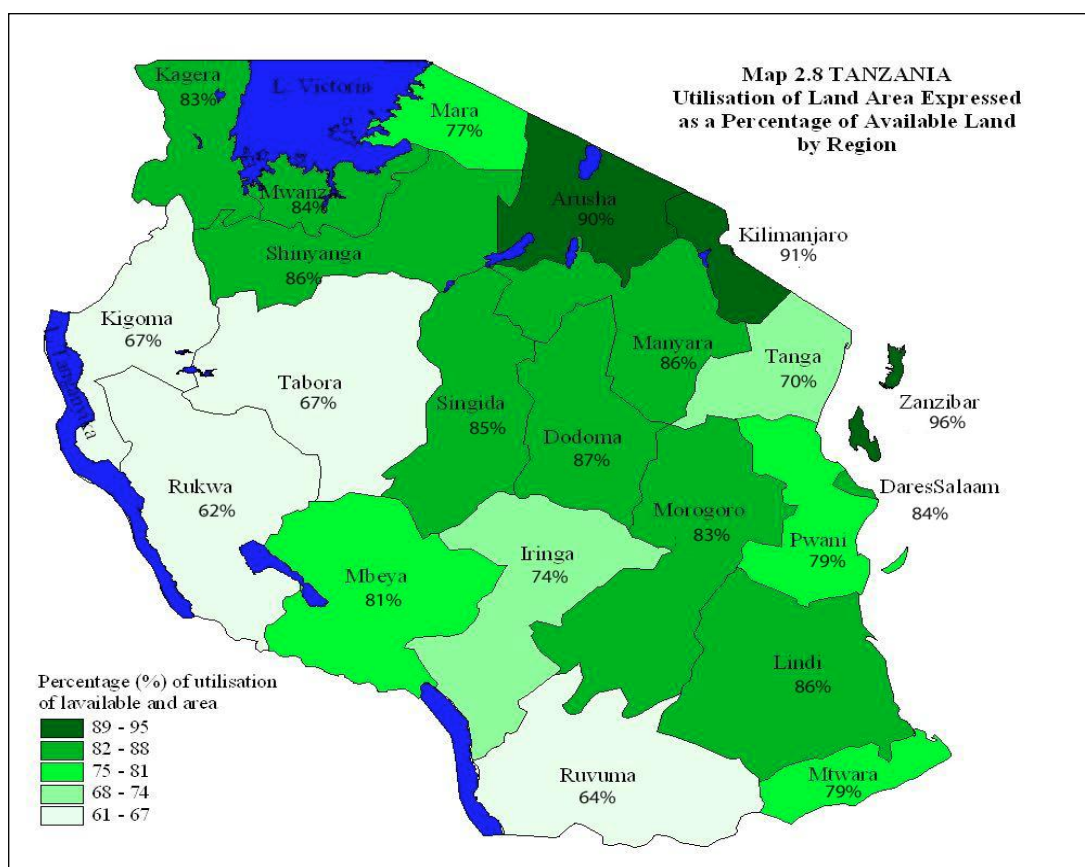

Amongst the regions, Shinyanga had the largest area of utilized land (1,922,968 ha), as was the case in in the 2002/03 period, of which about 65% (1,462,257 ha) was used for the production of

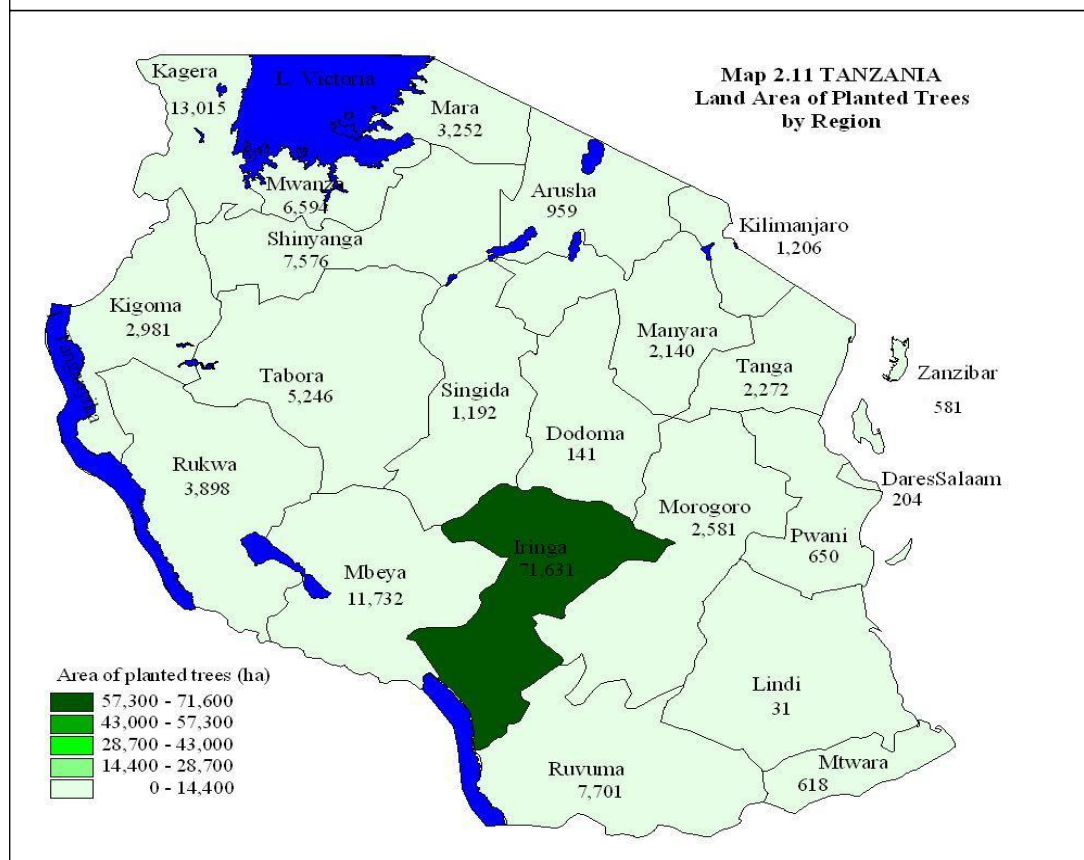

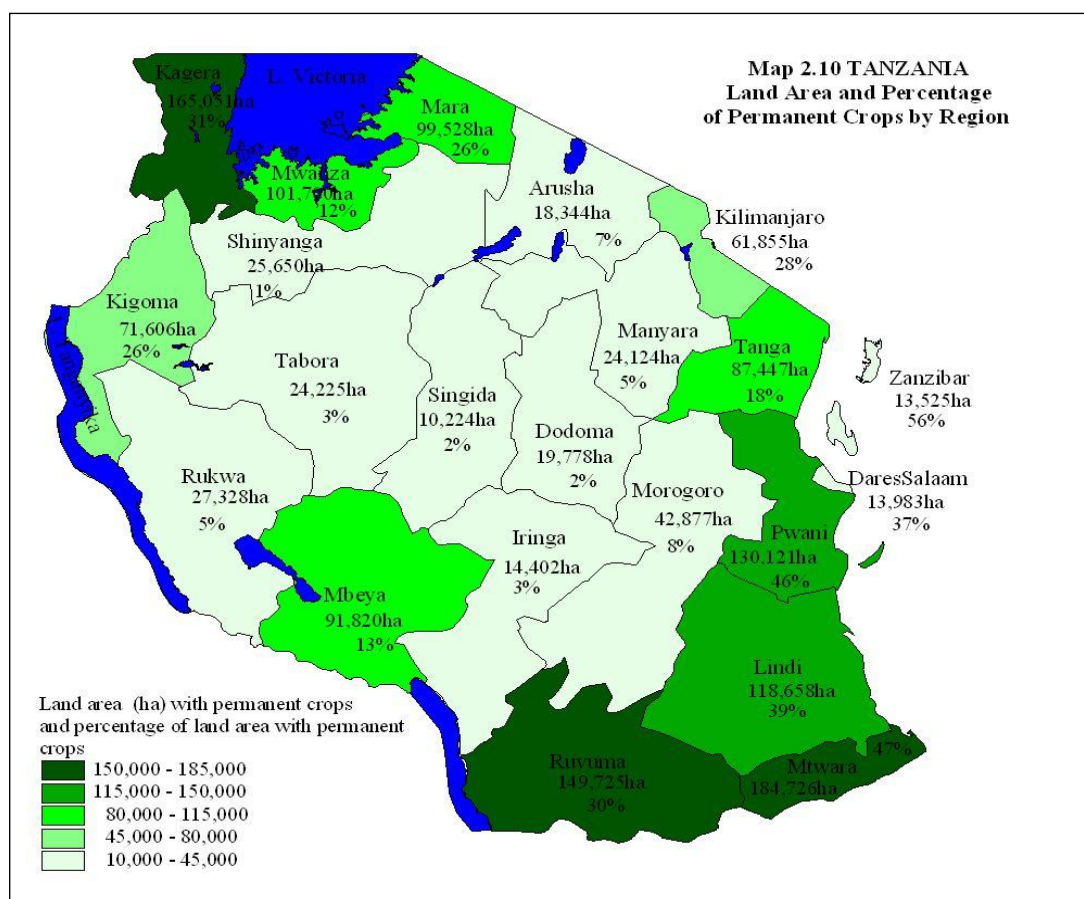

annual crops. In this region, the area under permanent mono crops and permanent mixed combined was 45,368 ha, area under pasture (350,225 ha), which was the largest amongst the

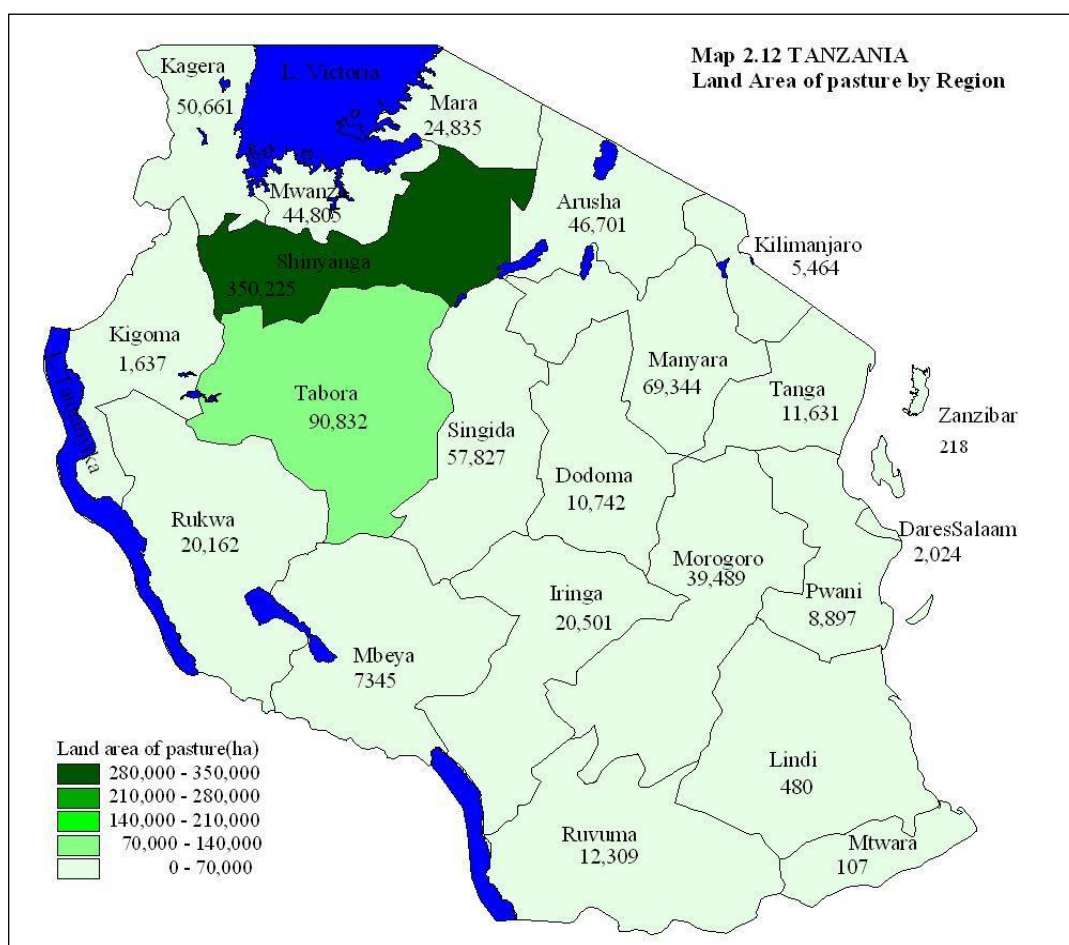

regions, followed by Tabora with 90,832 ha (Chart 2.18 and Map 2.12). Comparatively, regions engaged in the production of tree crops (coffee, tea, coconut, cashew and others), had large proportions of the planted areas under permanent crops. Zanzibar had the largest proportion of land under permanent crops (56%), while in other areas, Pwani and Mtwara regions each had between 41% and 50% of the planted land; Tanga and Mbeya regions each had between 11% and 20% area under permanent crops; Lindi region had 39%; and Mara, Kigoma, Ruvuma and Kilimanjaro had between 21% and 30%; (Map 2.10). All other regions had less than 10% of the land area planted with permanent crops. Land area under planted trees was highest in Iringa region (71,631 ha) and lowest in Lindi region (31 ha). Other regions with at least 5,000 ha under planted trees included Tabora, Shinyanga, Ruvuma, Kagera and Mbeya (Map 2.11).

## 2.4 Annual Crop Production

Annual crop production is practiced either in one or two seasons per year, depending on the rainfall pattern. Areas with a unimodal rain pattern receive only the main rainy season (Masika) while areas with a bimodal rain pattern receive rains in two seasons, one being the short rainy season (Vuli) and the other being the long or main rainy season (Masika).

As per 2007/08 Agricultural Sample Census data, Masika rains occur throughout the country during which the bulk of annual crop production was reported. The total annual planted area was 8,808,771ha (8,756,314 ha on the Mainland and 52,457 ha in Zanzibar). In the long rainy season, the total planted area was 80 percent compared to short rainy season with only 20 percent of the total planted area (Chart 2.19).

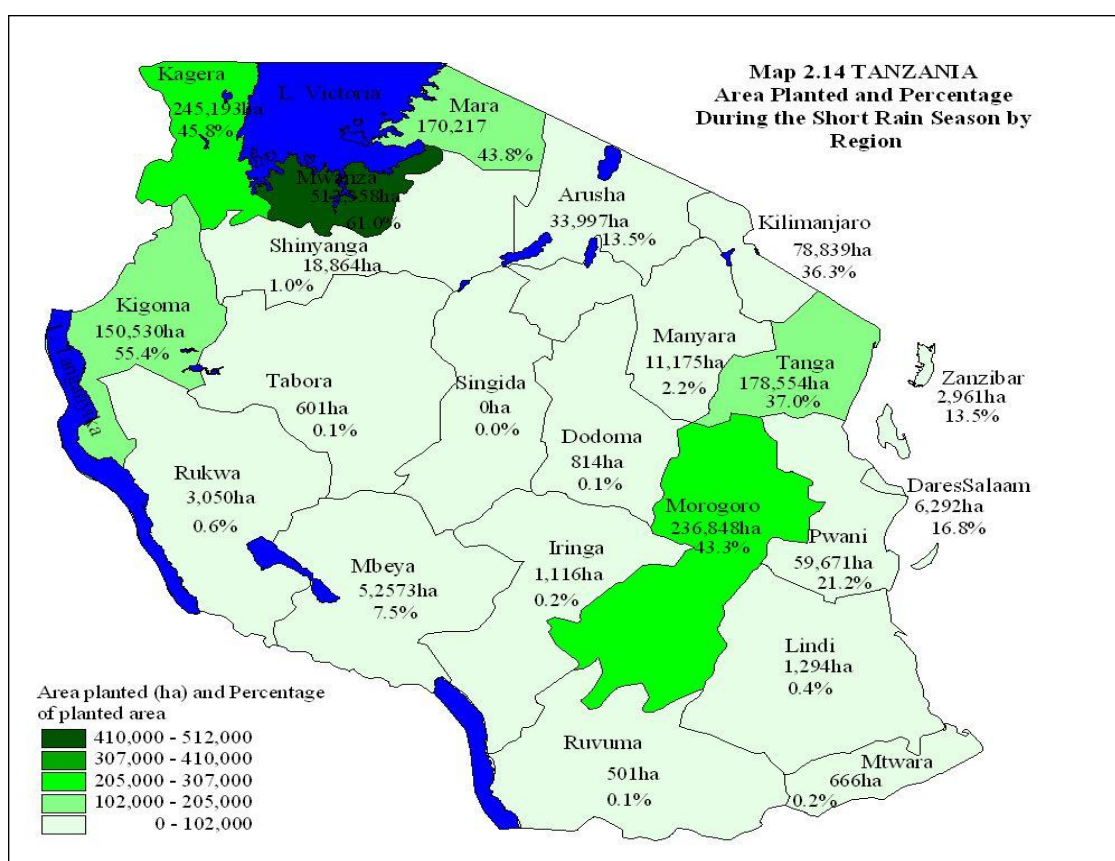

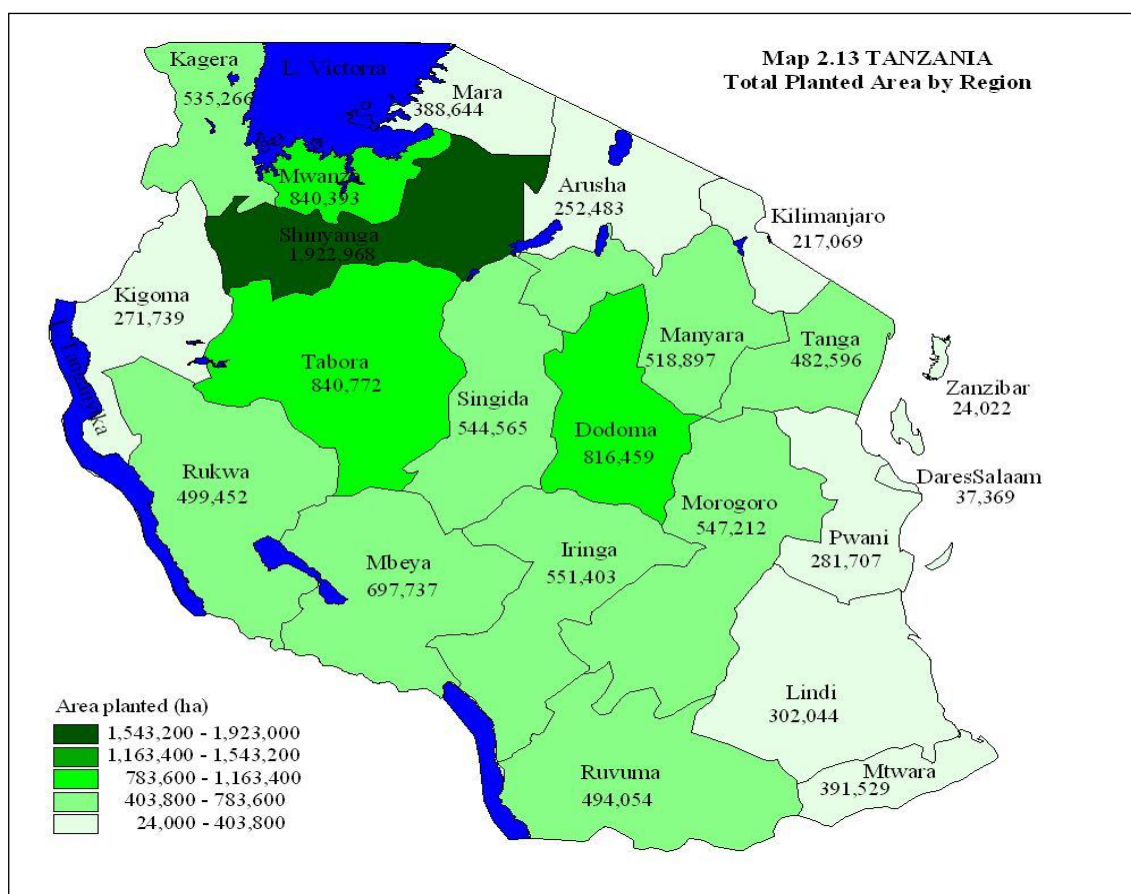

The Vuli rains which, as of 2002/03, were utilized mostly by 12 Mainland regions (Dar es Salaam, Pwani, Morogoro, Tanga, Kilimanjaro, Kagera, Mwanza, Mara, Kigoma, parts of Mbeya, Arusha and Shinyanga) for annual crop production, had apparently by 2007/08, extended beyond this traditional area, to all the regions except Singida.

In some regions such as Morogoro, the area planted with annual crops both during Vuli and Masika was comparable, while in others such as Kigoma, Kagera, Mwanza and Mara the area planted with annual crops was larger during the Vuli rains (57 – 78%) than during Masika rains (Chart 2.20 and Map 2.14),

Generally, planted areas were larger in the long rainy season than in the short rainy season with about half of the regions having planted at least one hectare per household (Chart 2.21). In the short rains areas, 2 ha or larger areas planted with annual crops were recorded only in two regions (Dodoma and Sinyanga) with an average of 2.4ha per household. While between 1 and 1.5 ha planted areas were reported in six regions (Morogoro, Tabora, Rukwa, Mwanza, Ruvuma and Mara ).

#### 2.4.1 Main Crops

Results on the main crops are reported first, by considering the relative importance of each of the crops under the grouping of annual crops and permanent or perennial crops (tree and non-tree types) followed by separate analyses of the annual and permanent crops in different sections.

#### 2.4.2 Relative Crop Importance

Nationwide, maize was the priority crop for the majority of households (5,107,264) across the rainy seasons followed by beans, paddy, groundnuts, sorghum and sweet potatoes, in that order, each engaging at least 500,000 households (Chart 2.22).

However, the trend on the basis of areas planted was slightly different

with maize still remaining the highest regardless of the rainy season Total planted area for maize was 4,086,555 ha, followed by paddy (906,708 ha), beans (749,766 ha), cotton (574,836 ha) and (sorghum 568,650 ha). All other crops had below half a million hectares planted, the smallest being

field peas with 15,220 ha (Chart 2.22). During the long rainy season, the number of households which planted maize was 3,491,793 which is more than twice that of the short rainy season season (1,615,471) households.

### 2.4.3 Crop Area Planted per Household

In terms of land allocation to different crops (Chart 2.23), cotton followed by chick peas, were the only two crops planted on land areas larger than a hectare per household (1.4 and 1.3 ha for cotton and chick peas, respectively). Even though the crops were planted by relatively low numbers of households (279,506 for cotton and 42,319 for chickpeas), the relatively large areas allocated to these crops illustrates their importance as cash crops.

Other crops which showed apparent increased popularity compared to 2002/03 (Chart 2.23) were sunflower (347,476 ha, planted by 498,328 households); cowpeas (89,949 ha, planted by 326,923 households) and sim sim (139,910 ha, planted by 232,380 households). Tomato was the only vegetable crop grouped among the main crops alongside other main crops such as maize, paddy, and cotton.

## 2.5 Crop Types

Cereals were the main type of crops grown across the country (Chart 2.24) occupying 5, 830,972 ha ( 67%) of the land under annual crops followed by pulses (chick pea, beans, cowpeas and green grams) on 1,002,819 ha ( 11%), oil seeds and oil nuts on 966,583 ha (11%), root and tubers 285,825ha (3%), cash crops (cotton, tobacco, pyrethrum, jute and seaweed) on 643,803ha (7%) and a very small proportion (1%) equivalent to 78,711 ha was planted with fruits and vegetables.

A major proportion of all the crops were planted during the long rainy season. The planted area for the short rainy season for cereal crops was about a fifth of the planted area during the long rainy season (Chart 2.25).

### 2.5.1 Cereal Crop Production

The total area planted with cereals was 5,830,972 ha of which 5797,269 ha (99.4%) in Tanzania Mainland and 33,704 ha in Zanzibar. From the total planted area in the Mainland maize occupied the largest portion of the planted area and accounted for 4,082,500 ha (70.4%) of the total cereal planted area. Likewise, maize production was the highest amongst the cereals at 5,436,776 tons equivalent to 71.6 percent of the total cereals production in the Mainland. Its productivity was about 1.3 tons/ha (Charts 2.26 and 2.27).

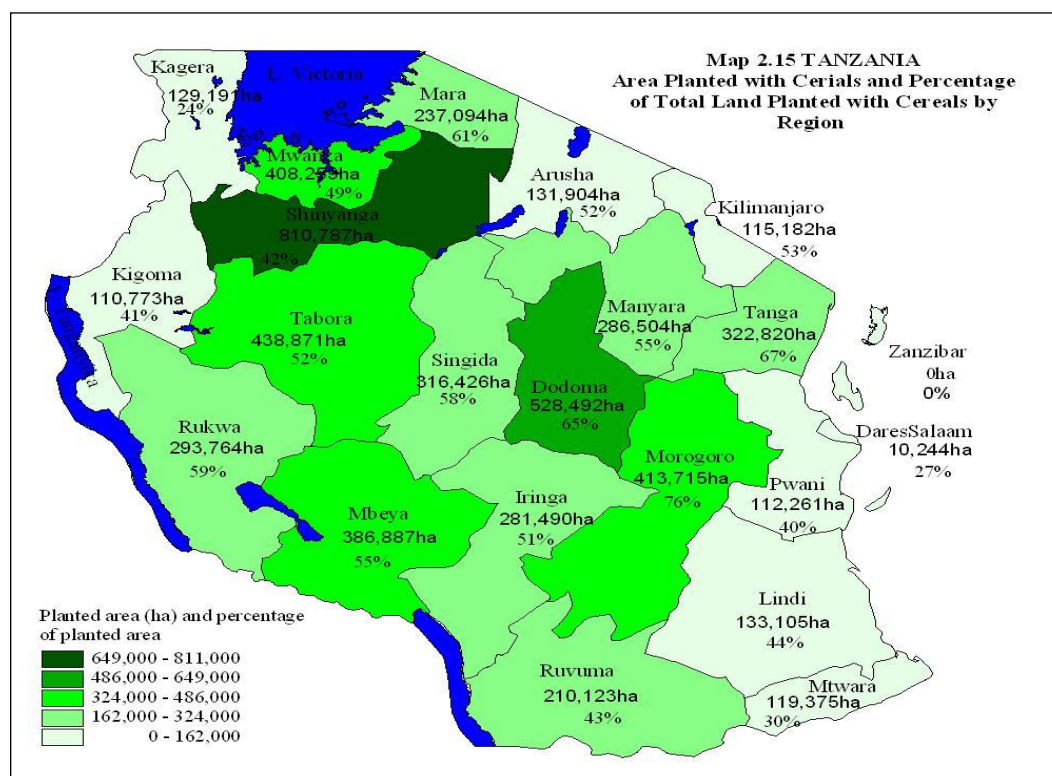

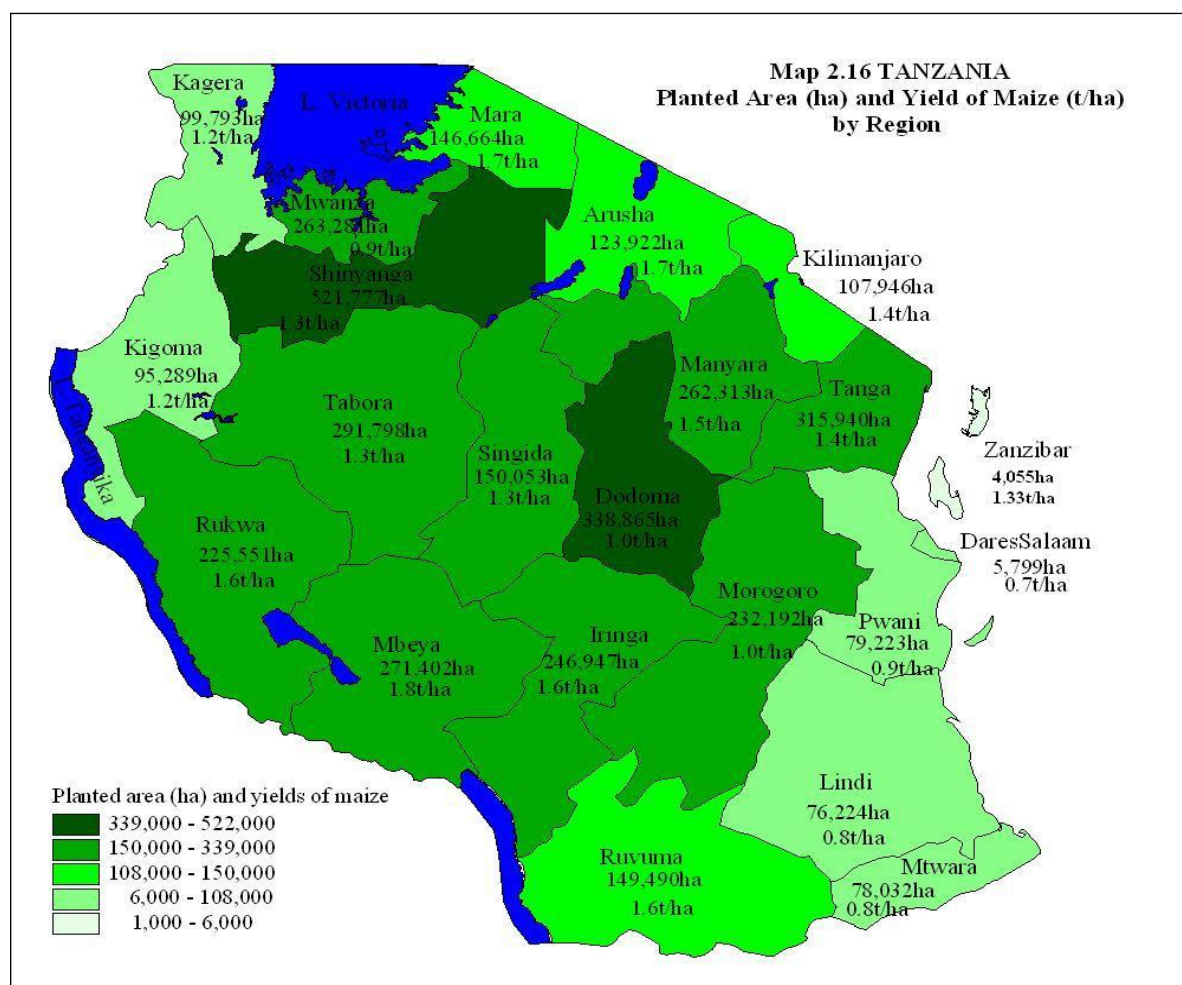

At national level, paddy was the second most popular cereal crop but the area planted to this crop was relatively limited (906,708 ha or 15.5%) while in Zanzibar, paddy was the most important cereal planted on 26,600ha (78.9%) of the land with cereals. Amongst the other cereals, sorghum was planted on a relatively large area (568,650 ha, 9.8%) compared to bulrush millet (156,797 ha, 2.7%), finger millet (68,847 ha, 1.2%), wheat (43,182 ha, 0.7%) and barley (233 ha, 0.004%). Compared to 2002/03, these proportions represent slight increases in the case of paddy, sorghum and bulrush millet and virtually no changes for the other cereals.

Generally the quantities harvested and the productivity for all cereals increased compared to 2002/03 period regardless of the production season. However, productivity for the most popular cereals was highest for paddy (1.6 tons/ha) equivalent to 43.8% increase compared to 2002/03, followed by 38.5% increase for maize and 40% increase for sorghum.

The trend for areas planted with cereals in 2007/08 remained similar to that of 2002/03 in which all the regions had land planted with cereals with 10 regions each having at least 5 percent or more under cereals. Shinyanga had the highest percentage (13.9%) or 810,787 ha. Dar es Salaam region maintained its position as the region having the lowest (10,244 ha) equivalent to 0.2 percent, followed by Zanzibar with 0.6 percent (120,325 ha) of the land under cereals (Chart 2.27 and Map 2.15.).

### 2.5.1.1 Maize

Across the country, maize was the most widely planted cereal in both the Mainland and Zanzibar. Of the entire 5,830,972 ha of land planted with cereals, maize occupied 4,086,555 ha or 70% of the land (Chart 2.28). Amongst regions, Shinyanga had the highest percentage of land under maize (521,777 ha) equivalent to only 27 percent of the land area in the region. Comparatively, very small proportions were devoted to maize production in Dar es Salaam region and Zanzibar of which account for 5,799 ha

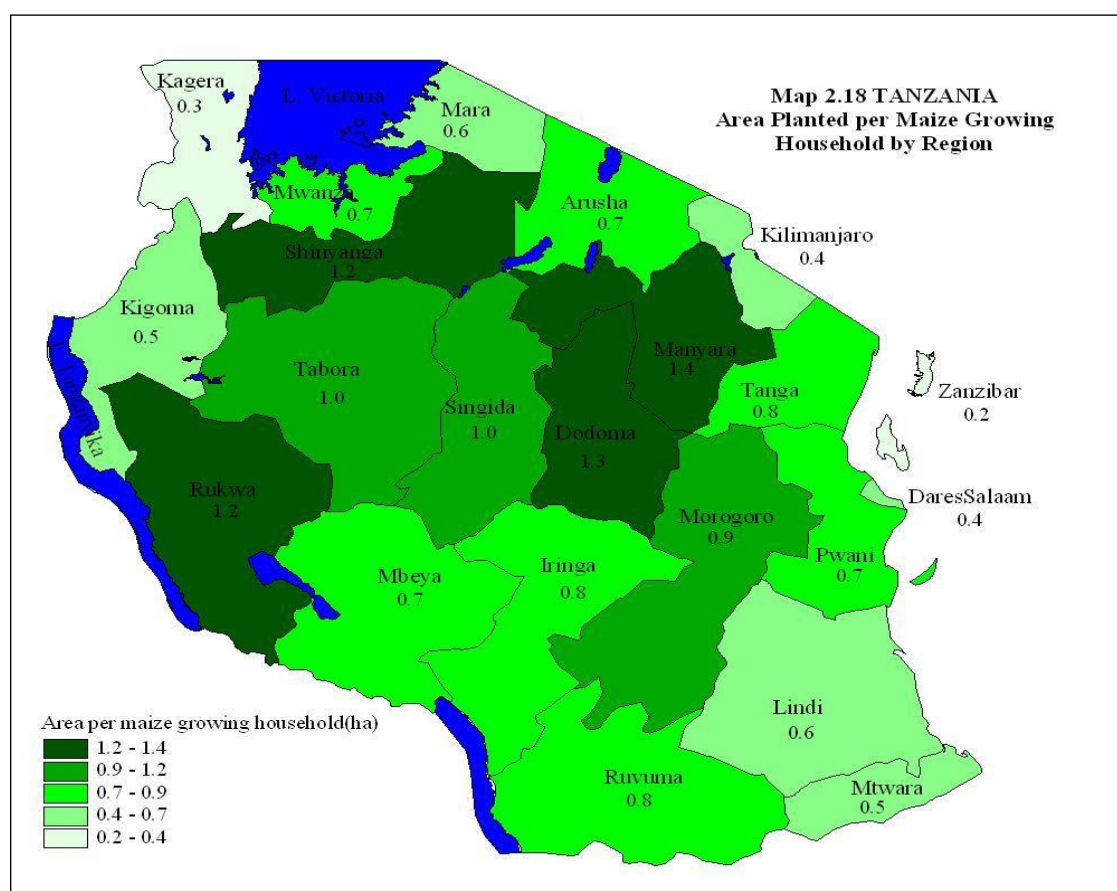

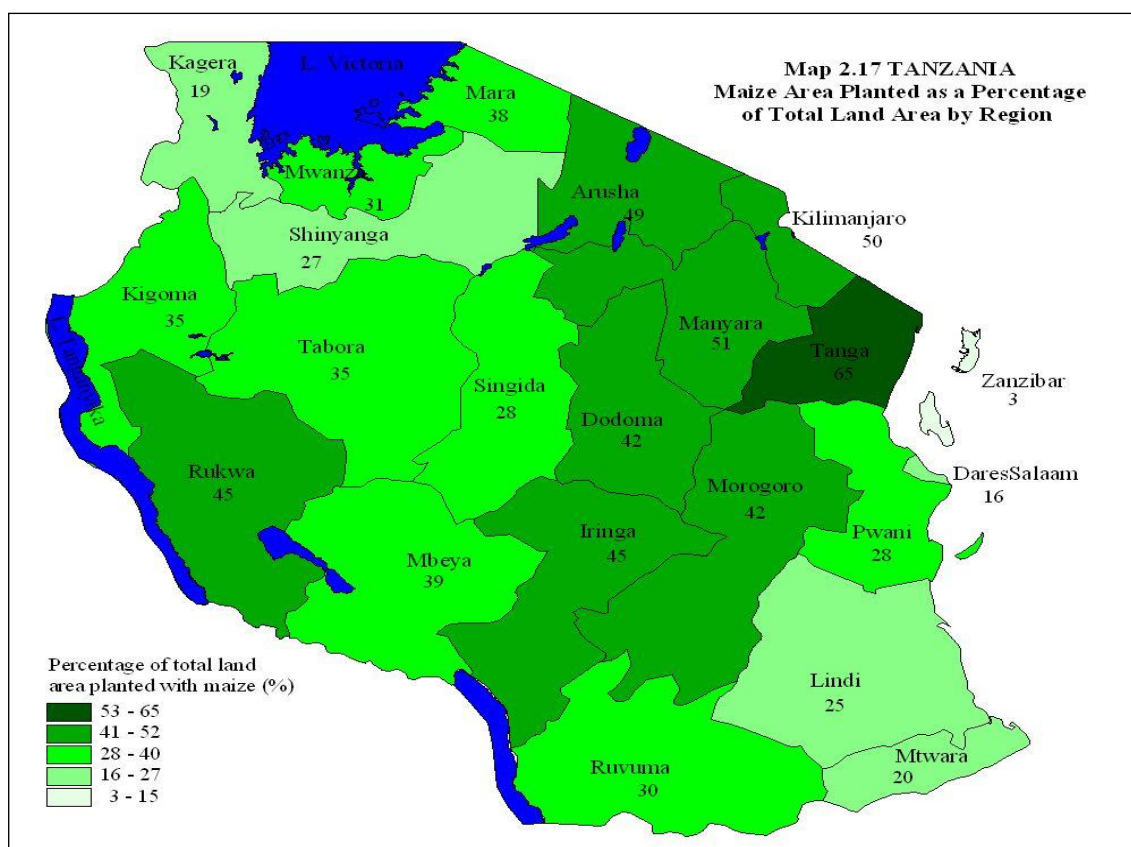

(0.14%) and 4,055 ha (0.1%) respectively. However, in Zanzibar, this presents 3.4 percent of the total land. (Chart 2.28 and Maps 2.16 and 17).

Generally, Shinyanga together with Dodoma, Tanga, Tabora, Mbeya, Mwanza, Manyara, Iringa, Morogoro and Rukwa, in that order, were the main maize producing regions in the country. (Chart 2.28). Despite the large area under maize in Shinyanga region, the area planted with maize per household was highest in Manyara (1.36 ha) followed by Dodoma (1.3 ha). Other regions that had between 1.0 and 1.3 ha per household (Chart 2.28 and Map 2.18) were Shinyanga (1.18 ha), Rukwa (1.15 ha), Singida (1.04 ha) and Tabora (1.03 ha).

The number of households which planted maize in the long rainy season was 3,491,793 households or 60.4 percent of the total crop growing households in Tanzania (3,479,383 on the Mainland and 12,410 in Zanzibar) and in the short rainy season the number was 1,615,471 present 28 percent of the total crop growing household (1,608,934 households on the Mainland and 6,537 households in Zanzibar).

However, the total production of maize was 5,444,178 tons (5,438,776 tons in the Mainland and 5,402 tons in Zanzibar). Production has increased dramatically by over 2,827,063 tones since the 2002/03 agricultural year. The average yield of maize was, in most regions, above one ton with Mbeya (1.82 tons/ha) followed by Mara (1.75 tons/ha) being the most productive regions. In Mwanza, Pwani, Mtwara, Lindi and Dar es salaam regions, average yields were less than a ton/ha.

### 2.5.1.2 Paddy

Like maize, paddy was also grown in all regions of Tanzania but in varying proportions. Compared to 2002/03, the number of households growing paddy increased by about 20 percent bringing the national total number of households engaged in paddy production (Mainland and Zanzibar) to 1,162,050.

Shinyanga region had the highest percent of land planted with paddy in the country (19.3%) and the highest actual regional land planted with paddy (175,192 ha).

Other regions with similarly large proportions of land

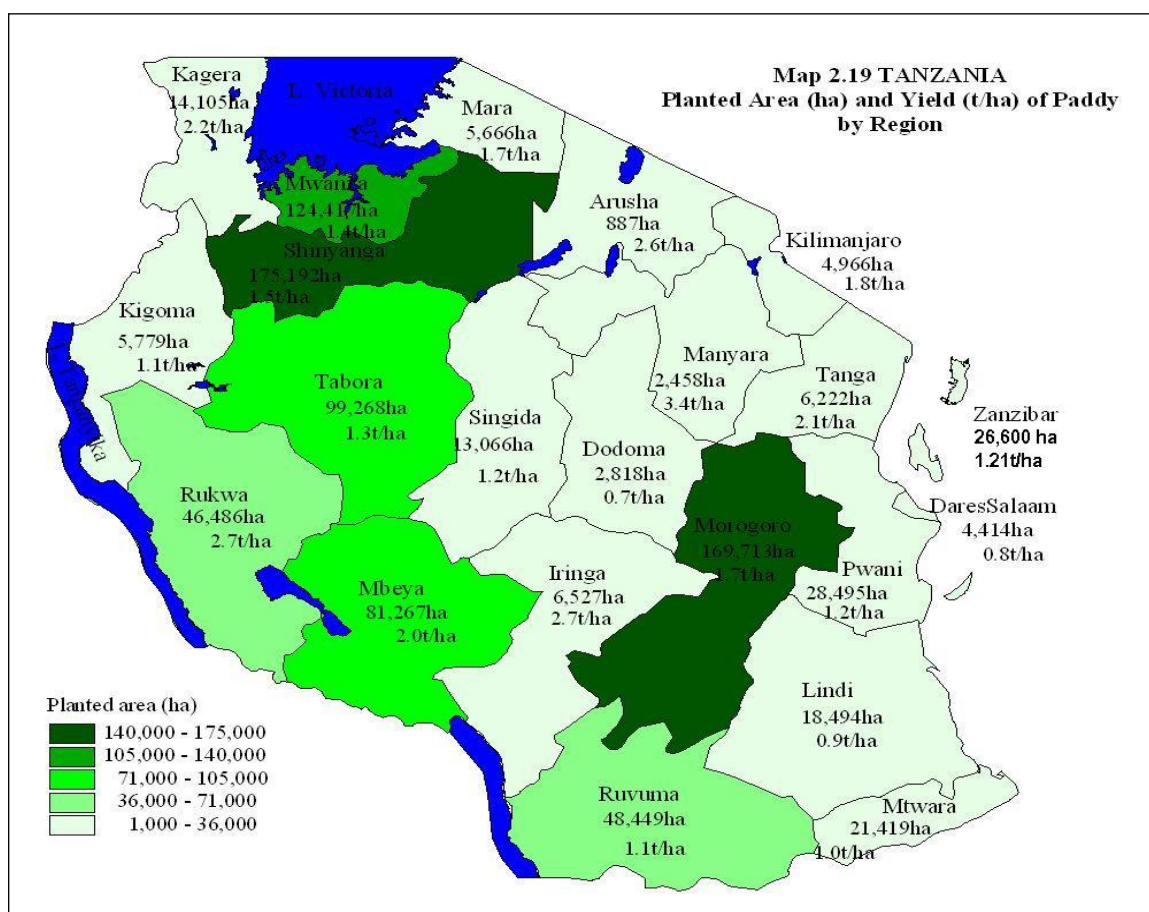

planted with paddy as a proportion of national land (Chart 2.29 and Maps 2.19 and 20) were Morogoro (18.7%), Mwanza (13.7%) and Tabora (11%). However, on a regional basis, Morogoro had the largest percent of land (31%) planted with paddy followed by Zanzibar (22.2%) Mwanza (14.8%) and Dar es Salaam (11.8%). All other regions had less than 10% of the land planted with paddy.

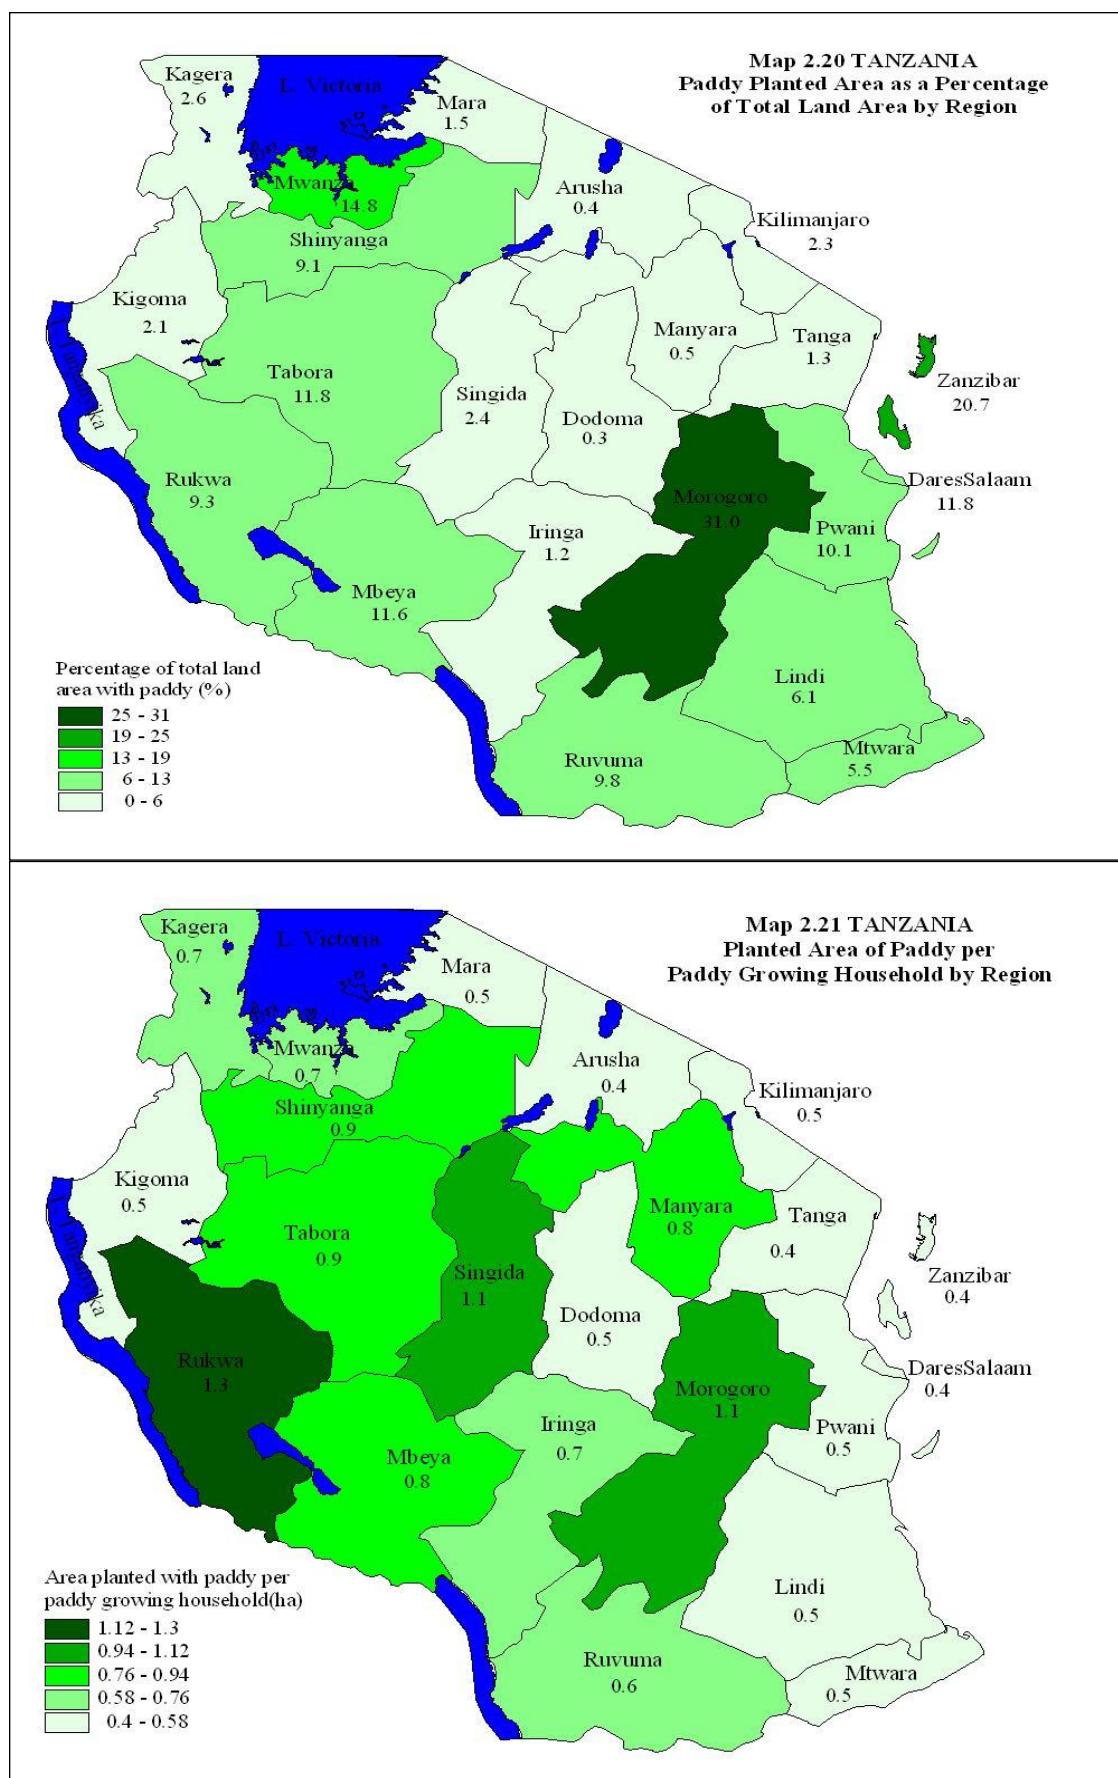

Arusha region had the lowest number of households (2,308) and the smallest actual regional land planted with paddy (887 ha or 0.1%). Paddy production was most popular in Rukwa region

where the paddy planted area per household was highest (1.34 ha) and Zanzibar had the lowest (0.37 ha). This implies that paddy production was important in Zanzibar but farm sizes were limited by availability of land (Chart 2.30, Maps 2.21).

Compared to the 2002/03 Agriculture Census data where yields were reported to be an average of one ton/ha, paddy yields have increased dramatically and in some cases by more than 100%. The yield range was wide (2.16) with the lowest recorded in Dodoma (0.7 tons/ha) and the highest yield was recorded in Manyara region (3.4 tons/ha). Rukwa region which had the highest area planted with paddy per household (1.34 ha) also had the second highest average yield of 2.74 tons/ha.

### 2.5.1.3 Sorghum

At national level, a total of 669,102 households planted sorghum in the long rainy season and 146,429 in the short rainy season. This represented 11.6 percent and 2.5 percent of the total crop growing households in the country

The total area planted with sorghum was 568,650ha (566,728ha in Tanzania Mainland and 1,922ha in Zanzibar). The highest proportion of land planted with sorghum (Chart 2.31 and Maps 2.22 and 2.23) was in the three regions of

Shinyanga (98,145 ha or 17.3%), Singida (97,513 ha or 17.2%) and Dodoma (96,147 ha or 16.9%) with the second notch occupied by Mara (13%), Tabora (8.1%) and Lindi (6.7). However, Shinyanga region had the largest total National area planted with sorghum 1,922,968 ha and this presents 12 percent of the total regional land in the country.

The total production amounted to 552,353 tons of which almost one fifth (111,959 tons) was produced in Singida region. However, sorghum was most productive in Tanga region (1.5 tons/ha) where both the actual regional land area planted with sorghum (593 ha)

and the number of households producing sorghum (596) were third and second lowest after Dar es Salaam and Kilimanjaro regions (Chart 2.32).

Sorghum planted areas of at least one ha per household were recorded in Tabora and shinyanga, (Chart 2.32 and Map 2.24). The land area planted per household was largest in Tabora (1.3 ha) and lowest in Dar es Salaam (0.09 ha). Generally, however, the land areas planted with sorghum per household were comparable to the areas allocated to the production of maize and paddy.

#### 2.5.1.4 Other Cereals

Other cereals that were produced, even though in small quantities and by relatively fewer households, include bulrush millet, finger millet, wheat and barley (Table 2.2).

**Table 2.2 Production of Other Cereals**

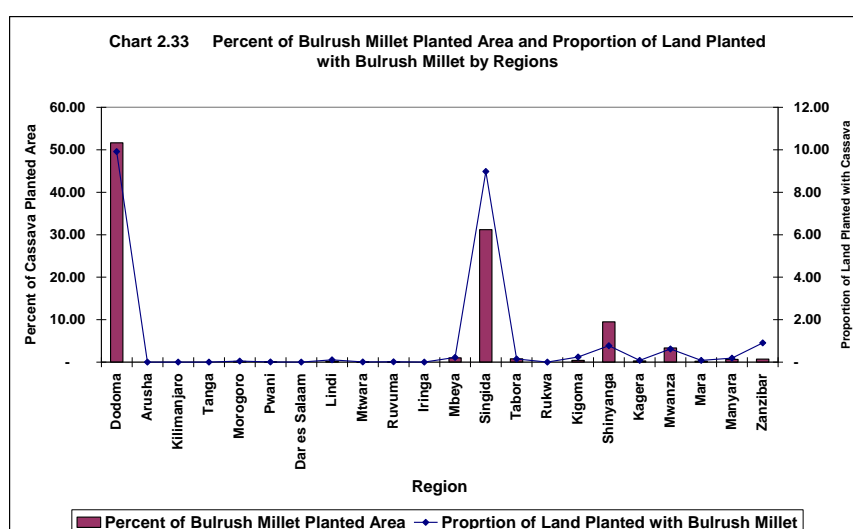

##### 1. Burlush Millet

Region	Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)
Dodoma	106,449	80,956	47,738	0.59
Singida	58,960	48,891	36,903	0.75
Shinyanga	9,156	14,595	14,798	1.01
Mbeya	2,679	1,544	837	0.54
Other Regions	6,481	5,287	3,496	0.66
<b>Total</b>	<b>183,725</b>	<b>151,273</b>	<b>103,772</b>	<b>0.69</b>
<b>2. Finger Millet</b>				
Dodoma	13,448	9,705	6,232	0.64
Ruvuma	21,225	7,278	5,542	0.76
Iringa	17,363	6,072	3,466	0.57
Mbeya	18,795	7,265	3,846	0.53
Singida	9,070	6,830	6,227	0.91
Rukwa	13,212	10,637	10,390.48	0.98
Mara	15,154	5,722	5,996.94	1.05
Other Regions	22,997	6,665	4,345	0.65
<b>Total</b>	<b>131,263</b>	<b>60,174</b>	<b>46,045</b>	<b>0.77</b>
<b>3. Wheat</b>				
Arusha	4,162	4,002	5,386.34	1.35
Ruvuma	7,546	2,737	1,673.36	0.61
Iringa	40,590	17,530	12,646.26	0.72
Mbeya	12,149	5,419	4,153	0.77
Rukwa	2,378	1,939	3,767	1.94

Other Regions	448	115	90.35	0.79
<b>Total</b>	<b>70,847</b>	<b>41,935</b>	<b>42,840</b>	<b>1.02</b>
<b>4. Barley</b>				
Arusha	356	180	245.79	1.4
<b>Total</b>	<b>548</b>	<b>233</b>	<b>289</b>	<b>1.24</b>

Bulrush millet is mainly grown in the long rainy season and in very few regions during the short rainy season. During the short rains, Mwanza was the only region with a very high proportion of growing households (2,903 households, 79 percent of the households in the Mainland) and produced 2,135 tons. The remaining 21 % of the growing households in the Mainland were found in Morogoro, Shinyanga, Kagera and Mara regions which all together produced 972 tons during the short rain season.

During the long rainy season, bulrush millet was grown mainly in four regions (Chart 2.33); Dodoma, Singida, Shinyanga and Mwanza, in decreasing order of importance. Dodoma region was leading with 106,449 households equivalent to 57.6% of all producing households in Tanzania; had the largest actual planted area (80,956 ha) and the largest quantity harvested (47,738 tons), followed by Singida.

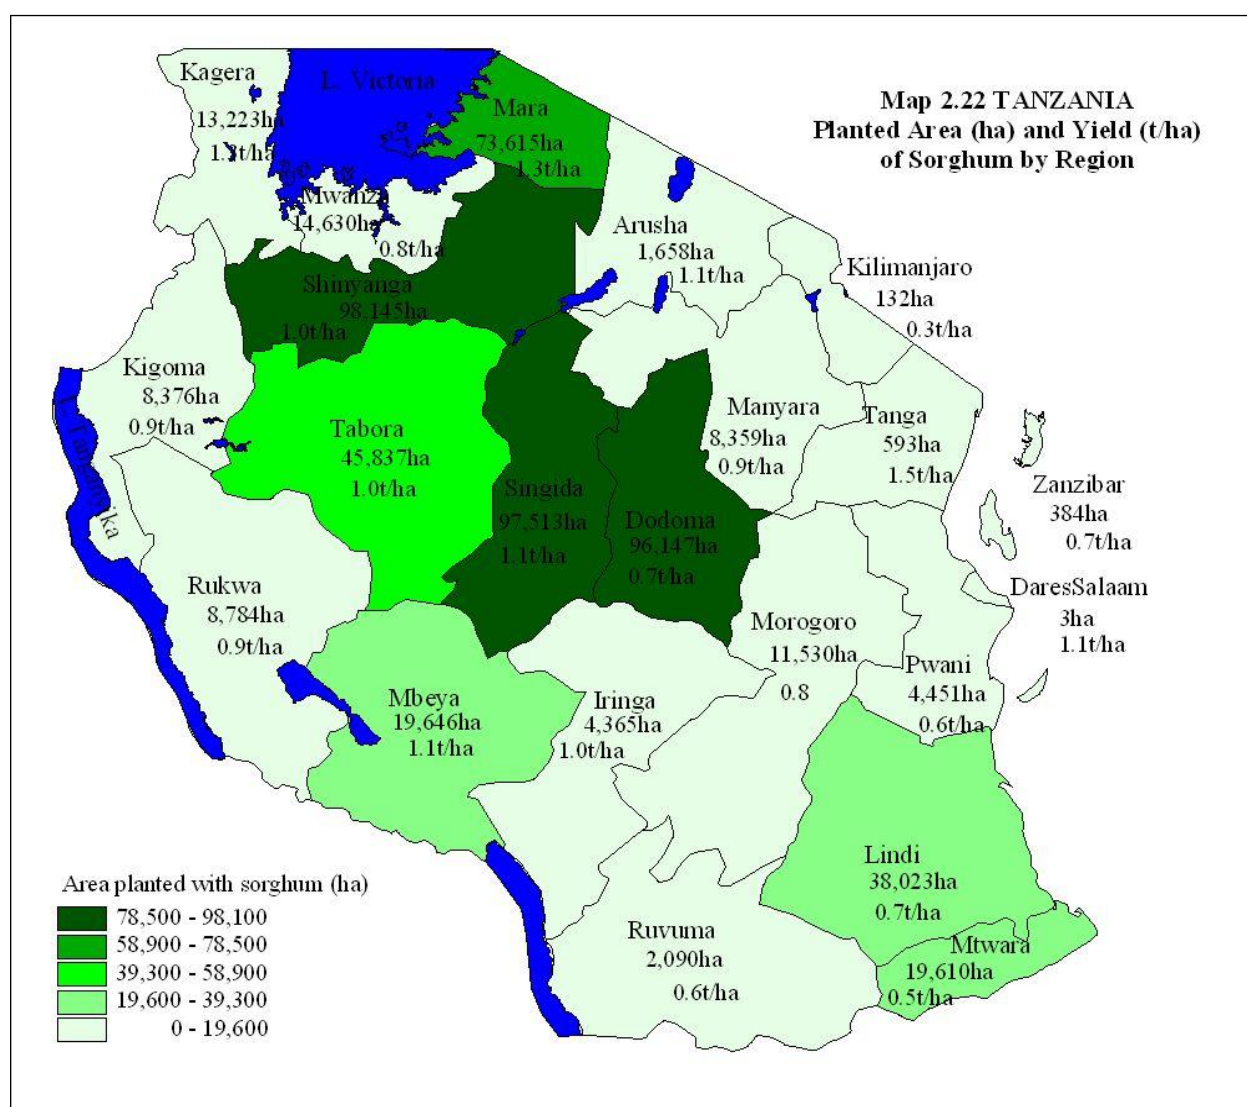

Shinyanga region was third overall with respect to number of households, actual area planted and

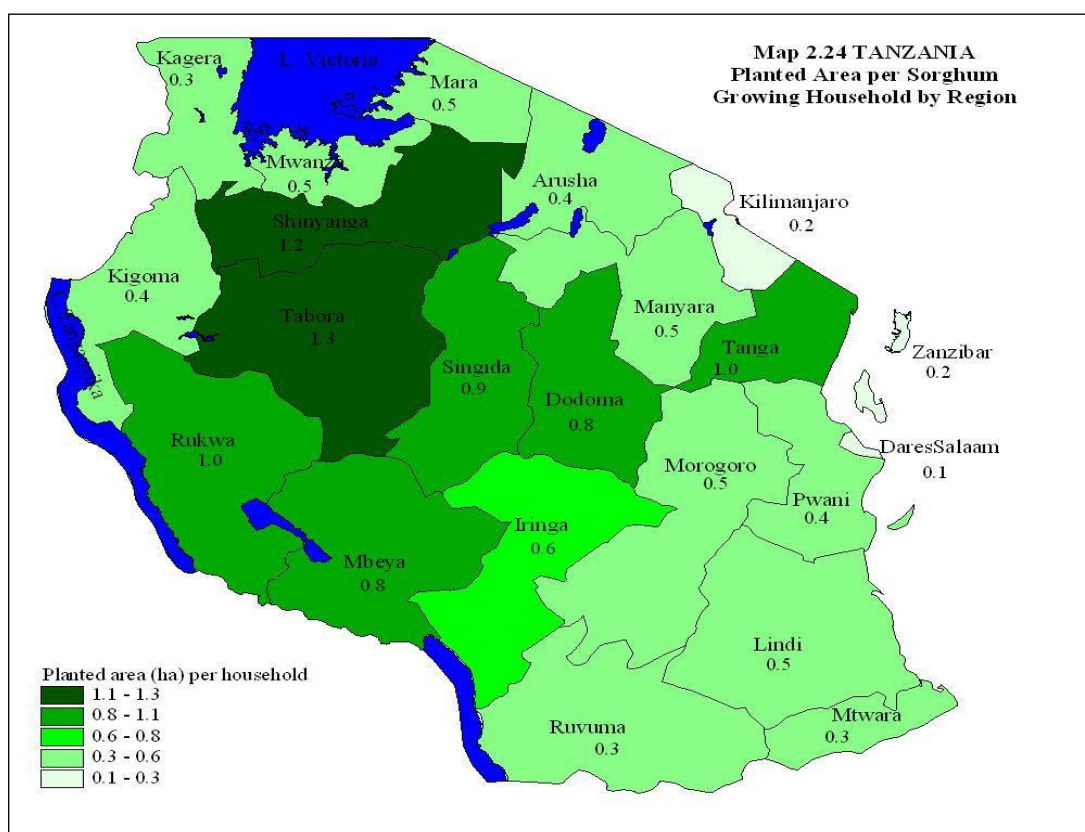

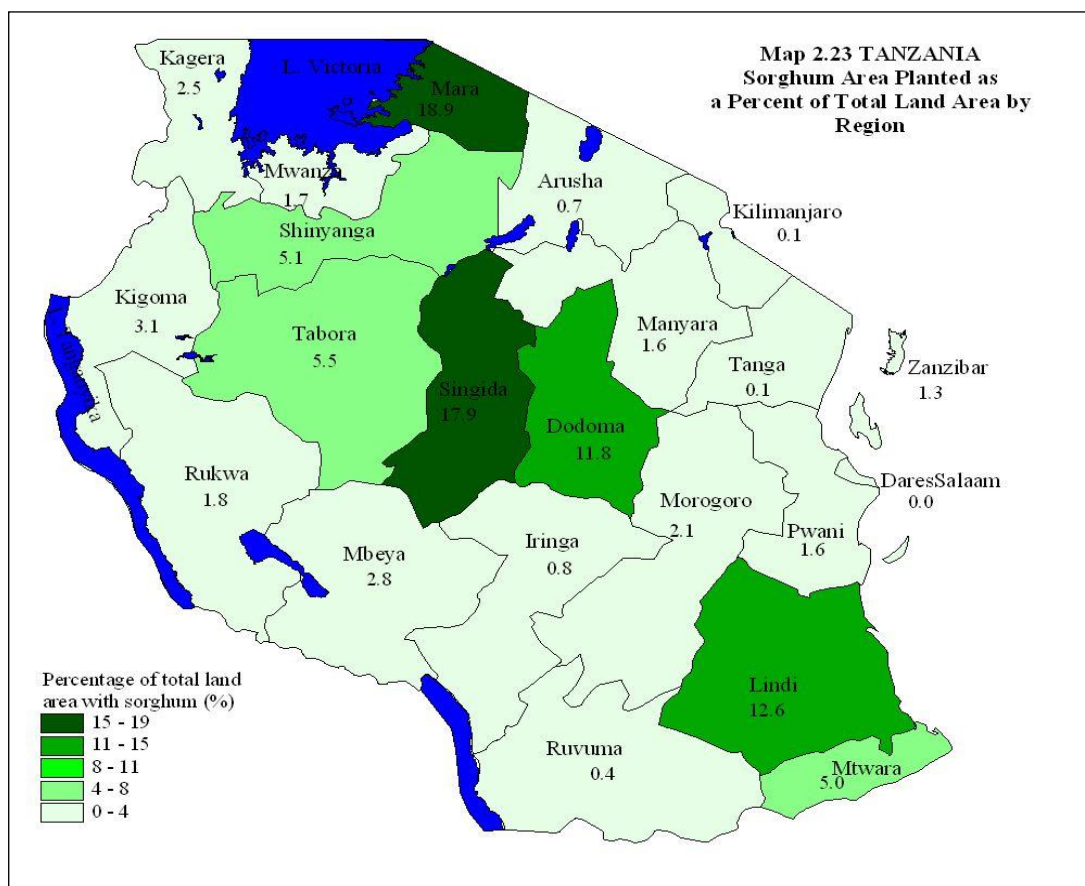

quantity harvested. However, bulrush millet productivity in this region was the highest at 1.6 tons/ha during the short rain season and 1.0 tons/ha during the long rain season.

Finger millet was planted in all regions except Tanga, Morogoro, Pwani and Kigoma during long rain season. Six regions have more than a thousand households that planted the crop with Mara region having 13,005 households (52% of all households in the country) during short rain season. Finger millet was most popular in Mara region where 28,158, (22.9%) of the total households in the region (127,938 households planted finger millet during short rainy season and 15,154 during long rainy season). However, the largest planted area was in Rukwa region (10,637 ha) during long rain season which also produced the largest quantity harvested (10,390 tons) and differed from Mara Region where the crop is grown in both seasons. (Table 2.2). The crop was not grown in Zanzibar,

About 70,847 households were involved in wheat production with a cultivated area of 41,935 ha in long rainy season. Wheat was mainly recorded in Arusha, Ruvuma, Iringa, Mbeya, Rukwa and Manyara regions during 2007/08 Agriculture Sample Census (Table 2.2). Iringa region had the largest number of households involved (40,590, 57 %) and the largest actual planted area (17,530 ha, 41.8%) during long rain season. The largest land area for wheat production per household was in Manyara (2.8 ha per household) but the crop was most productive in Rukwa region (1.94 tons/ha) followed by Manyara (1.48 tons/ha) and Arusha (1.35 tons/ha) in long rain season. The productivity in all other regions, including Iringa, was less than one ton/ha.

### 2.5.2 Root and Tuber Crop Production

Root and tuber crops were produced both during the short and long rain season but predominantly in the latter for both the Mainland and Zanzibar (Table 2.3). A total of 1,872,612 households were reported to engage in root crop production considering in the two rain seasons. The total production of roots and tubers was 1,186,616 tons of which 1,164,458 tons were produced in the Mainland (a decline of 51.6% compared to the 2,405,132 tons produced in 2002/03) and 22,158 tons were produced in Zanzibar (a decline of 72% compared the 79,060 tons produced in 2002/03).

Cassava is the major crop in the root and tuber group of crops in Tanzania. (Chart 2.34). It engaged 1,303,749 households with an area of 669,134 hectare. Sweet potatoes were grown by 275,003 households during short rainy season and 467,089 households during long rain season in the Mainland. The crop is also important in Zanzibar, where 12,241 households and 16,924 households were engaged during short and long rain seasons, respectively.

The actual area planted was 3,100 ha during short rain and 4,824 ha during long rain with production of 6,269 tons and 10,600 tons respectively.

On the other hand, both Irish potatoes which were planted on a total of 38,814 ha (13.6%) by 110,965 households (10.6%) and coco yams which were planted on 10,940 ha (3.8%) indicate increased engagement by households and allocation of land for the two crops (Chart 2.34) compared to 2002/03.

With the exception of coco yams planted in the short rains, the productivity of all other roots and tuber crops in the Mainland was at least one ton/ha, the highest being for Irish potatoes planted

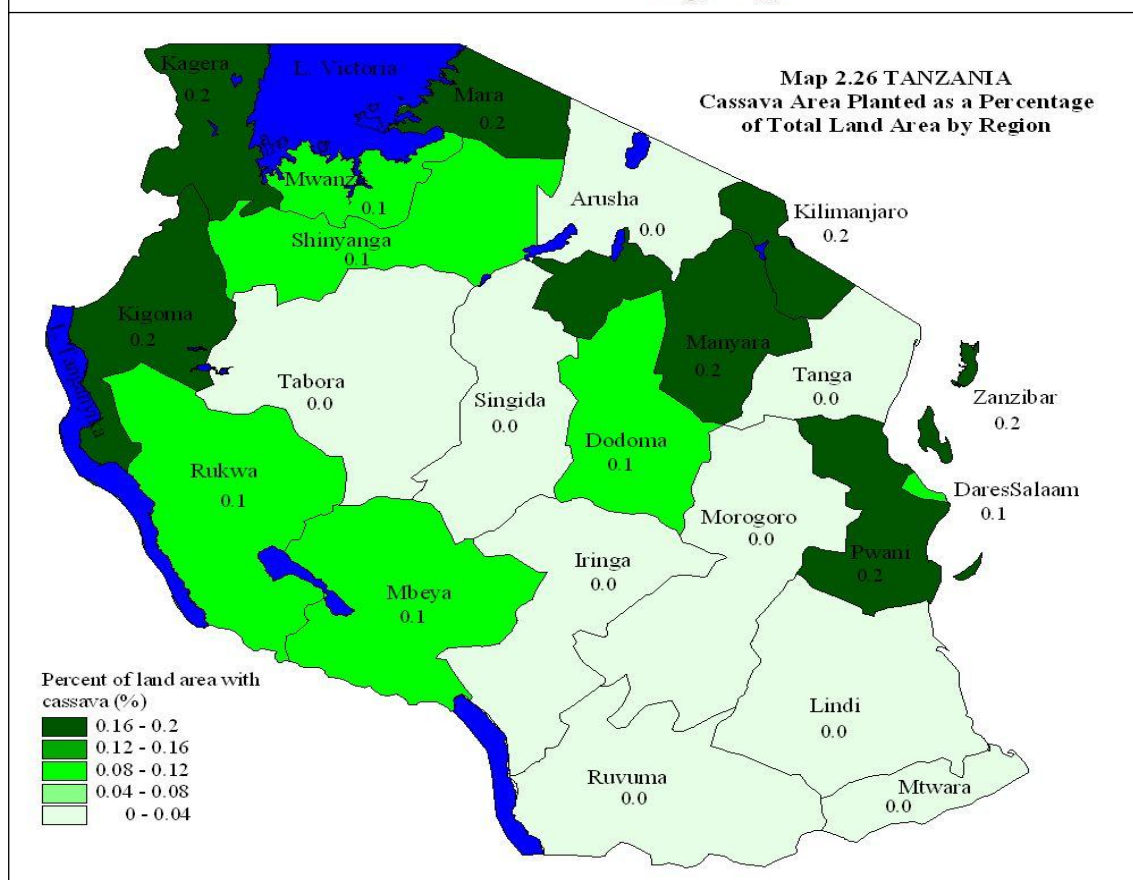

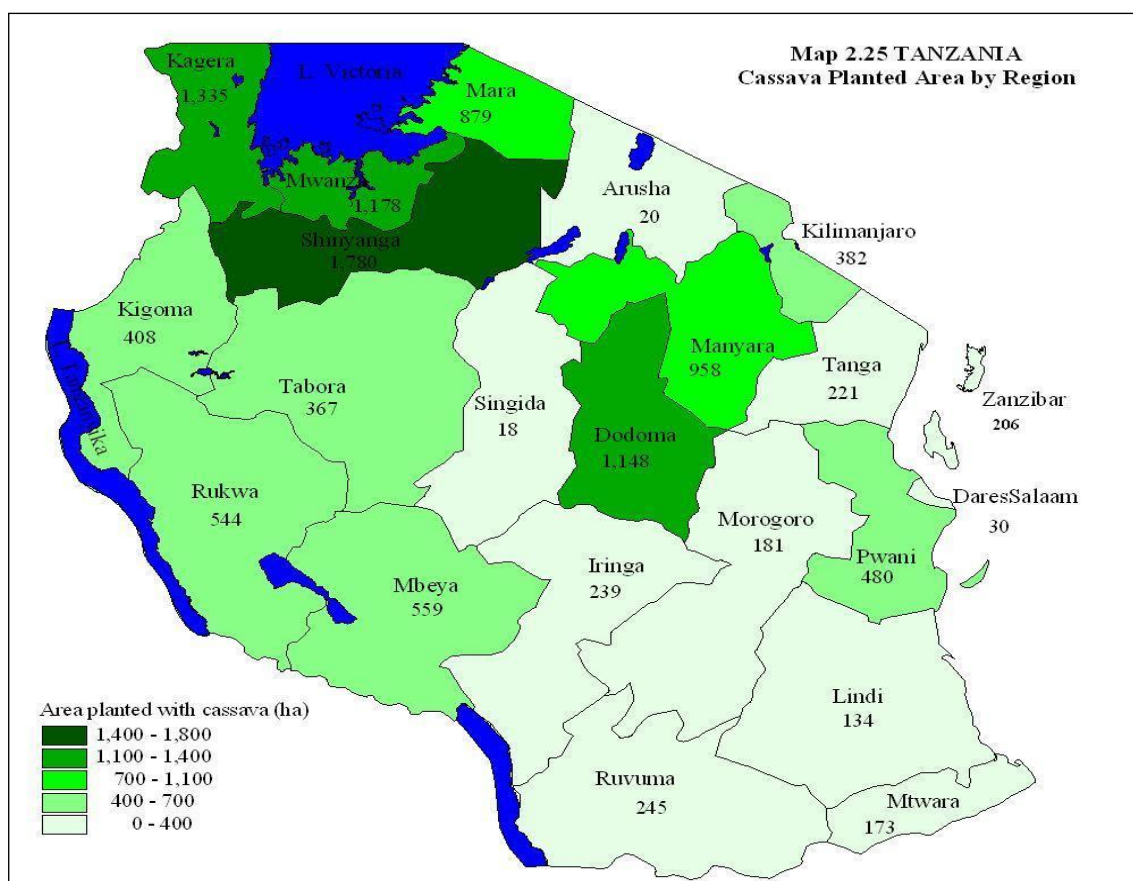

during the long rains (3.9 tons/ha). Productivity was generally higher in Zanzibar for most of the root and tuber crops except Irish potatoes in the two seasons and yams in the long rainy season.

### 2.2.1 Sweet Potato

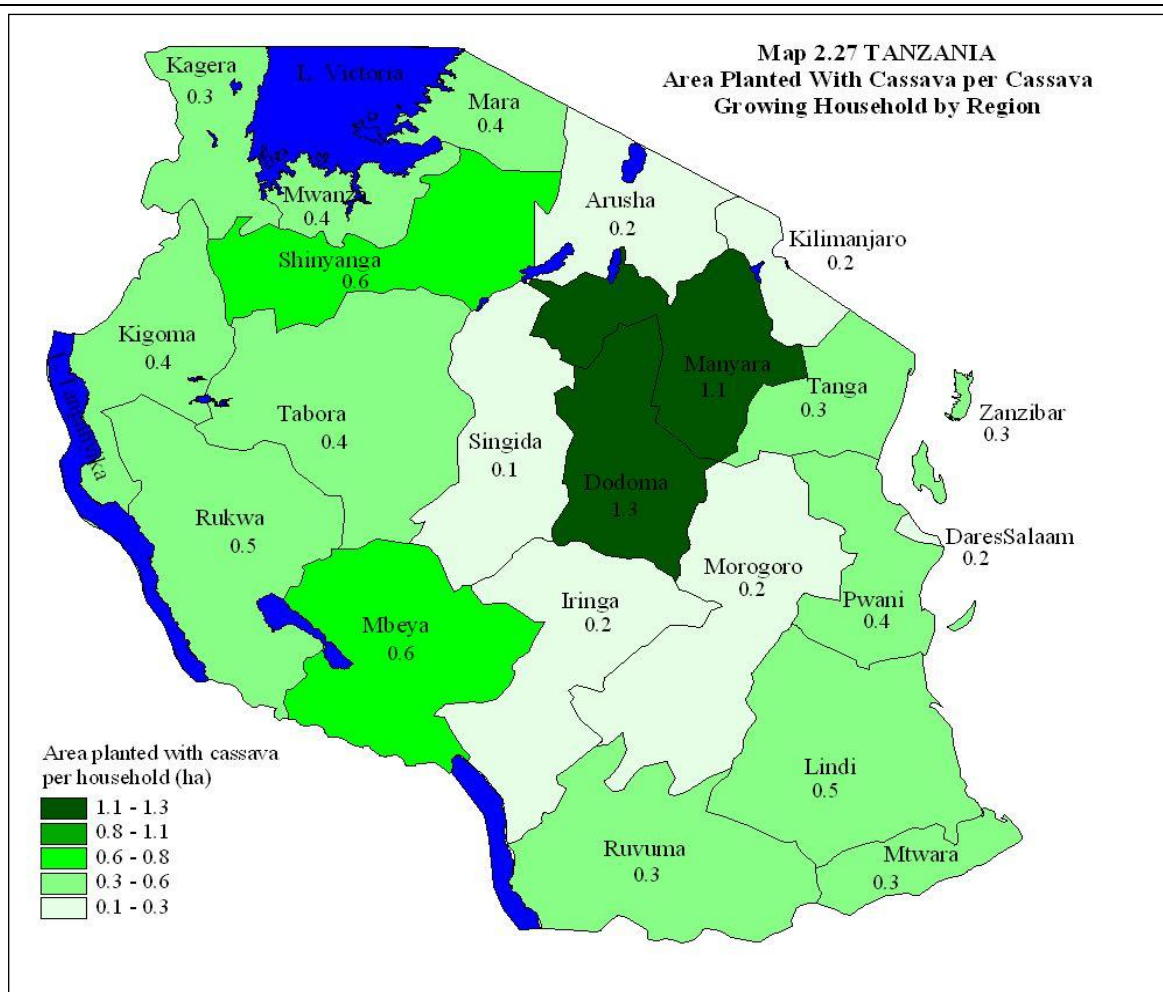

Total area planted with sweet potatoes was 218,251 ha. On a regional basis (Chart 2.35 and Map 2.21) about 55% of the national land planted with sweet potatoes was in two regions: Shinyanga (69,155 31.7% of total national planted area) and Mwanza (23.3% or 50,736 ha). The two regions were followed by Kagera (17,070 ha, 7.8%) Mara (18,127 ha, 8.3%) and Tabora (18,613 ha, 8.5%). Despite sweet potatoes being the predominant crop in the category of roots and tubers in Zanzibar, the 7,924 ha represented only 3.6% of the total planted area (Chart 2.35 and Map 2.22).

However, in Dar es Salaam region, despite the limited land planted to sweet potatoes (3,392 ha, 1.6%), the land area planted with sweet potatoes per household (0.42 ha) was the highest in the country (Chart 2.36 and Map 2.23)

### 2.5.3 Pulses

In the Mainland, pulses comprising mainly beans together with cowpeas, green grams, chick peas, bambaranuts, field peas and mung beans (Chart 2.37) were produced. However, chick peas, field peas and mung beans were not planted at all in Zanzibar and bambaranuts were planted only during the long rain season.

Most of the pulses were produced during the long rains, and to a limited extent, during the short rain season. The total area under pulses was estimated at 1,002,818 ha of which about 70.4% (706,389 ha) was planted during the long rain season. The distribution of households producing pulses followed a similar pattern with 1,753,218 households or 64% of the total 2,735,469 households producing pulses during the long rain

season. The yield levels did not vary significantly between the short and long rain season but in almost all cases productivity of the different pulses was below a ton per ha.

### 2.5.3.1 Beans

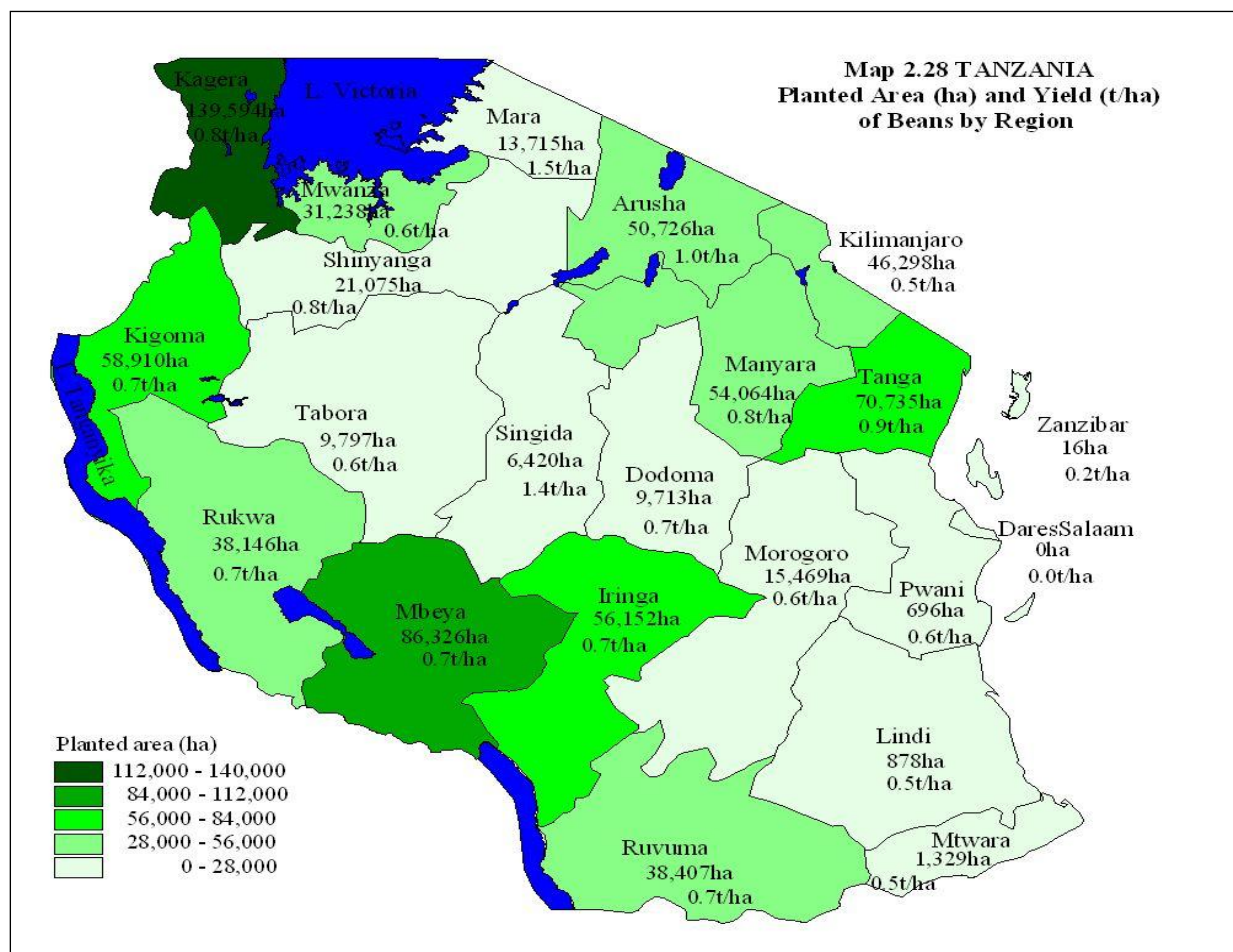

Among the pulses, dry beans were most dominant on the basis of planted area in the Mainland for both, the short and long rainy seasons followed by cowpeas and chick peas. In Zanzibar, on the other hand, cowpeas were the most commonly planted pulse in both seasons followed by green grams.

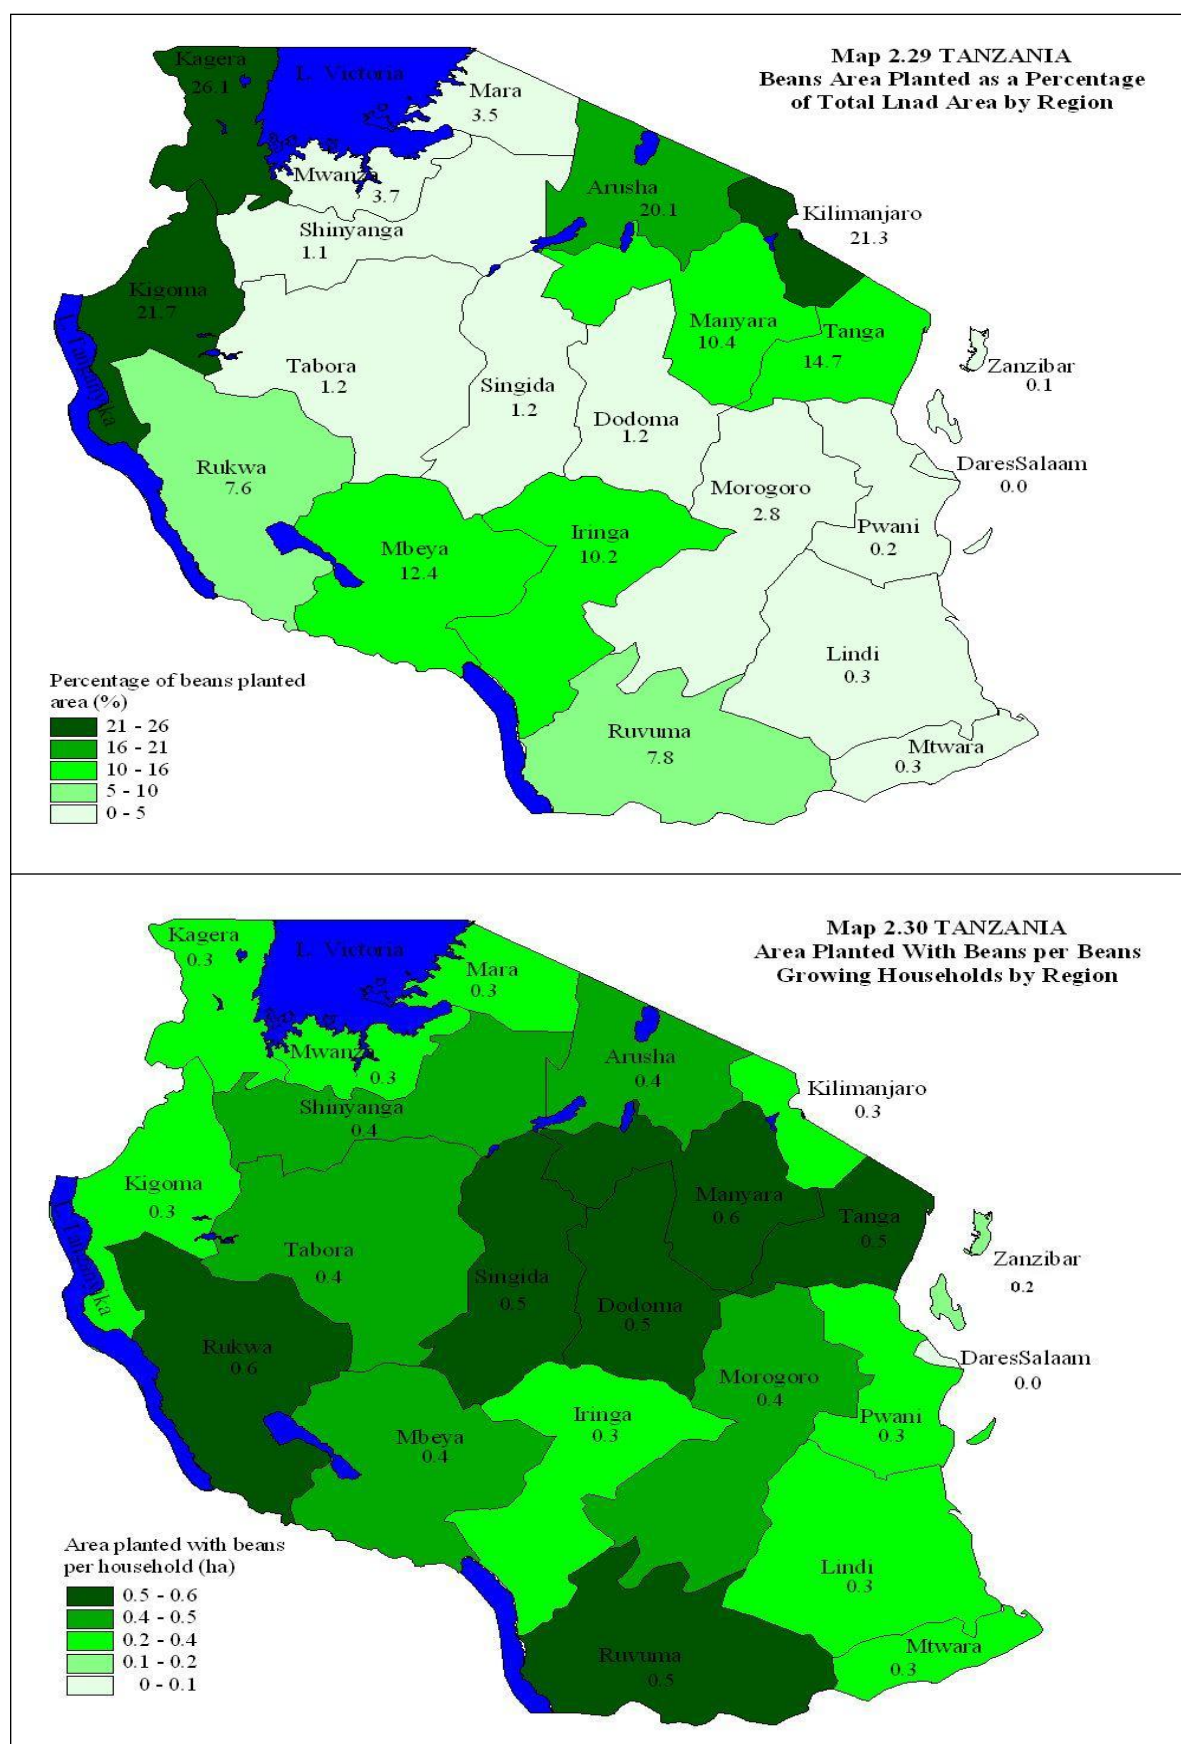

The top 10 producing regions remained the same as was the case in 2002/03 (Agriculture Census 2002/03 data). Within the top ten producing regions, in a descending order, were Kagera, which maintained first position by having the largest actual planted area (139,594 ha) which accounted for 18.6% of the actual planted area and about 26% of the total planted area in the country

followed by Mbeya (86,326 ha, 11.5% of planted area), Tanga (70,735 ha, 9.4%) and Kigoma (58,910 ha, 7.9%). Others were Iringa (56,152 ha, 7.5%), Manyara (54,064 ha, 7.2%), Arusha (50,726 ha, 6.8%), Kilimanjaro (46,298 ha, 6.2%), together with Ruvuma and Rukwa regions, each of which accounted for 5.1% of the planted area (Chart 2.38 and Map 2.28).

However, the area planted with beans as a percent of total planted area was generally below 30% and in all the regions (Map 2.29), yield levels were generally low, being highest at 1.5 tons/ha in Mara, where beans were not a major crop, and lowest at 0.32 tons (averaged over the two seasons) in Zanzibar (Map 2.28). Generally, farmers planted beans on relatively small plots being highest in Rukwa at 0.6 ha/household and lowest at 0.2 ha/household in Zanzibar (Chart 2.28, 2.29 and Map 2.30).

### 2.5.3 Oil seed Crops

The oil seed crops produced in Tanzania include sunflower, simsim (also known as sesame), groundnuts, soya beans and castor fung. The total area planted with oil seed crops has almost doubled from 534,710 ha 2002/03 to 966,583 ha 2007/08 Agriculture Sample Census.

Of the total area under oil seed crops, groundnuts occupied 471,296 ha (48.8%), sunflower 347,478 (35.9%), simsim 139,910 (14.5%), soya beans 7,522 (0.8%) and castor fung 377 (less than 0.1%) (Chart 2.39). In Zanzibar out of five oil seed crops grown in Tanzania, only groundnuts is grown and at a relatively small area 699 ha (0.2%)

The importance of sunflower and simsim has increased considerably

since the 2002/03 Agriculture Sample Census. The area under sunflower 347,478 ha, (35.9% of total area under oil seeds) has increased three fold compared to the 2002/03 census (115,583 ha) and that of simsim 139,910 ha (14.5%) is twice as much as of the 2002/03 census. Soya bean and castor fung maintained the land area proportions that are similar to the 2002/03 situation (0.8%) for soya bean and (0.04%) for castor fung. However, the increased actual areas under soya bean (7,522 ha) compared to 1,819 ha for 2002/03, indicate that interest in this crop has increased over the years (Table 2.3).

The total oil seed crop production was 644,838 tons (644,153 tons on the Mainland and 685 tons in Zanzibar). The production of groundnut is higher than other oil seed crop with a total production of 341,459 tons (340,773 tons on the Mainland and 685 tons in Zanzibar) representing 53.0 percent of the total oil seed crop production, followed by sunflower 238,663 tons, (37%). Other oil seed crops are produced in minor quantities with simsim (59,103 tons, 9.2%), Soya beans (5,390 tons, 0.8%) and castor fung (224tons, 0.03%). Consistent with the increased land area planted, soya beans production increased to 5,390 tons compared to 634 tons in 2002/03.

Yield levels for all oil seed crops except castor bean has increased since 2002/03. Soya beans was the most productive oil seed crop planted during the short rainy season (1.3 tons/ha). In the long

rain season, groundnut was the most productive (0.73 tons/ha), followed by sunflower (0.69 tons/ha) , soya beans (0.68 tons/ha) and castor fung (0.58 tons/ha). Simsim was the least productive at 0.43 tons/ha (Table 2.3).

The short rainy season is much less important than the long rainy season for oil seeds production. The total area planted with oil seed crops in the short rainy season was 60,676 hectares which represents 6.3 percent of the total area (Mainland and Zanzibar) planted with oil seeds.

### 2.5.3.1 Groundnut

The number of households growing groundnuts in Tanzania during the long rainy season was 870,084 (868,444 on the Mainland and 1,640 in Zanzibar) and 169,898 households in the short rainy season (168,705 households on the Mainland and 1,194 in Zanzibar). This represents

19.1 percent of the total crop growing households in Tanzania in the long rainy season and 8.9 percent in the short rainy season. Shinyanga, Tabora and Dodoma, were the major groundnut production regions (Chart 2.39 and Map 2.31).

The area under groundnuts in the three regions were 281,867 ha (59.9%) of the total area planted with groundnuts on the Mainland, accounted for the production of 208,929 tons (61.3%) of the total quantity harvested

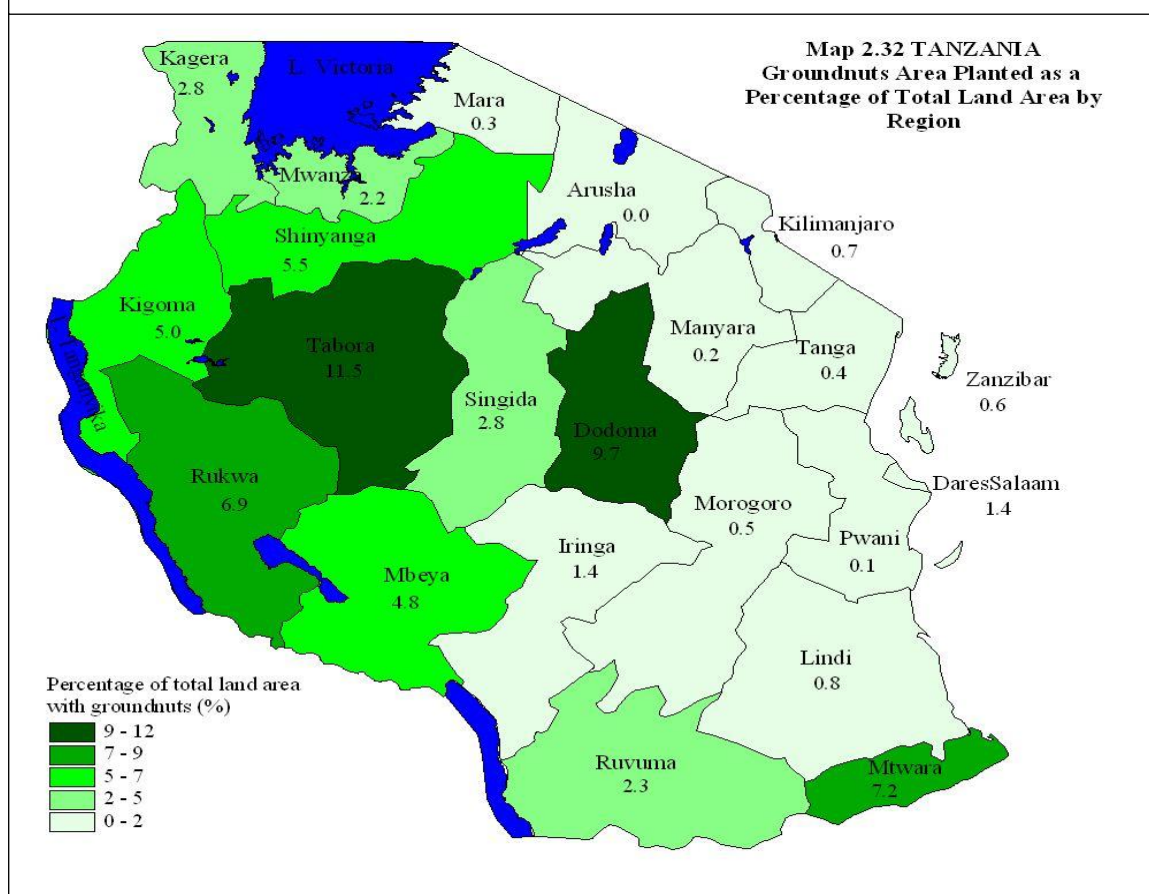

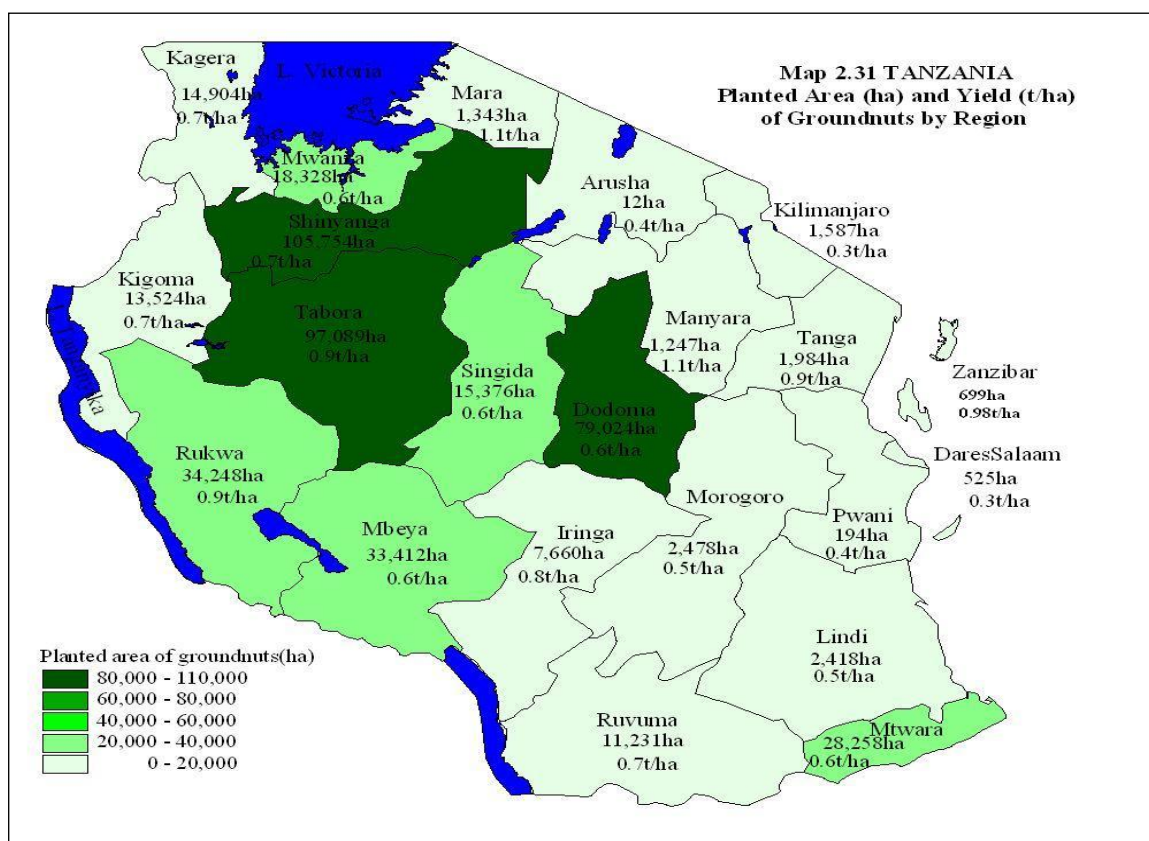

In the overall (Map 3.32), Shinyanga region had the highest percent of area planted with groundnuts (22.4% of total area planted with groundnuts), followed by Tabora (20.6%) and Dodoma (16.8%). However, the highest proportion of land with groundnuts (Chart 2.39) was found in Tabora (11.5% of the total planted area) followed by Dodoma (9.7%), Mtwara (7.2) and Rukwa (6.9%) with Tabora having replaced Dodoma in the top position occupied in 2002/03 (Agriculture Census data). The lowest proportion of land planted with groundnuts was in Arusha region (0.004%) which was insignificant.

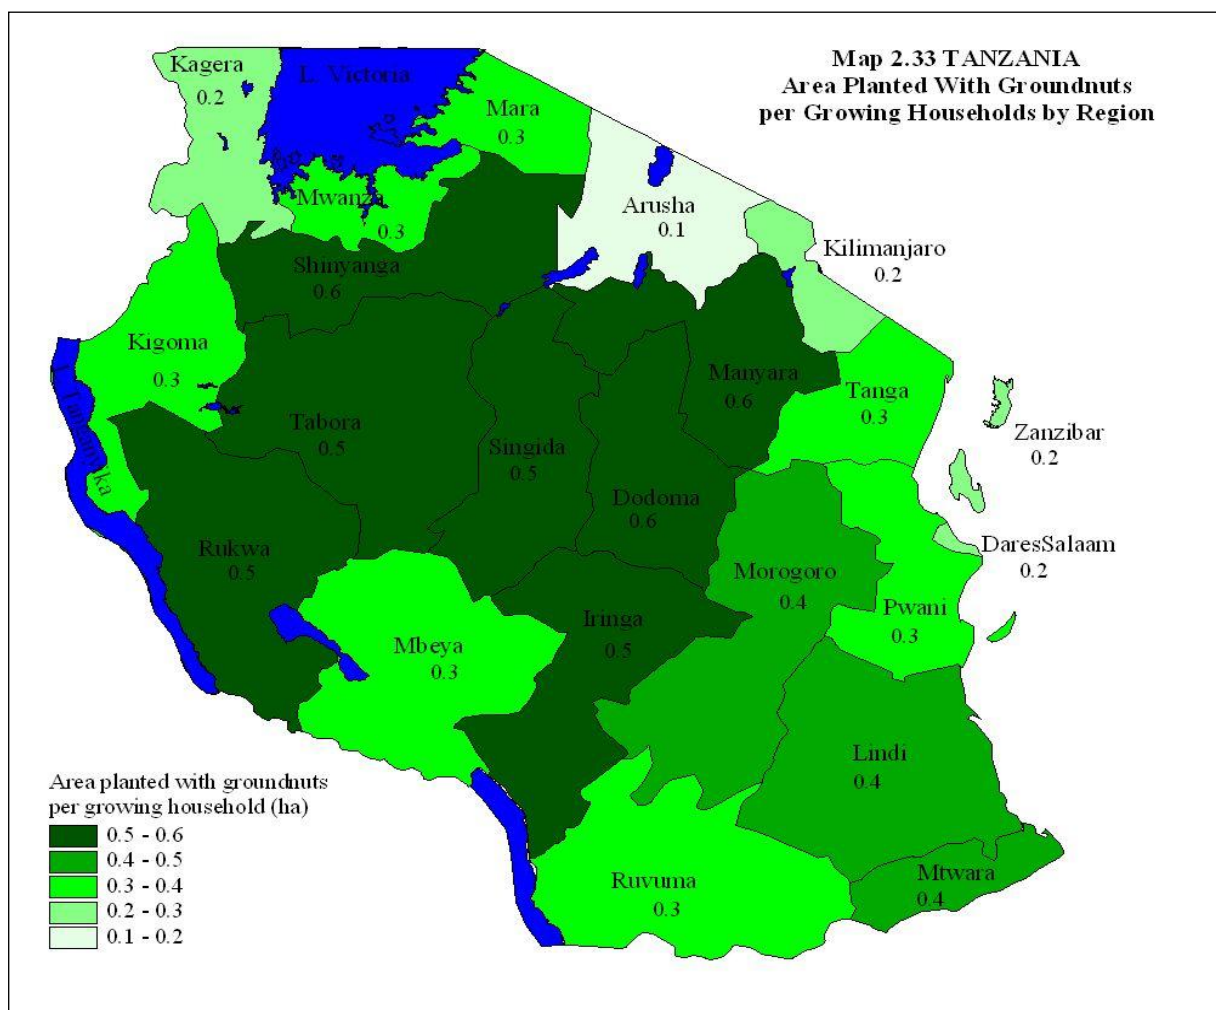

However, Dodoma region (Chart 2.40 and Map 2.33) had the largest planted area per household (0.64 ha) followed by Manyara (0.59 ha), Shinyanga (0.56 ha), Rukwa (0.55 ha), Tabora (0.54 ha) and Singida (0.50 ha).

Table 2.3 Area Planted and Quantity Harvested by Season and Oil Seed Crop types

Crop	Season	Main				Zanzibar				Total			
		Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)	Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)	Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)

### 2.5.4 Fruits and Vegetables

There is a wide range of fruit and vegetable crops produced in the country (Table 2.4 and Chart 2.41) but most of the fruits were produced from permanent tree crops, hence the only fruit crop included in this census data was water melon. The greatest bulk of the fruits and vegetables were

produced in the Mainland and tomato was the single most dominant vegetable crop (Charts 2.41 and 2.42). The combined area planted with tomatoes in the Mainland and Zanzibar was 26,612 ha. In the Mainland the largest area, 17,228 ha (64.7%), was planted in the long rain season and 8,163 ha (30.8%) in the short rain season Table 2.4). Tomatoes contributed the highest

percent of harvested quantity (321,128 tons 63%) to the total harvested quantity of fruits and vegetables. (Chart 2.41 and 2.42).

Most of the fruits and vegetables were planted in the long rain season, except water melon for which both the area planted (1,865 ha) and the quantities harvested (10,585.4 tons) for the short rain season were higher than for the long rain season (Table 2.4). In Zanzibar, both the number of households engaged in fruit and vegetable production and the area with these crops was limited but generally tomato was the leading crop in which the highest number of households (7,317) were involved and the total harvest for the combined season was (6,141 tons) which is higher than any other vegetable.

#### 2.5.4.1 Tomato

The number of households growing tomatoes in Tanzania during the long rainy season was 85,715 (81,838 on the Mainland and 3,877 in Zanzibar) and 49,972 households in the short rain season (46,532 on the Mainland and 3,440 in Zanzibar). This represents 1.5 percent of the total crop growing households in Tanzania in the long rainy season and 0.9 percent in the short rainy season which is 0.5% and 0.1% decrease, respectively, compared to 2002/03 (Agriculture Sample Census). Most of tomatoes were produced on the Mainland where 128,370 households representing 94.6% of the tomato growers engaged in tomato production, while the remaining 5.4% (7,317 households) produced tomatoes in Zanzibar.

The five leading regions with the largest planted area of tomatoes (Chart 2.43 and Maps 2.34 and 2.35) were Morogoro (2,442 ha, 9.2% of tomato planted area), followed by Kagera (2,386 ha, 9%) Tanga (2,326 ha, 8.7%), Mwanza (2,235 ha, 8.4%) and Iringa (2,223 ha, 8.4%).

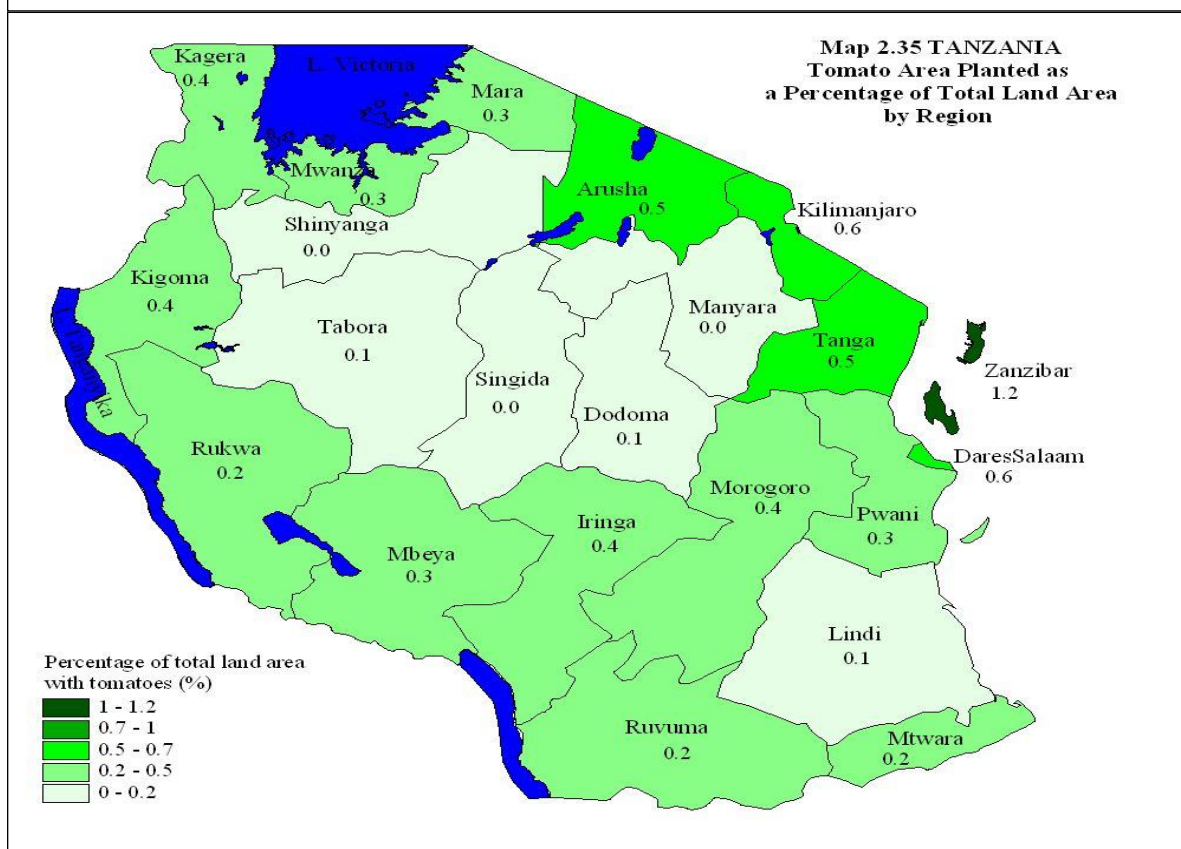

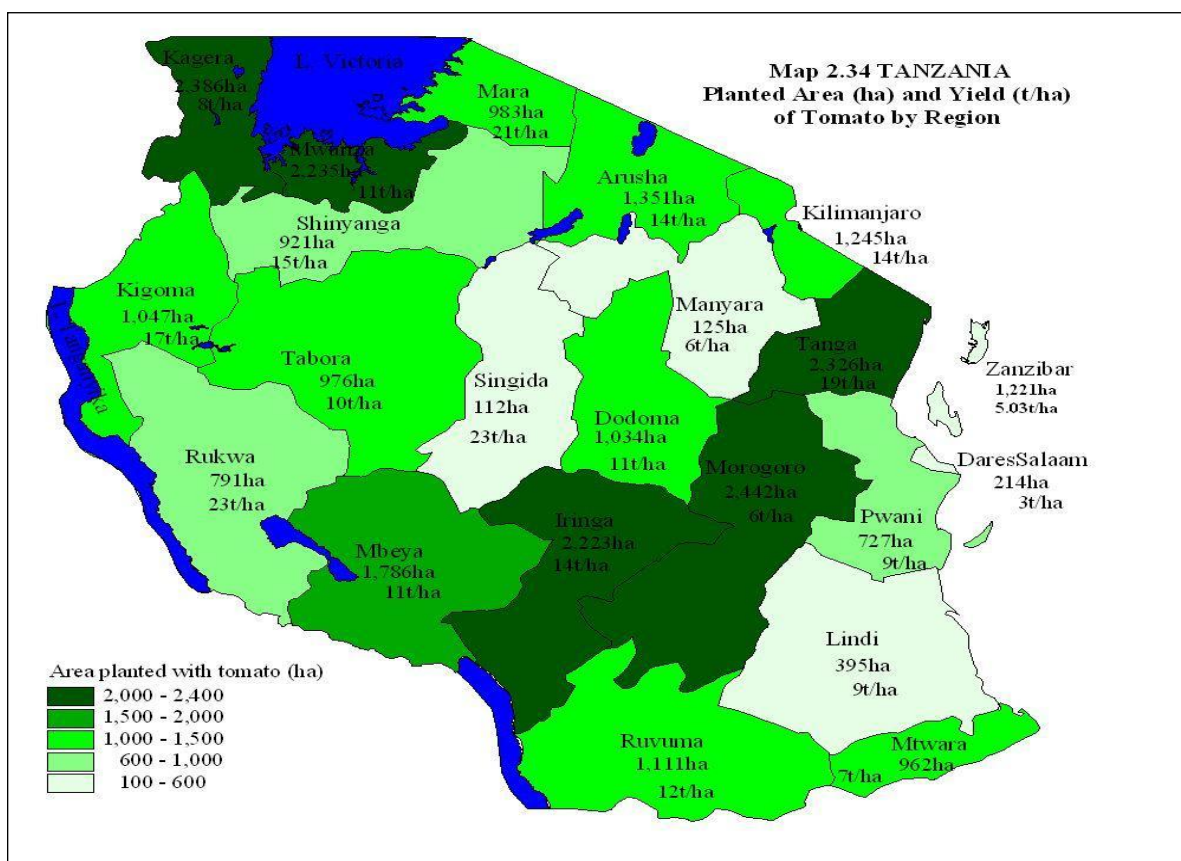

---

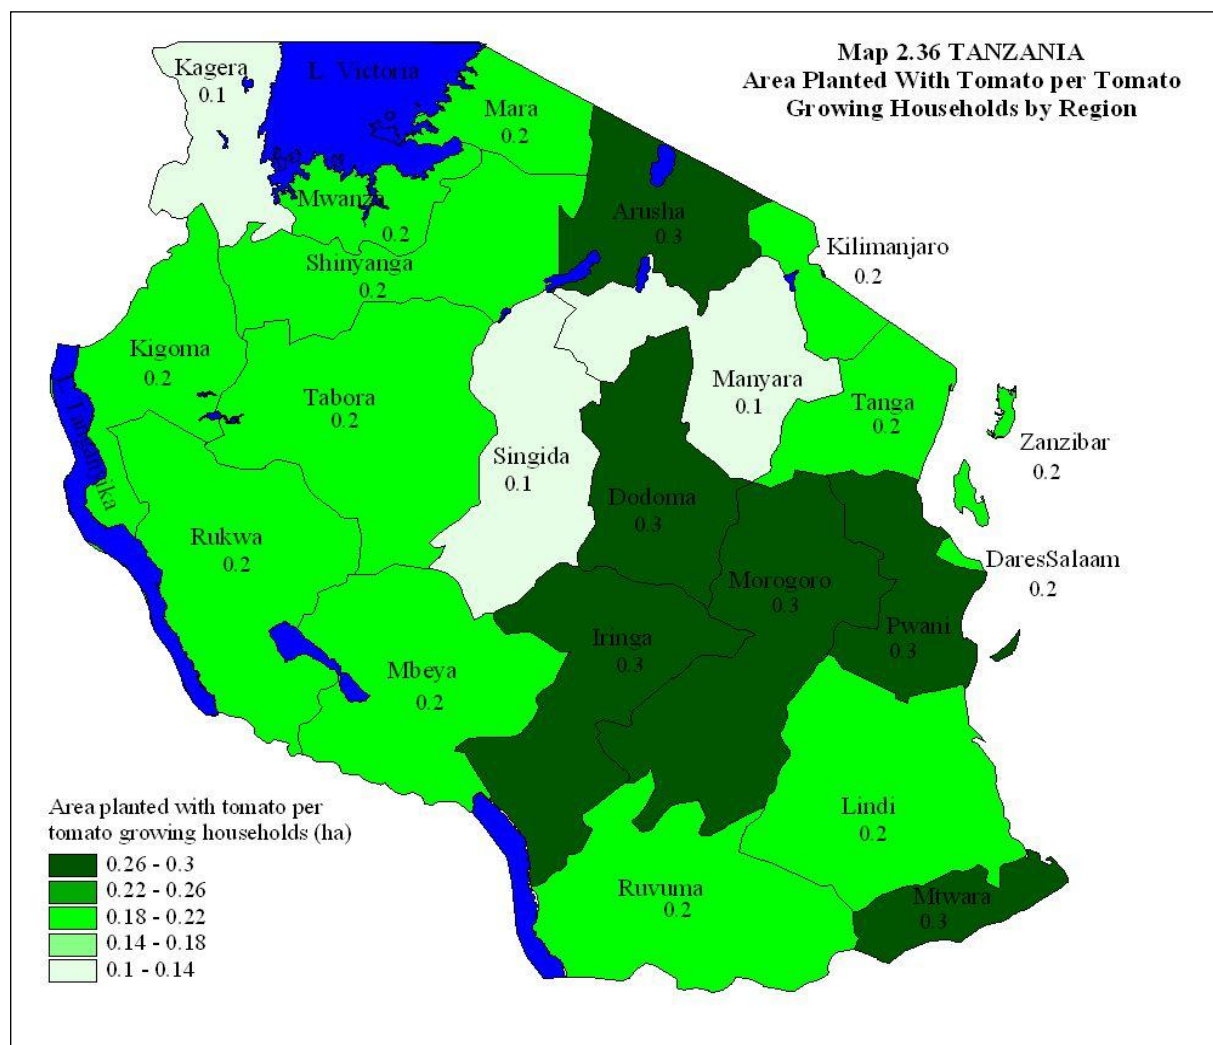

Most other regions had lower percentage of land used for tomato production, with Singida and Manyara regions having the least area planted with tomatoes 112 ha 0.4% and 125 ha, 0.5%, respectively.

The proportion of land with tomatoes was high in Zanzibar (1.0% of the total planted area) followed by Kilimanjaro and Dar es Salaam (0.6%) and Tanga (0.5%). The lowest proportion was found in Manyara and Singida (0.02%) (Chart 2.43 and Map 2.35). Tomato growers generally maintained small holdings averaging less than 0.25 ha per household, in most cases (Map 2.36)

**Table 2.4 Fruit and Vegetable Production (Tons)**

Crop	Season	Mainland				Zanzibar				Total			
		Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)	Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)	Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)

#### 2.5.4.2 Cabbage

Cabbage was planted to a limited extent in Zanzibar but predominantly in the Mainland for all regions except Lindi and Mtwara regions. However, compared to tomatoes, cabbage was relatively less popular. The number of households growing cabbage during the long rain season was 24,326 (24,310 on the Mainland and 16 in Zanzibar) and 16,291 in the short rain season (16,199 on the Mainland and 92 in Zanzibar) of which only 0.1% long rain season and 0.6% short rain season were in Zanzibar (Table 2.7). Cabbage production was dominant in three regions (Chart 2.44 and Map 2.38) of which Kagera had the largest planted area (1,094 ha, 19% ), followed by Tanga (964 ha, 16.8% ) and Iringa (790 ha, 13.7% ).

Other regions with relatively smaller planted areas within the range of 1% to 7.5% included Arusha, Mbeya, Mara, Morogoro, Ruvuma, Mwanza, Kilimanjaro, Tabora, Rukwa, Shinyanga, Kigoma and Manyara regions. On the other hand, Dodoma, Pwani, Dar es Salaam,

and Zanzibar each having very small land areas (less than 15 ha) used for cabbage production (Chart 2.44 and Map 2.38).

Generally, households maintained small planted areas, often less than a quarter hectare (Map 2.39), and the highest at 0.25 ha/household was in Singida region.

### 2.5.4.3 Onion

Onion was produced both in Zanzibar and in the Mainland in all regions except Mtwara. Generally, the planted area under this crop has increased considerably compared to the 2002/03 Agriculture Sample Census. A total of 8,781 ha were planted with onions, representing a small proportion (0.076%) of the total planted area (11,554,684 ha), predominantly in the Mainland (8,775 ha, 99.9% of the total planted area in the country) with Zanzibar having only 6 ha planted with the crop. Onions were grown predominantly during the long rains in the Mainland but only during the short rains in Zanzibar (Table 2.7). A total of 35,309 households (short and long rains combined) planted onions of which 63 were in Zanzibar (0.2% of total growing households).

The planted areas and percent of total land planted was generally low in all the regions with a maximum of 0.3%. (Chart 2.45 and Maps 2.40 and 2.41). The major onion growing area was Singida region which accounted for 17.8% of the onion planted area (1,564 ha,) followed by Mbeya (10.3%, 907 ha,). This was a shift from the trend in 2002/03, as the Agriculture Sample Census

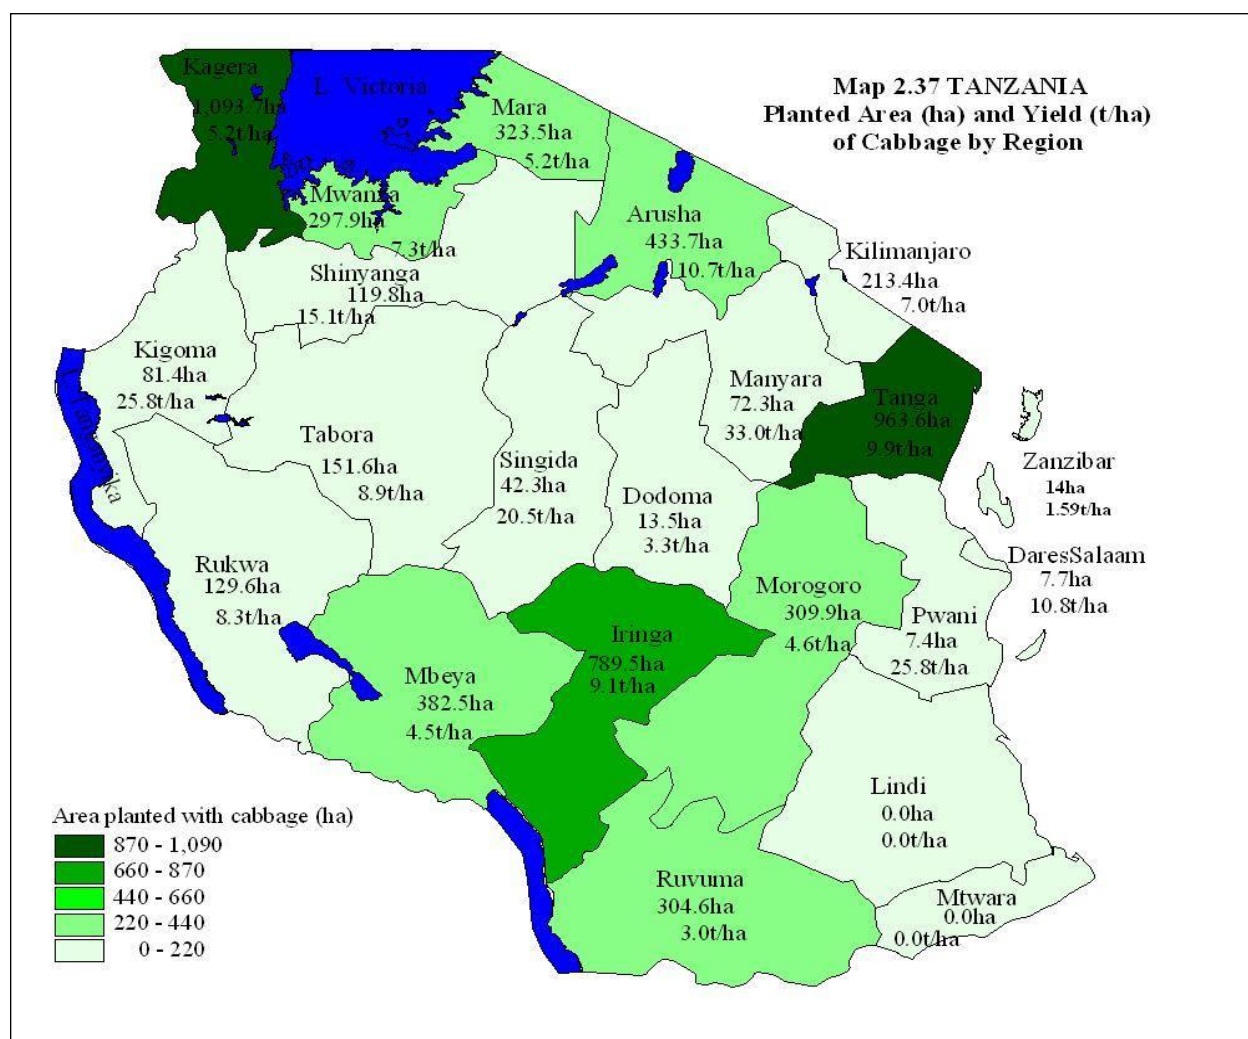

data then indicated Arusha having the largest planted area of onions (2,558 ha, 23.7%) followed by Tabora region (1,507 ha, 14%).

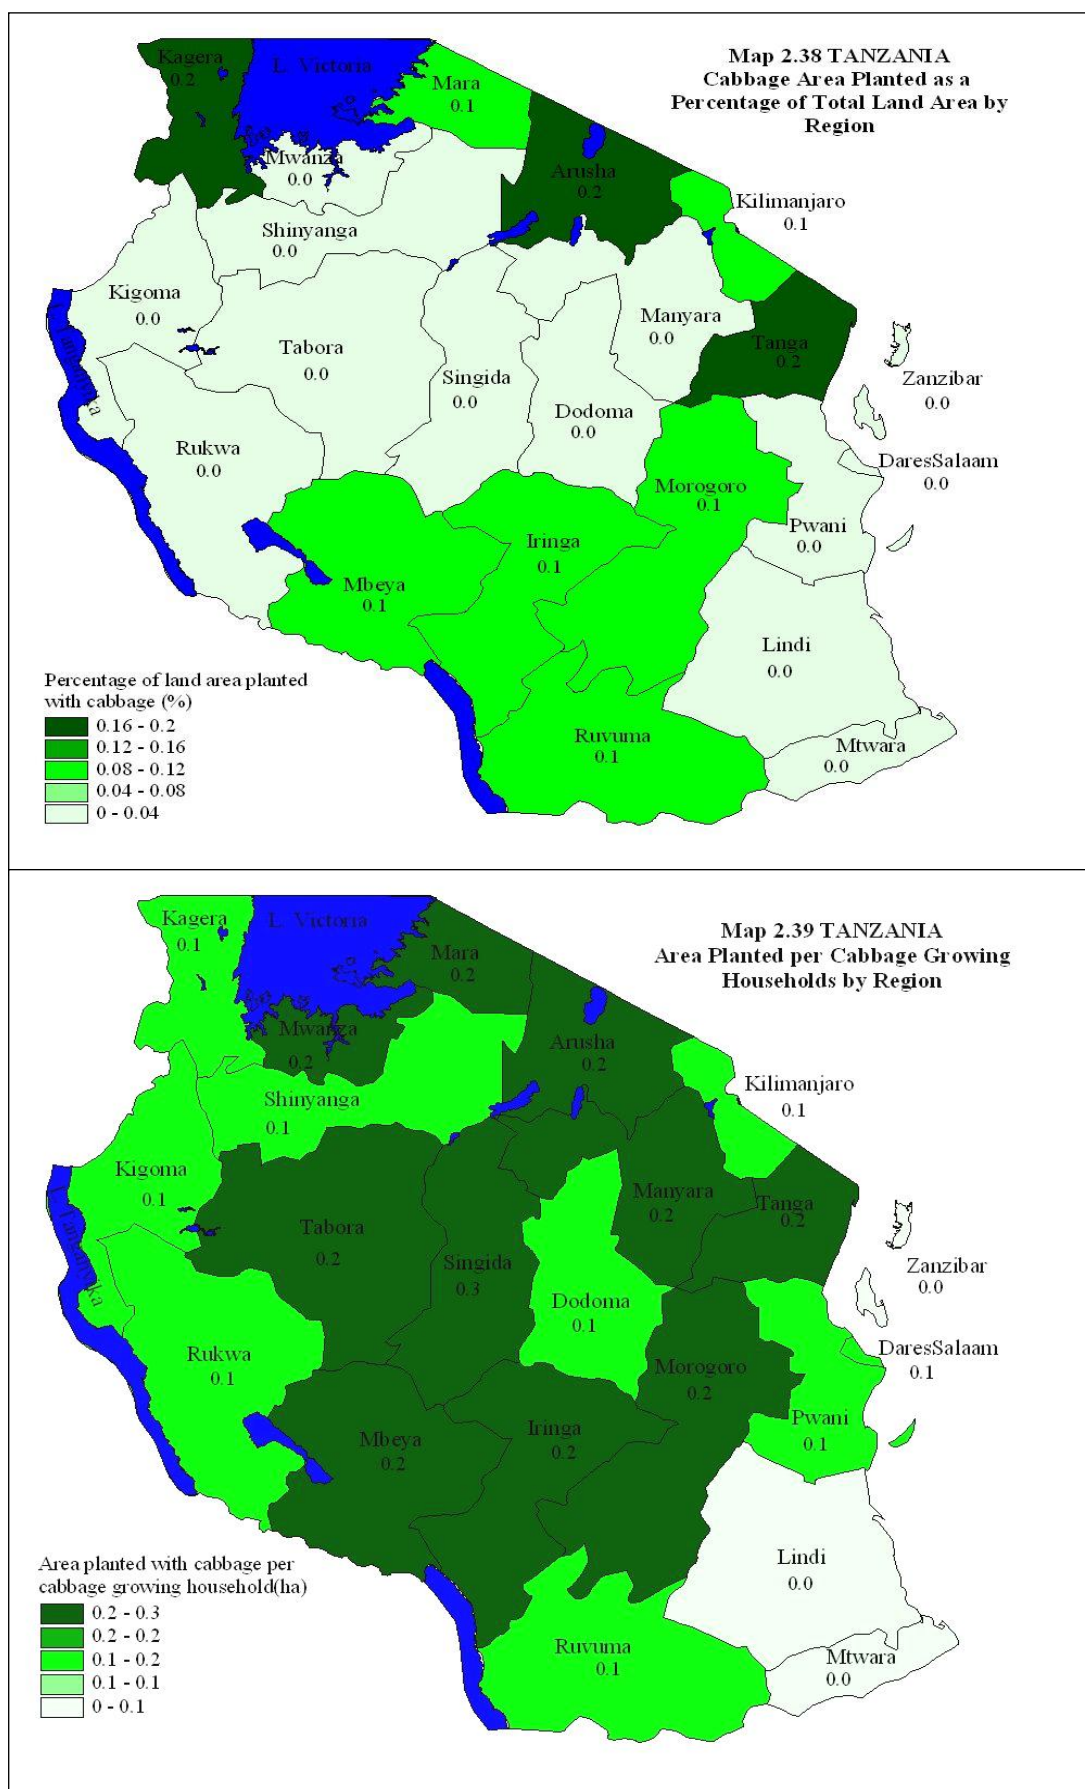

In this census, other regions with relatively smaller planted areas were Arusha (754 ha, 8.6%), Iringa (737 ha, 8.5%) and Ruvuma (650 ha, 7.4%). The remaining regions had much smaller land areas as to make the crop virtually absent. These include Pwani, Dar es Salaam, Kigoma and Mtwara regions and Zanzibar

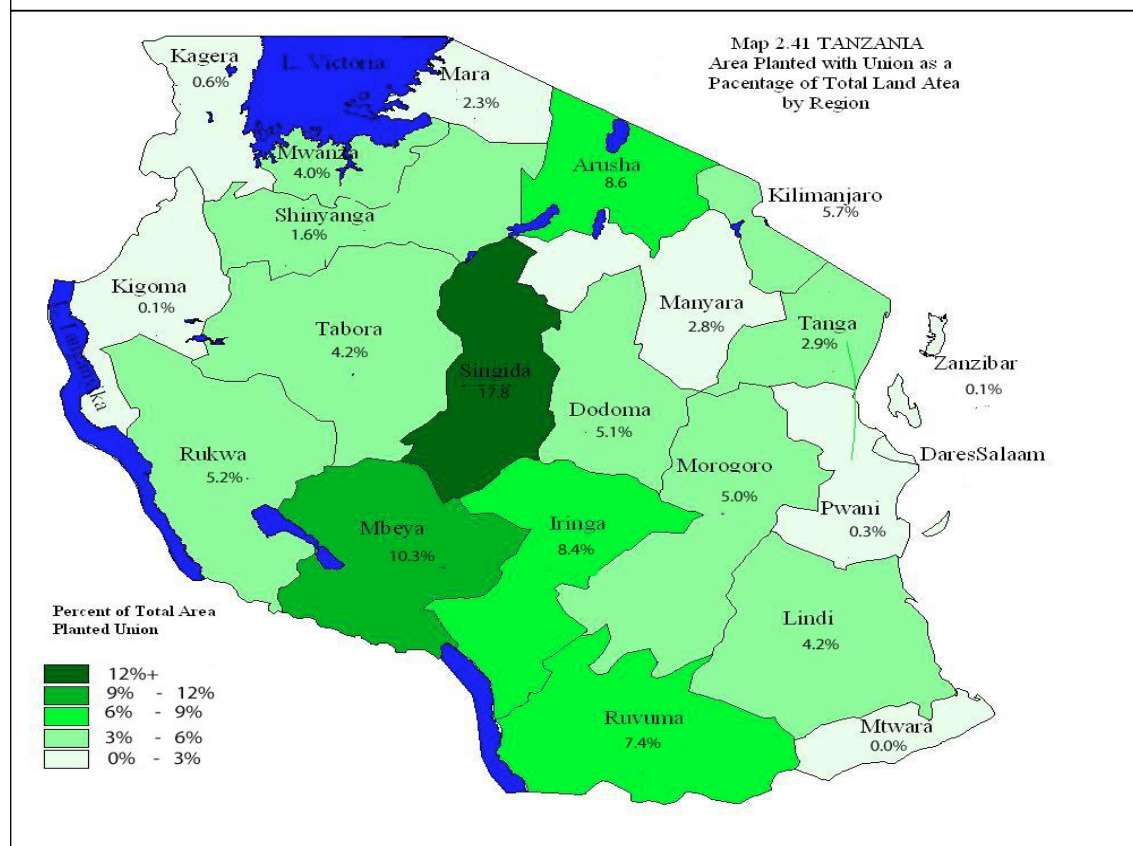

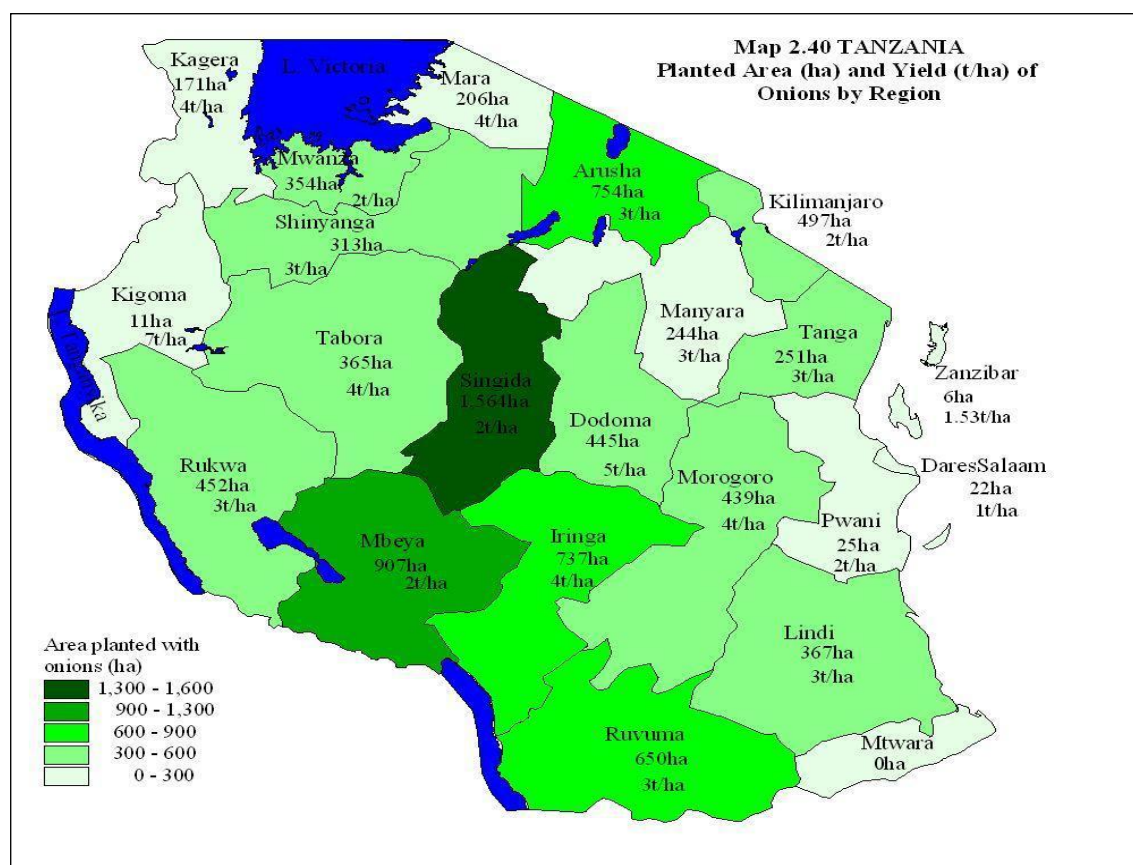

Yields highly varied between regions. The highest yield was in Kigoma (7 t/ha), followed by Dodoma (5t/ha), Mara, Tabora, Morogoro and Iringa regions each with 4t/ha. Lower yields were recorded in Dar es Salaam and Zanzibar having the average of one ton per hectare (Map 2.40). Individual household planted onions on small holdings, the largest average being 0.45 ha per household in Singida region (Chart 2.45 and Map 2.42).

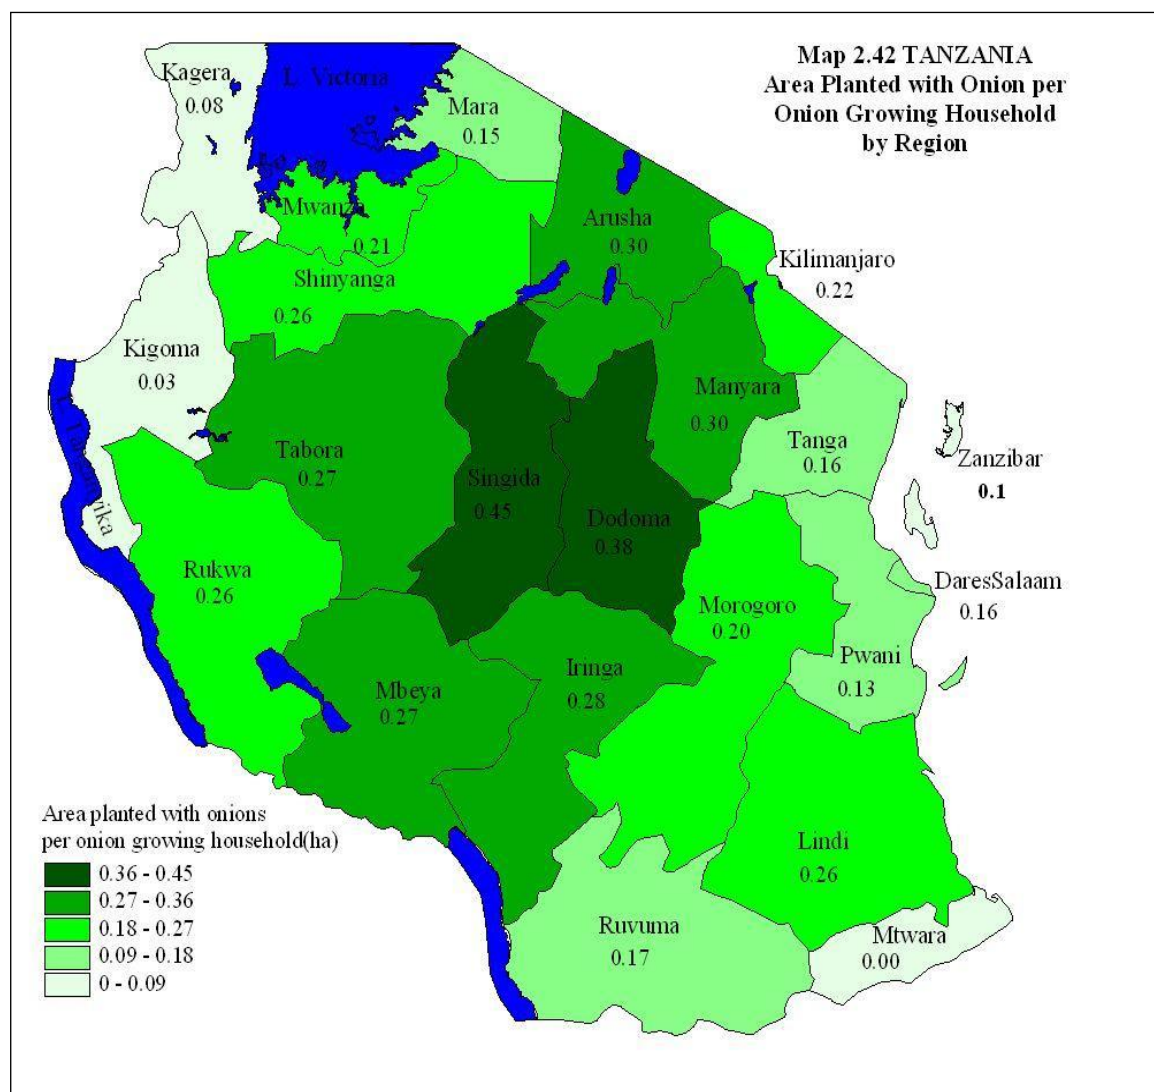

### 2.5.5 Other Annual Cash Crops

There are some other annual crops that are designated as cash crops that were planted in the country. These included cotton, tobacco, pyrethrum and other annual cash crops (Chart 2.46 and Table 2.5). The 2007/08 Agriculture Census data indicated that most of the crops in this category were planted during the long rain season 514,831 ha (80.1%) compared to the short rain season (128,127 ha 19.9%). Amongst the crops, cotton occupied the largest land

area, in both the short and long rainy season with a total of 574,836 ha (89%) and engages the largest number of households in both seasons, compared to all other crops combined. The other crops, in diminishing importance (Chart 2.5), were tobacco 64,572 ha, (10%) and pyrethrum with 3,531 ha (1%) of the land planted with the crops, respectively.

**Table 2.5 Area Planted and Quantity Harvested by Season and Type of Other Crops**

Crop	season	Mainland				Zanzibar				Total			
		Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)	Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)	Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)

### 2.5.5.1 Cotton

Cotton was planted only in Mainland Tanzania during both Short and Long rain seasons. Comparatively, the number of households which engaged in cotton production was 279,506

(78.7%) of the total households during the long rain season. The total area planted for the cotton during that season was 451,070 ha represented (78.5%) of the total areaTable 2.6. Similarly, the

quantities harvested were higher in the long rain season 361,336.1 tonnes (76.5%) compared to the short rain season 110,796.7 tonnes(23.5%) even though productivity was slightly higher for the short rain season (0.9 ton/ha) than for the long rain season (0.8 ton/ha).

Shinyanga region was the most important region for cotton production (Chart 2.47 and Map 2.43) which accounted for 65.9% of the planted area 378,666 ha in the country. Other cotton producing regions were Mwanza being the second (108,329 ha or 18.8%) followed by Tabora (57,901 ha or 10.1%). Mara (18,634 ha or 3.2%) and Kagera (6,856 ha or 1.2%) had very small areas planted with cotton. The remaining regions except Dodoma, Kilimanjaro, Dar es Salaam, Mtwara and Iringa in the Mainland had less than 1% of cotton planted area, accounted for 0.8 percent of the total planted area (Chart 2.47). In Zanzibar cotton was not planted.

**Table 2.6 Cotton Production by Region**

Region	Number of Household	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (tons/ha)
Manyara	632	959	1,438	1.50
Arusha	119	145	217	1.50
Tanga	130	53	79	1.50
Morogoro	88	36	44	1.24
Rukwa	675	365	437	1.20
Mara	21,151	18,634	19,257	1.03
Kagera	8,326	6,856	6,473	0.94
Mwanza	108,405	108,329	94,725	0.87
Shinyanga	235,946	378,666	307,077	0.81
Singida	2,185	2,122	1,603	0.76
Tabora	25,514	57,901	40,504	0.70
Ruvuma	81	16	10	0.59
Kigoma	373	378	149	0.40
Pwani	332	314	108	0.35
Lindi	94	46	9	0.21
Mbeya	79	16	2	0.15
Dodoma	0	0	0	0
Kilimanjaro	0	0	0	0
Dar es Salaam	0	0	0	0
Mtwara	0	0	0	0
Iringa	0	0	0	0
<b>Zanzibar</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>
<b>NATIONAL</b>	<b>404,131</b>	<b>574,836</b>	<b>472,132.77</b>	<b>.19</b>

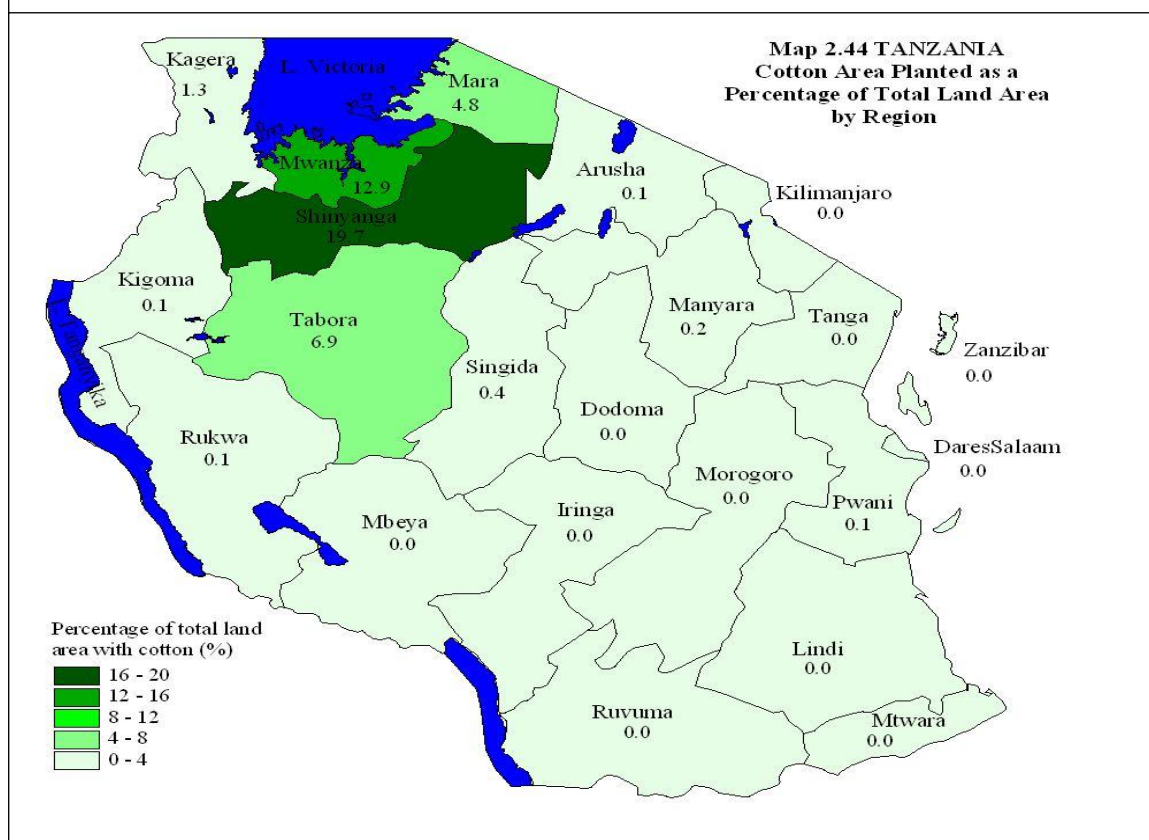

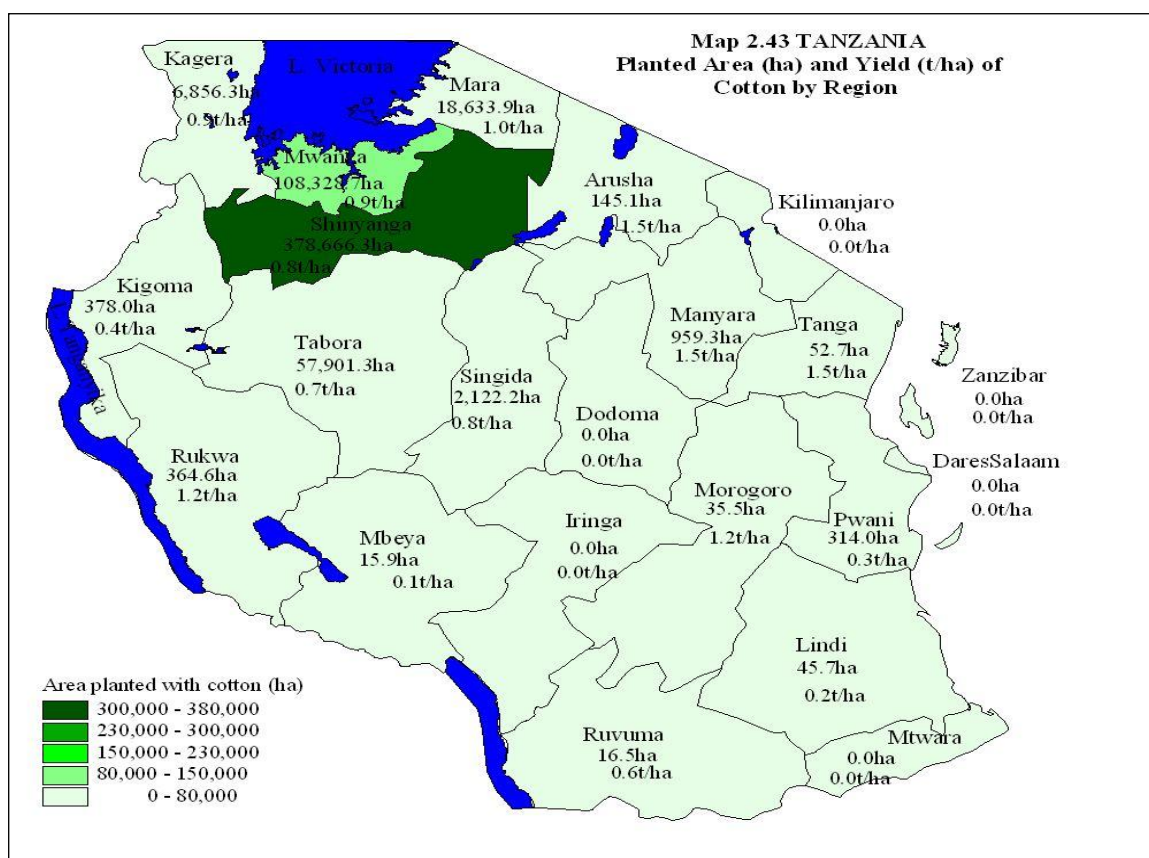

The highest seed cotton yield was 1.5 t/ha recorded in Manyara, Arusha and Tanga regions, all of which had relatively small planted areas, compared to Shinyanga, Mwanza and Tabora where yields were 0.8, 0.9, and 0.7 tons/ha, respectively. The second highest yielding cohort comprised of Morogoro, Rukwa and Mara regions with seed cotton yields of between one and 1.2 t/ha, while in all other production regions, yields were below one ton per hectare. The lowest yield was 0.2 t/ha in Mbeya region (Map 2.43).

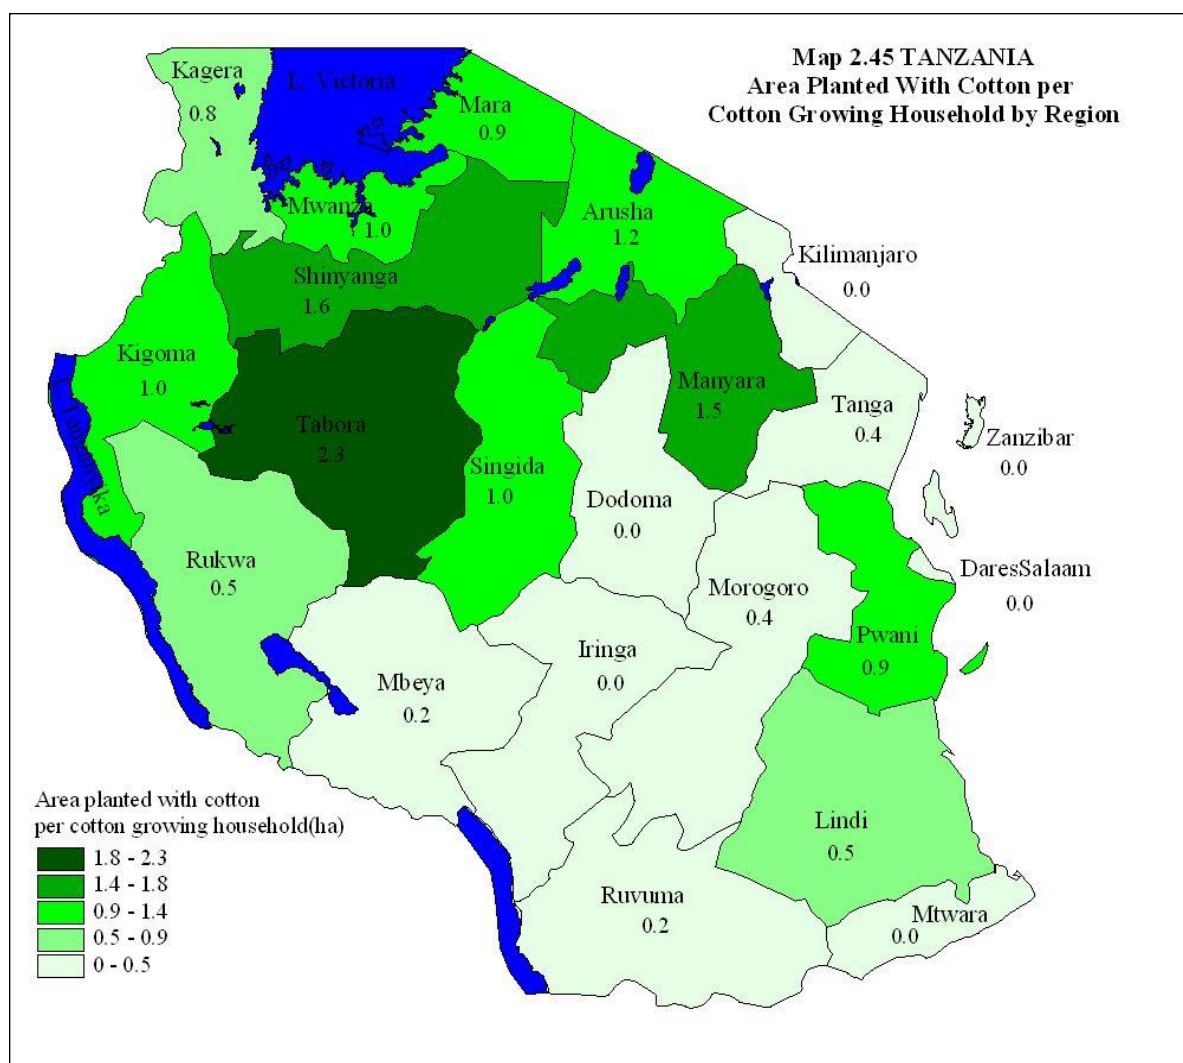

However, the total quantities harvest (Table 2.6) were largest in Shinyanga (307,077 tons, 65% of total harvested quantity), despite the relatively low productivity (0.8 t/ha), due to the large planted area. The second largest harvested seed cotton was in Mwanza (94,125,

20%) followed by Tabora (40,504 tons, 8.6%) and Mara (19,257 tons, 4%). The remaining 2.4% of the harvested seed cotton was produced by the remaining 11 regions that also produced cotton.

The cotton planted area per household (Map 2.45) was highest in Tabora (2.3 ha) while other regions where households planted at least one hectare, in a decreasing order were, Shinyanga (1.6 ha), Arusha (1.2 ha) and Kigoma and Mwanza (1.0 ha).

### 2.5.5.2 Tobacco

Tobacco was produced only in the Mainland where it occupied about 64,572 ha in 17 regions and was not planted in

**Table 2.7 Tobacco Production by Region**

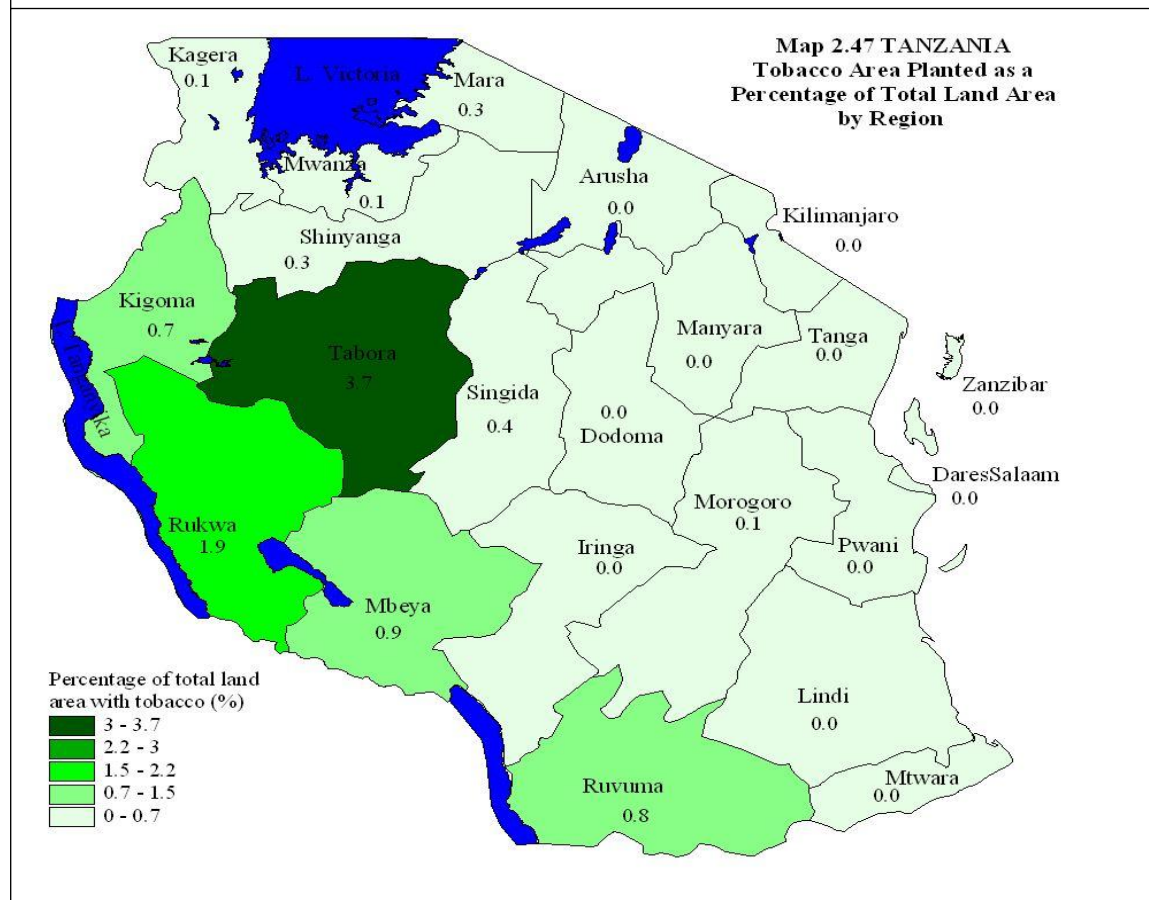

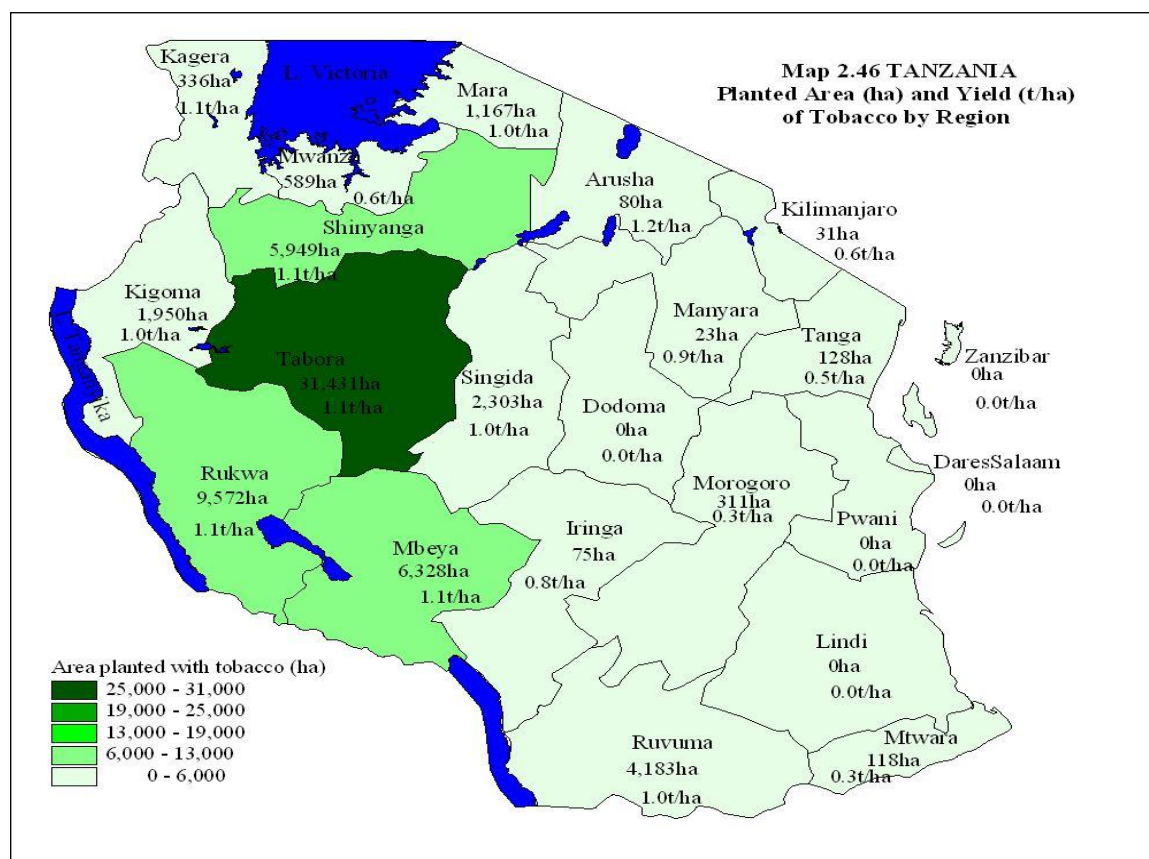

Region	Number of H/holds	Actual Planted Area (ha)	Quantity Harvested (tons)	Yield (t/ha)
Tabora	33,987	31,431	36,056	1.15
Rukwa	11,339	9,572	10,661	1.11
Mbeya	5,983	6,328	6,646	1.05
Shinyanga	6,269	5,949	6,402	1.08
Ruvuma	5,832	4,183	4,192	1.00
Singida	1,929	2,303	2,279	0.99
Kigoma	3,021	1,950	1,988	1.02
Mara	2,253	1,167	1,177	1.01
Mwanza	869	589	372	0.63
Kagera	822	336	363	1.08
Morogoro	977	311	108	0.35
Tanga	316	128	58	0.46
Mtwara	232	118	35	0.30
Arusha	151	80	93	1.16
Iringa	328	75	59	0.79
Kilimanjaro	277	31	18	0.58
Manyara	207	23	21	0.91
Dodoma	0	0	0	0
Pwani	0	0	0	0
Dar es Salaam	0	0	0	0
Lindi	0	0	0	0
<b>Zanzibar</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>
<b>NATIONAL</b>	<b>6,894</b>	<b>64,572</b>	<b>70,526</b>	<b>-</b>

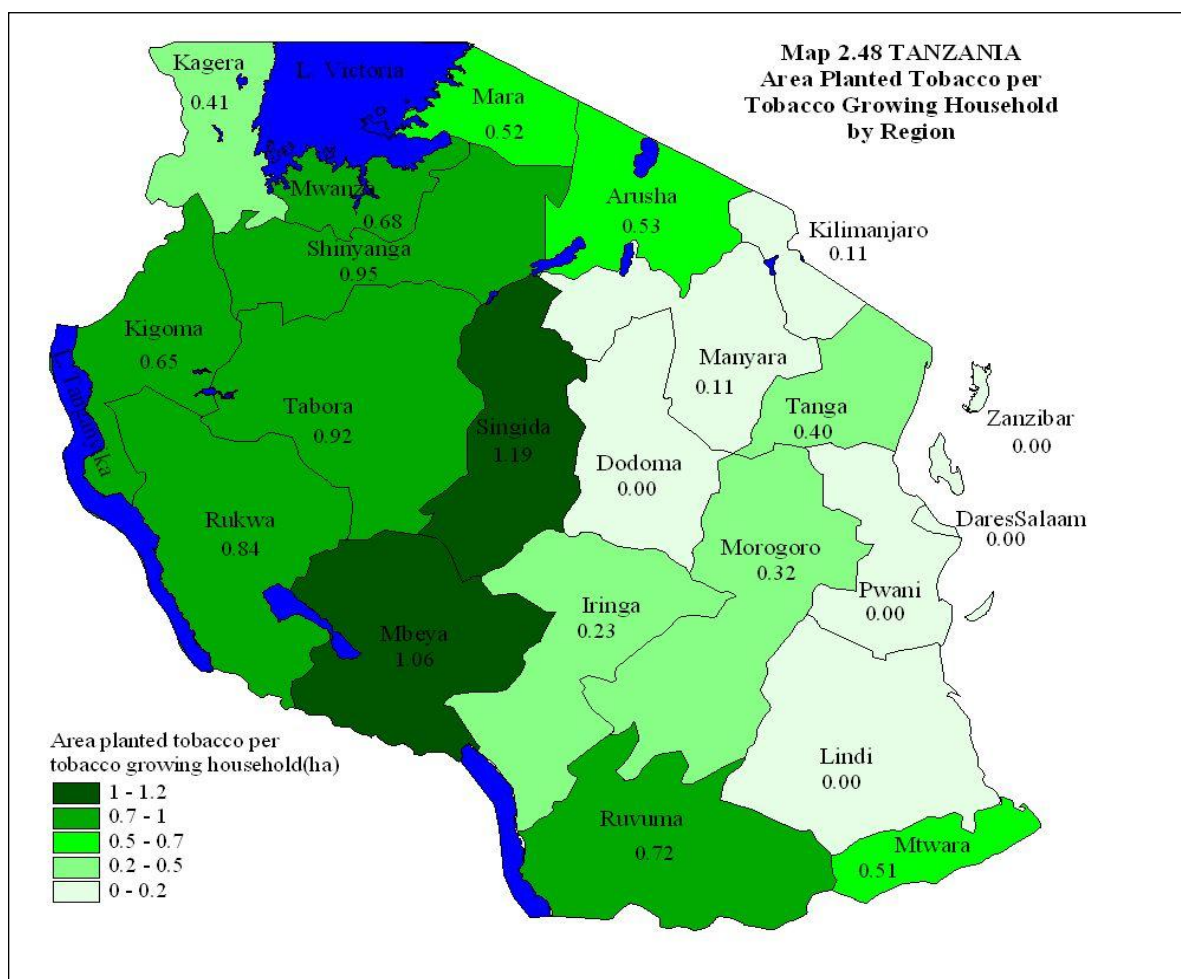

Dodoma, Pwani, Dar es Salaam and Lindi (Chart 2.48, Table 2.7 and map 2.46). Comparatively, Tabora region had the largest number of households producing tobacco (Table 2.7,) which were estimated to be 33,987 (45.4%); the largest planted area (31,431 ha, 48.7% of total area planted with tobacco); the largest proportion (0.037) of land planted with tobacco (Map 2.47) and accounted for the largest production (Table 2.7) equivalent to 51.1% of total harvested quantity (36,056 tons), (Chart 2.49)

Other regions that were engaged in tobacco production, with decreasing acreage, were Rukwa 9,572 ha (14.8%). Mbeya 6,328 ha (9.8%), Shinyanga 5,949 ha (9.2%), Ruvuma 4,183 ha (6.5%) and Singida 2,303 ha (3.6%). Other producing regions had planted area below 2000 ha, the lowest being Manyara with 23 ha (0.04%), (Chart 2.48, Table 2.7 and 2.52 Map 2.46)

Planted area per household was generally below one hectare (Map 2.48), being highest at 0.92 ha/household in Tabora, followed by Rukwa (0.84 ha), Mwanza (0.68 ha/household), Arusha (0.53 ha/household) and Mara (0.52 ha/household). The planted area per household in all other production regions was below half a hectare and was lowest in Manyara and Kilimanjaro each with 0.11 ha/household.

## 2.6 Comparative Planted Land Areas for Annual and Permanent Crops

Permanent or perennial crops refer to crops that usually take over a year to mature and once mature can be harvested for a long time extending over several years or even decades. Annual crops, on the other hand, are planted and harvested within the same season, implying that planted lands are regularly worked out every year to prepare suitable seedbeds for planting.

By comparison, the 2007/08 Census data showed that most of the cultivated land in Tanzania (8,808,771 ha, 85% of total planted area) was planted with annual crops and the remaining 15% (1,550,798 ha) was under permanent crops (Chart 2.50). This is indicative of the dependency of most farmers on annual field and horticultural crops for household food requirements and income generation.

## 2.5.2 Perennial/Permanent Crops

### Definition

*Perennial or permanent crops refer to crops that normally take over a year to mature and once mature can be harvest for a number of years. For most crops it is easy to determine if they are annual or permanent. However, for crops like cassava and bananas the distinction is not so clear. Cassava has varieties that mature within a year and produces only one harvest, whilst other varieties survive for more than one year and produces several harvests.*

*In this census cassava was treated as an annual crop. Bananas normally take less than a year to mature and produce a harvest and survive for more than one year. Bananas are treated as permanent crops in the census.*

In this report the results are presented for the most important permanent crops in terms of production, yield and area planted.

For the 2007/08 Agriculture Sample Census, the number of smallholder households growing permanent crops is 2,457,532 (2,338,106 households on the Mainland and 119,427 in Zanzibar).

The total area of permanent crops planted by smallholders and large scale farmers was 2,389,641 hectares. However, permanent crop production was dominated by smallholders who cultivated 96 percent of the total area while only 4 percent of the area was planted by large scale farmers (Chart 2.51).

By comparison, the 2007/08 Census data showed that most of the cultivated land in Tanzania (8,808,771 ha, 79% of total planted area) was planted with annual crops and the remaining 20% (2,389,641 ha) was under permanent crops (Chart 2.52). This is indicative of the dependency of most farmers on annual field and horticultural crops for household food requirements and income generation.

Mtwara (12%), Pwani (12%) and Kagera (11%) regions has the largest area under smallholder permanent crops which was 258,545, 246,159 and 239,942 hectares respectively. These regions

were followed by Ruvuma (201,958 ha), Lindi (187,837 ha) and Tanga (180,570 ha). In terms of area of permanent crops planted per household PwaniShinyanga has the largest area followed by Mtwara and Singida. However, in terms of area of permanent crops planted expressed as a percentage of the total land area per region

**Table 2.8 Area Planted, Quantity Harvested and Yield by Type of Permanent Crop**

Crop	Total Area Planted (ha)	Area harvested (ha)	Quantity harvested (tons)	Yield (tons/Ha)
Cashew nut	531,526	199,579	134,998	0.68
Banana	289,496	201,357	1,889,570	6.60
Coffee	197,050	132,942	186,250	1.40
Coconut	119,899	62,248	120,619	1.94

Tea	6,796	6,388	43,588	6.82
Sisal	35	35	31	.88
Other	768,082	606,991		
<b>Total</b>	<b>2,213,801</b>	<b>1,392,935</b>	<b>3,018,940</b>	

Mtwara has the highest (15%) followed by Dar es Salaam (13%), Zanzibar (10%) and Kilimanjaro (9%).

Table 2.8 presents the production information on some of the major permanent crops grown by smallholders in Tanzania. For all permanent crops, except bananas, the harvest area is used to calculate yield as it normally takes 3 or more years after planting before the crop starts producing.

With bananas and other annual crops the planted area is used to calculate yield. Production and yield data for each of the major crops is provided in Table 2.8.

Table 2.9 as well presents production information of the major permanent crops for Tanzania Mainland, Zanzibar, and from Large Scale Farms.

Crop	Mainland only		Zanzibar		Total Small Scale		Large Scale Farm		Total Planted Area for Tanzania
	Number of house-holds	Total area planted	Number of households	Total area planted	Number of households	Total area planted	House-holds/farms	Total area planted

### 3.6.3 Cashewnuts

Cashewnuts were produced mainly in six out of the 21 regions in the country on a total area of 289,850 ha by 272,132 households. The regions include Mtwara, Lindi, Pwani, Tanga, Dar es Salaam and Ruvuma. Among the production regions (Chart 2.54 and Map 2.49), Mtwara was the leading cashew producer (185,179 ha, 35% of total planted area) followed by

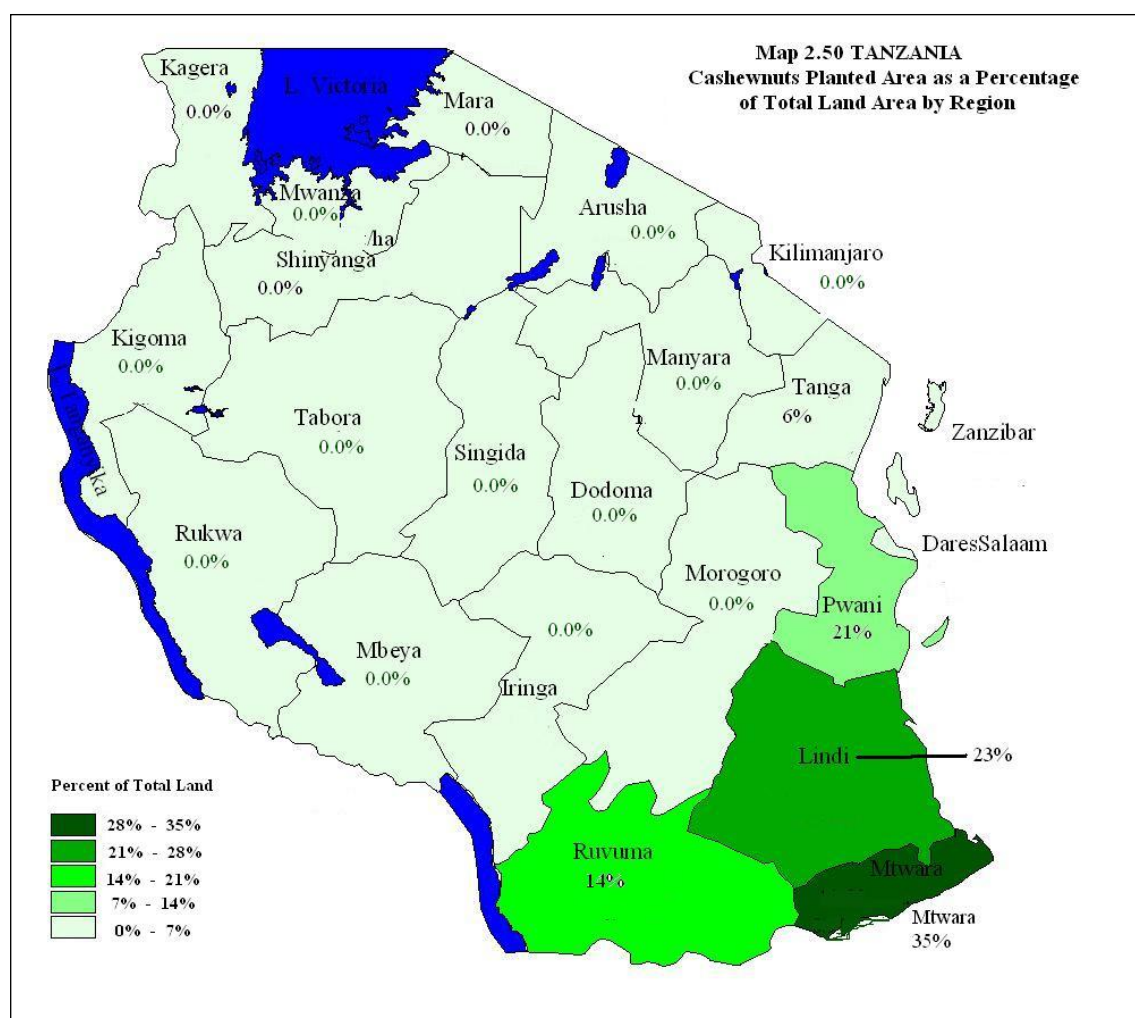

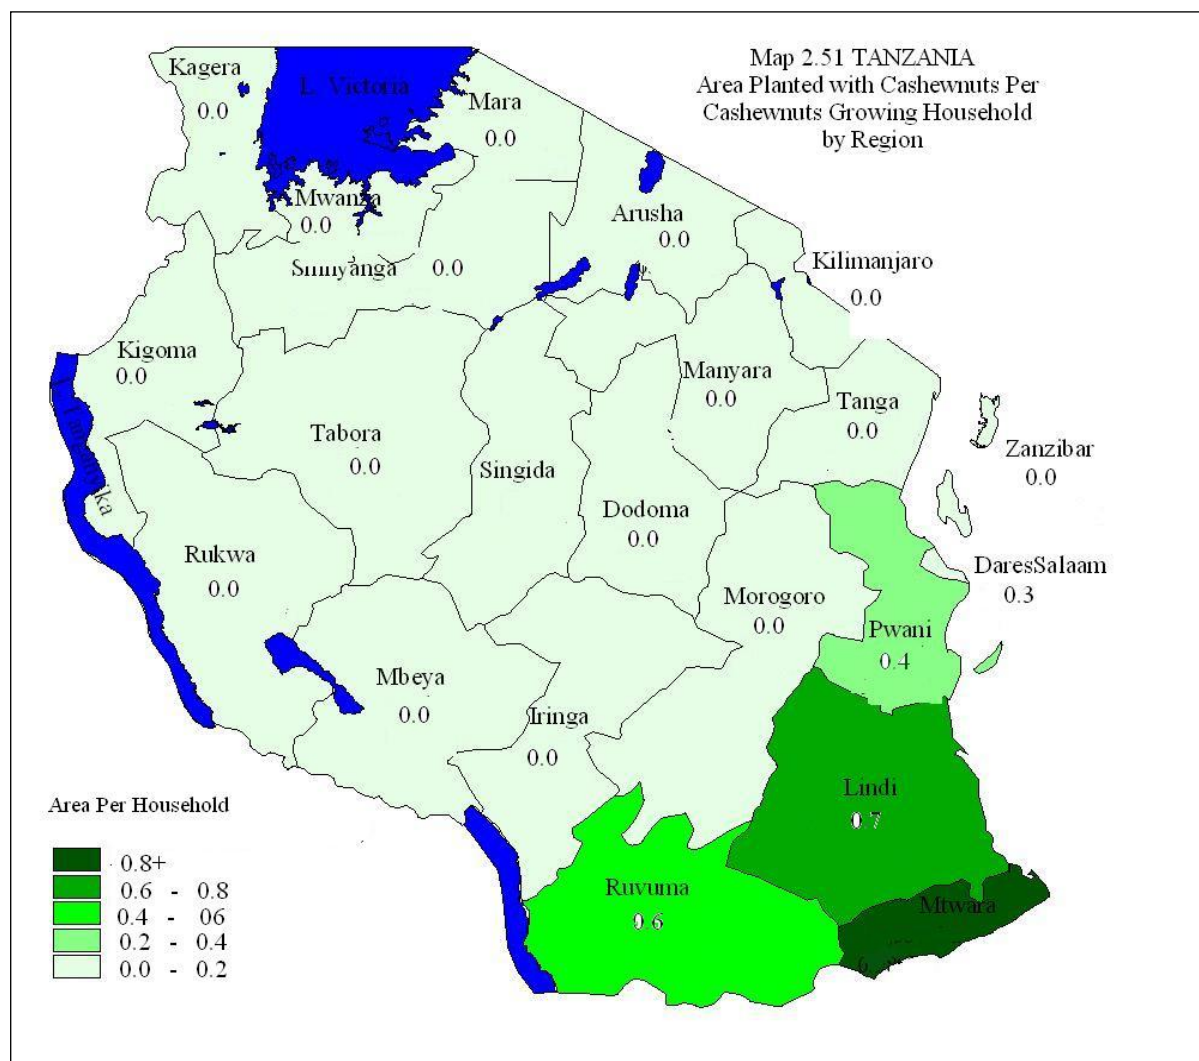

Lindi (123,015 ha, 23%), Pwani (109,112, 21%) and Ruvuma (74,368, 14%). (Chart 2.54 and Map

2.49). Generally yields were higher in the non-traditional production regions with Manyara recording the highest yield (5 t/ha), followed by Mbeya (1.61 t/ha), Tanga (1.07 t/ha) and Dar es salaam (0.97 t/ha). Cashewnut productivity was lower in all other producing regions and was at the lowest level (0.06 t/ha) in Arusha region (Map 2.49).

The largest average planted area per household (3 ha) was in Iringa region, followed by Lindi Pwani, Ruvuma, Tanga and Lindi both recording an average of (2 ha). The 2007/08 Census data also showed that farmers in Singida region which has just recently engaged in cashewnut production, had relatively large average planted area (1 ha/household) when compared to most other production regions (Chart 2.54 and Map 2.51).

### 3.6.4 Banana

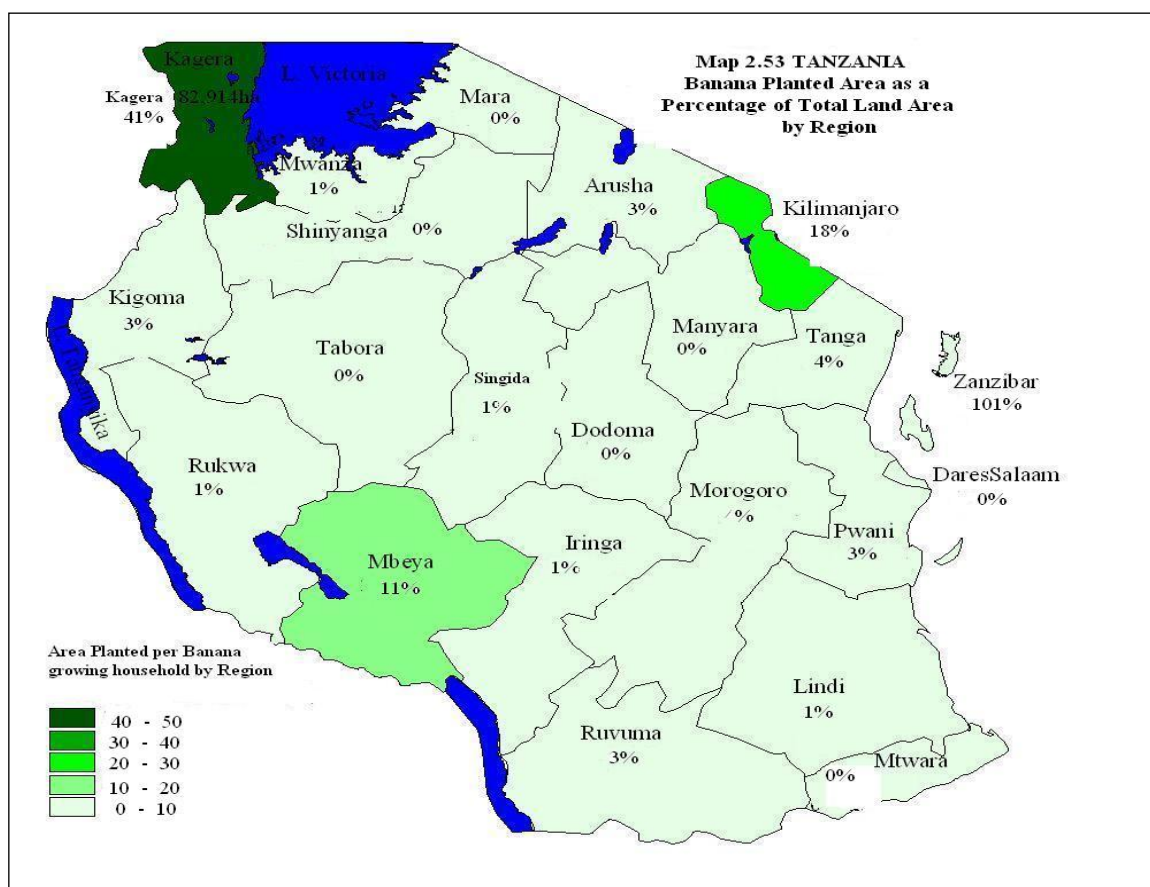

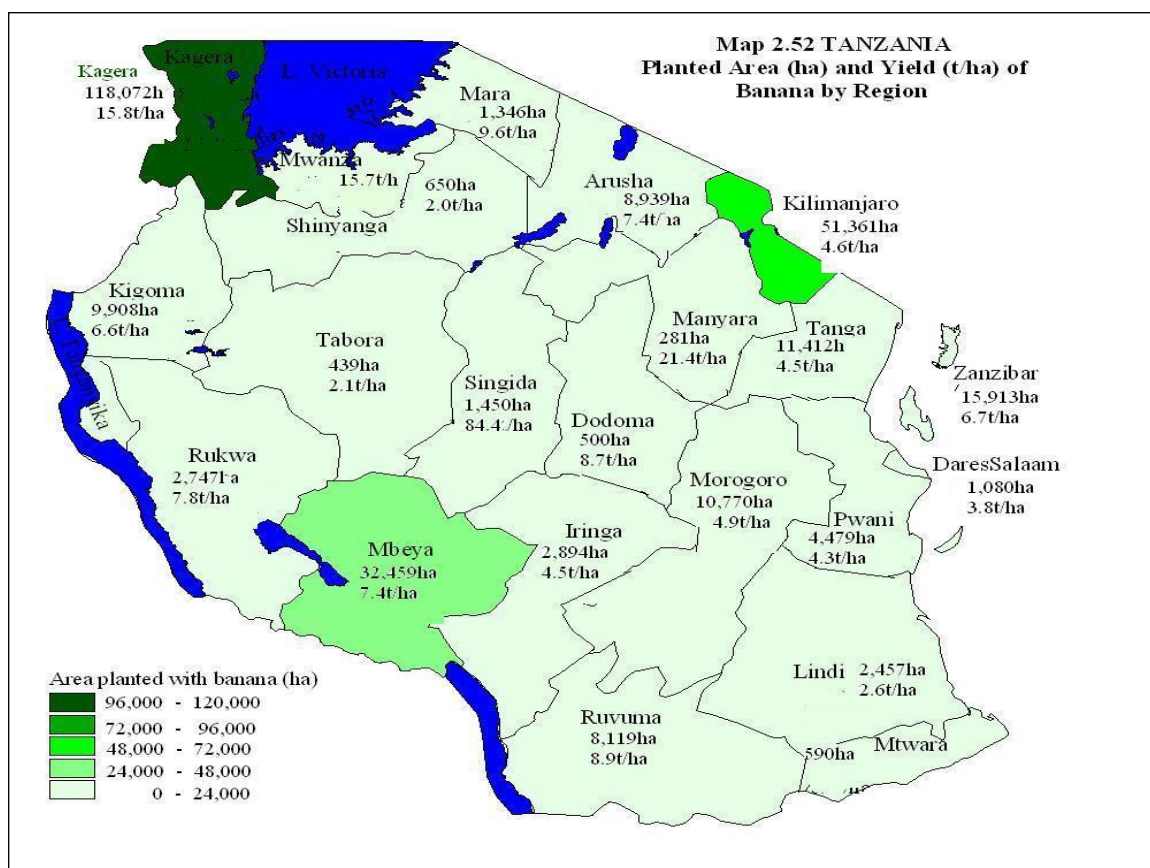

A total of 878,824 households engaged in banana production over a total area of 273,583 ha. In the Mainland, the total area planted (Chart 2.55 and Map 2.52) was largest in Kagera (41% of total area planted with banana), followed by Kilimanjaro (18%), and Mbeya (11%). All other production regions accounted for less than 30% of the total planted area.

Yields were highly variable between regions (Map 2.52). The highest yield was in the Mainland in Manyara region (21 t/ha), closely followed by Kagera and Mwanza both regions with (16 t/ha). In other production areas in the Mainland, yields were between 6.6 and 10.5 t/ha in Kigoma, Ruvuma, Mbeya, Arusha, Mara, Rukwa and Dodoma. In Zanzibar, banana yields were an average 5.7 t/ha which was slightly more than three times the lowest yield of 2 t/ha which was recorded in Tabora region in the Mainland.

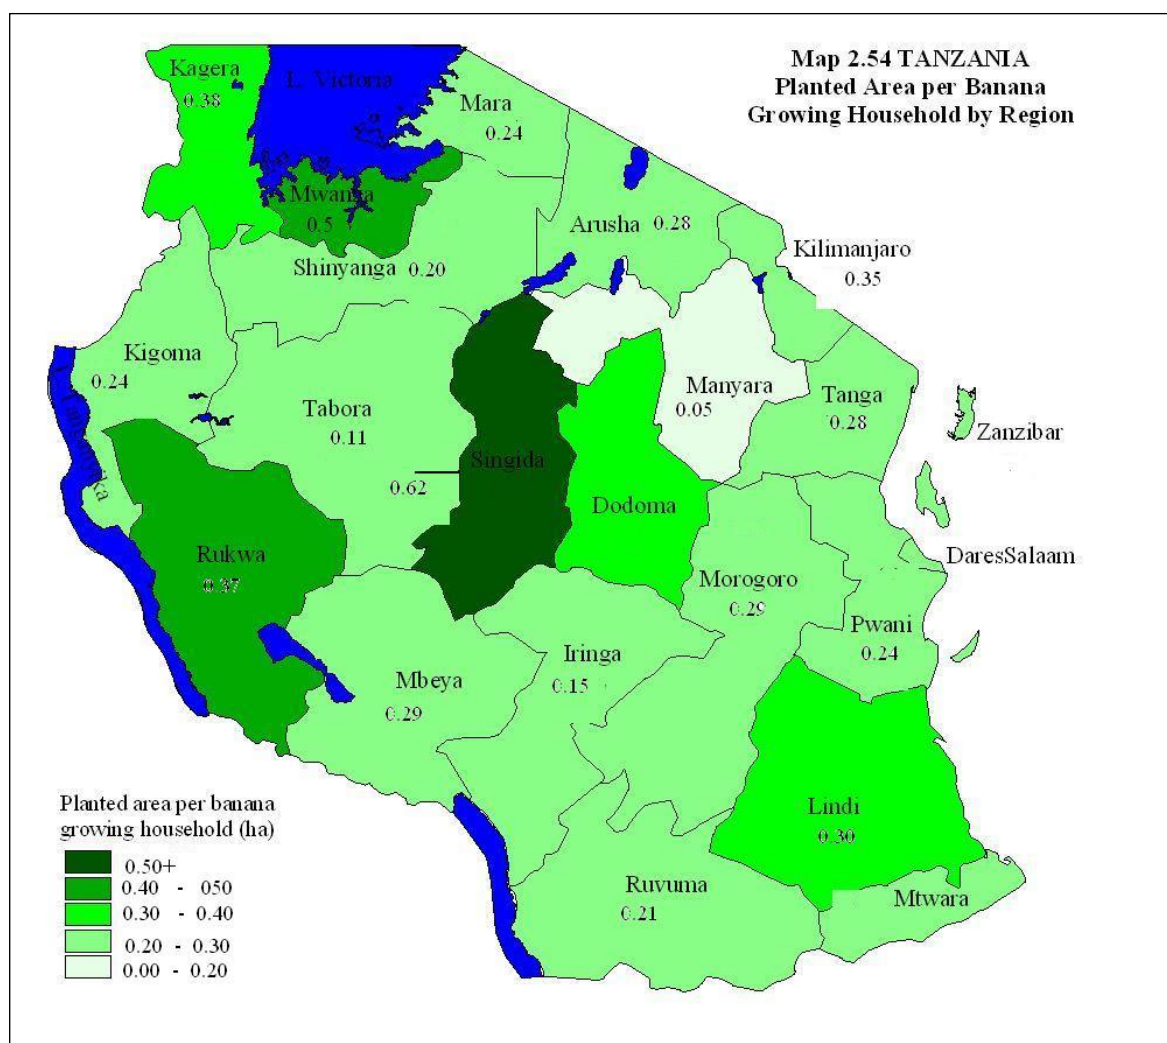

Based on percent of regional land planted with banana as a percent of the total planted area in the region, Kilimanjaro and Kagera regions were leading with 23% and 21% respectively followed by Zanzibar with 13%. Other production regions followed with a large margin difference as was the case for Mbeya (4%), Kigoma, Arusha and Dar es Salaam both with (3%) and Tanga, Ruvuma and Morogoro with 2%. The lowest percentages of regional land planted with banana were in TShinyanga and Dodoma, Tabora and Manyara both with less than 0.05% 0.1% (Map 2.53).

Planted area per household was small in all cases less than a hectare (Map 2.52). The largest planted area per household was in Singida region (0.6 ha/household) followed by 0.3 ha/household in Rukwa and Kagera, rukwa and Kilimanjaro both recording about than 0.4 ha/household. The smallest planted areas under banana were in Manyara (0.1 ha/household).

### 2.6.5 Coffee

Coffee was produced in households in 12 out of 21 regions in the Mainland and in Zanzibar. The

highest number of households growing coffee was found in Kagera (223,137) followed by Kilimanjaro (104,061), and Mbeya (79,175).

Coffee was also grown by a substantial number of households in Ruvuma (37,005), Arusha

(15,736) as well as Kigoma (11,035). Based on percent area planted with coffee the leading regions are Mbeya, Kagera, Kilimanjaro and Ruvuma. Zanzibar contribution is minimal. (Chart 2.56 and Map 2.56). The average planted area was less than a hectare. Among the traditional coffee growing regions, the largest planted area was 0.8 ha/household in Mbeya and the smallest in Mwanza region (0.04 ha/household) in (Map 2.57).

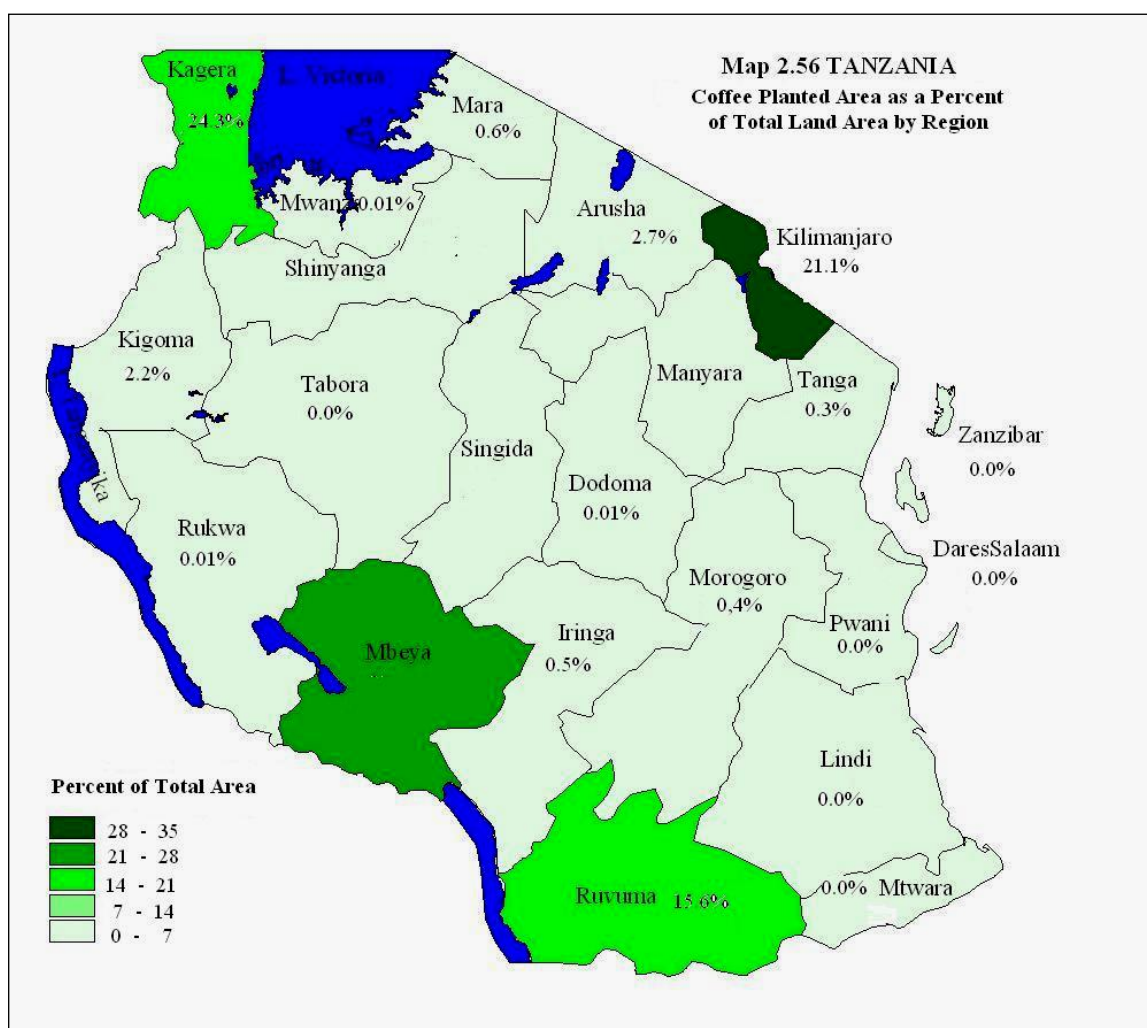

### 2.6.6 Mango

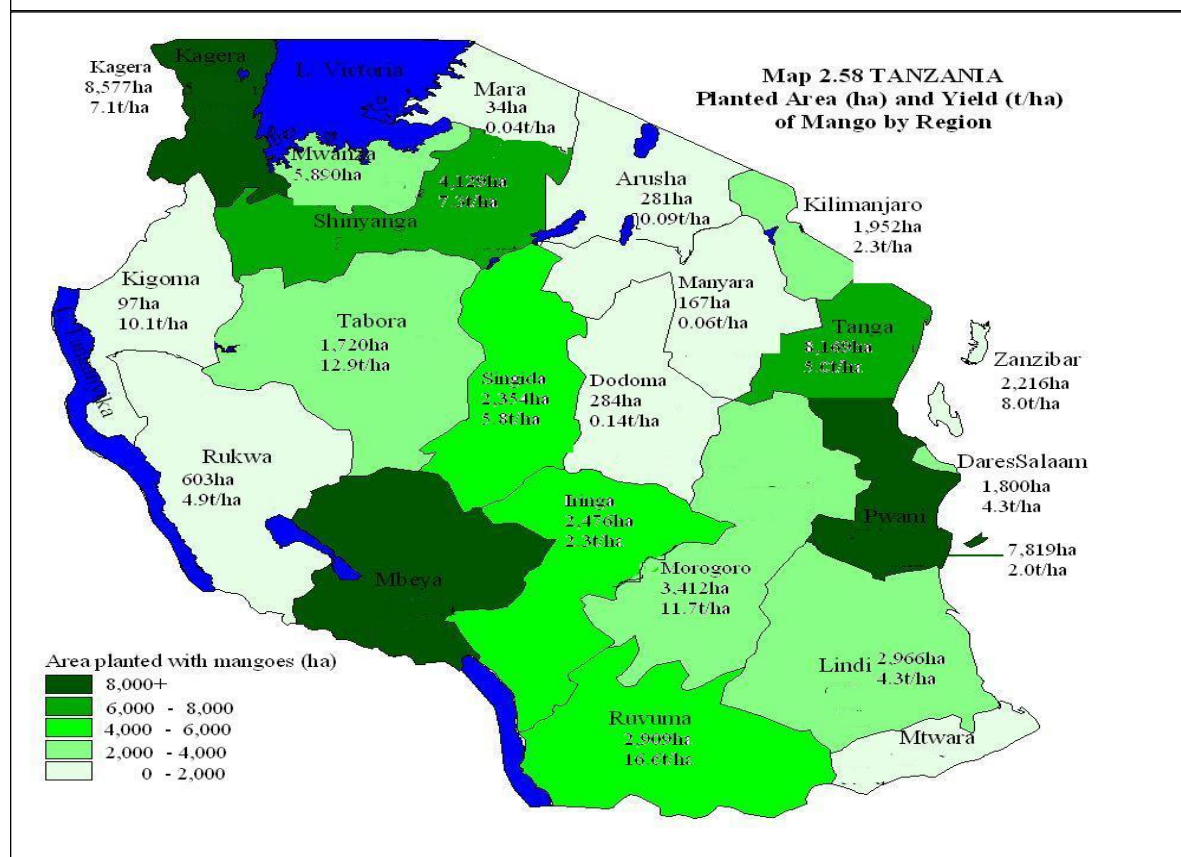

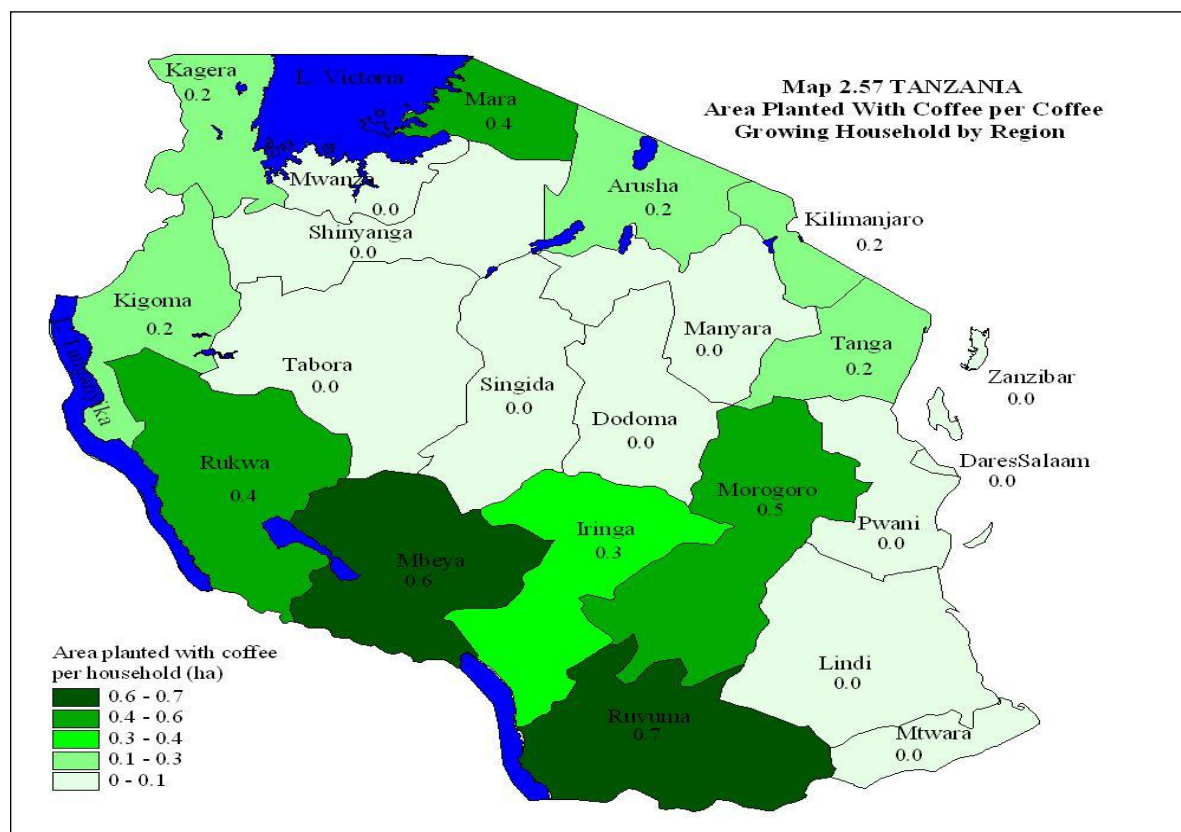

Mangoes are produced by smallholders in almost every region in Tanzania. A total of 286,365 households produced mangoes in a total area of 64,332 ha. The highest number of households involved in mango production were found in Kagera

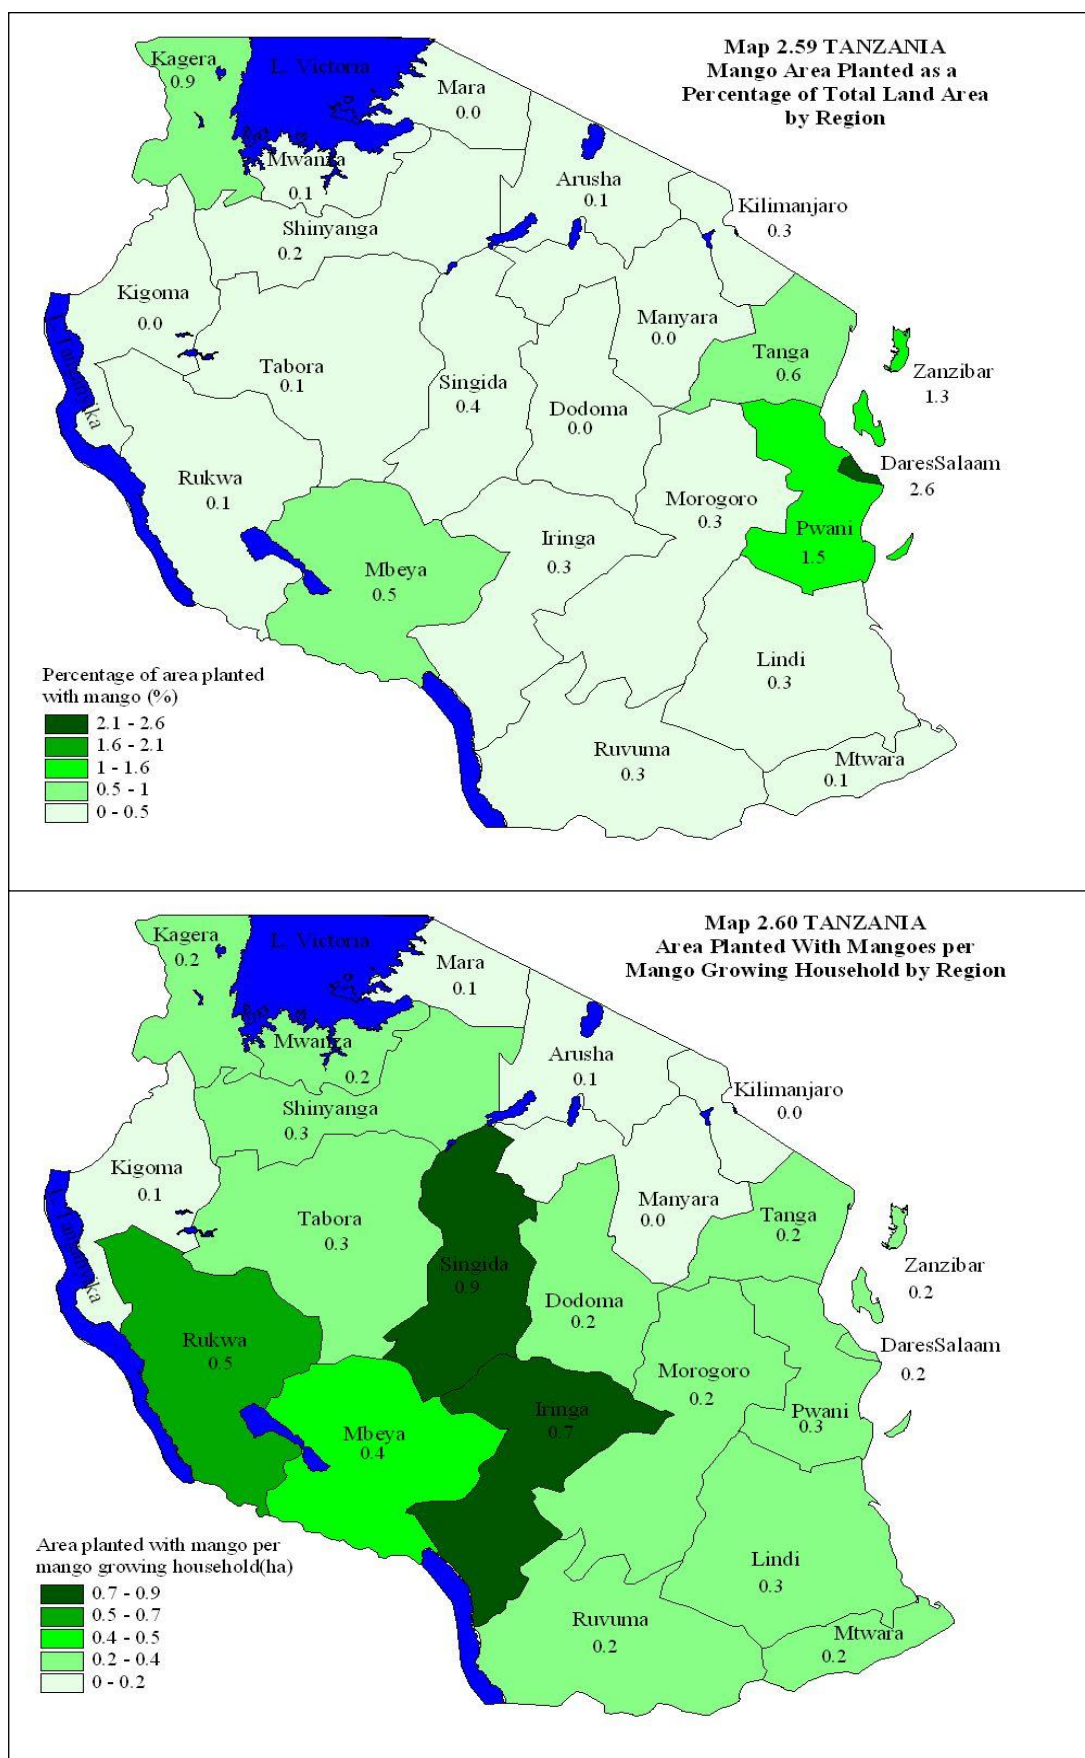

(71,304), Mwanza (41,459), and Morogoro (22,859) and Pwani (19,264). In terms of planted area and proportion of area under mangoes (Chart 2.57 and Maps 2.58 and 2.59), the leading regions were Tanga (8,577 ha, 13%, Kagera (8,169 ha, 13%), and Pwani (8,819 ha, 12%). All other regions in the Mainland and Zanzibar each accounted for less than 10% the planted area which was lowest in Manyara region (0.01%).

Planted area per household were generally small in most cases below 0.5 ha/household except in Dar es Salaam (2.6 ha/household) in the Mainland and in Zanzibar (1.3 ha/household). The smallest planted area per household (0.1 ha) were in Rukwa, mbeya, Arusha, mtwara and Tabora (Map 2.60).

### 2.6.7 Pigeon peas

A total of 112,362 ha were grown to pigeon peas by a total of 209,299 households (Chart 2.59). The crop was mostly grown in Manyara (Maps 2.61 and 2.62) region which had the largest planted area (38,404 ha, 34% of the total area planted with

pigeon peas) followed by Ruvuma (16,685, 15%), Lindi (15,862, 14%) and Dodoma (13,156 ha, 11%). Similarly, the highest number of households involved in pigeon pea production were 46,171 in Manyara, followed by 40,405 in Lindi, and 25,913 in Mtwara.

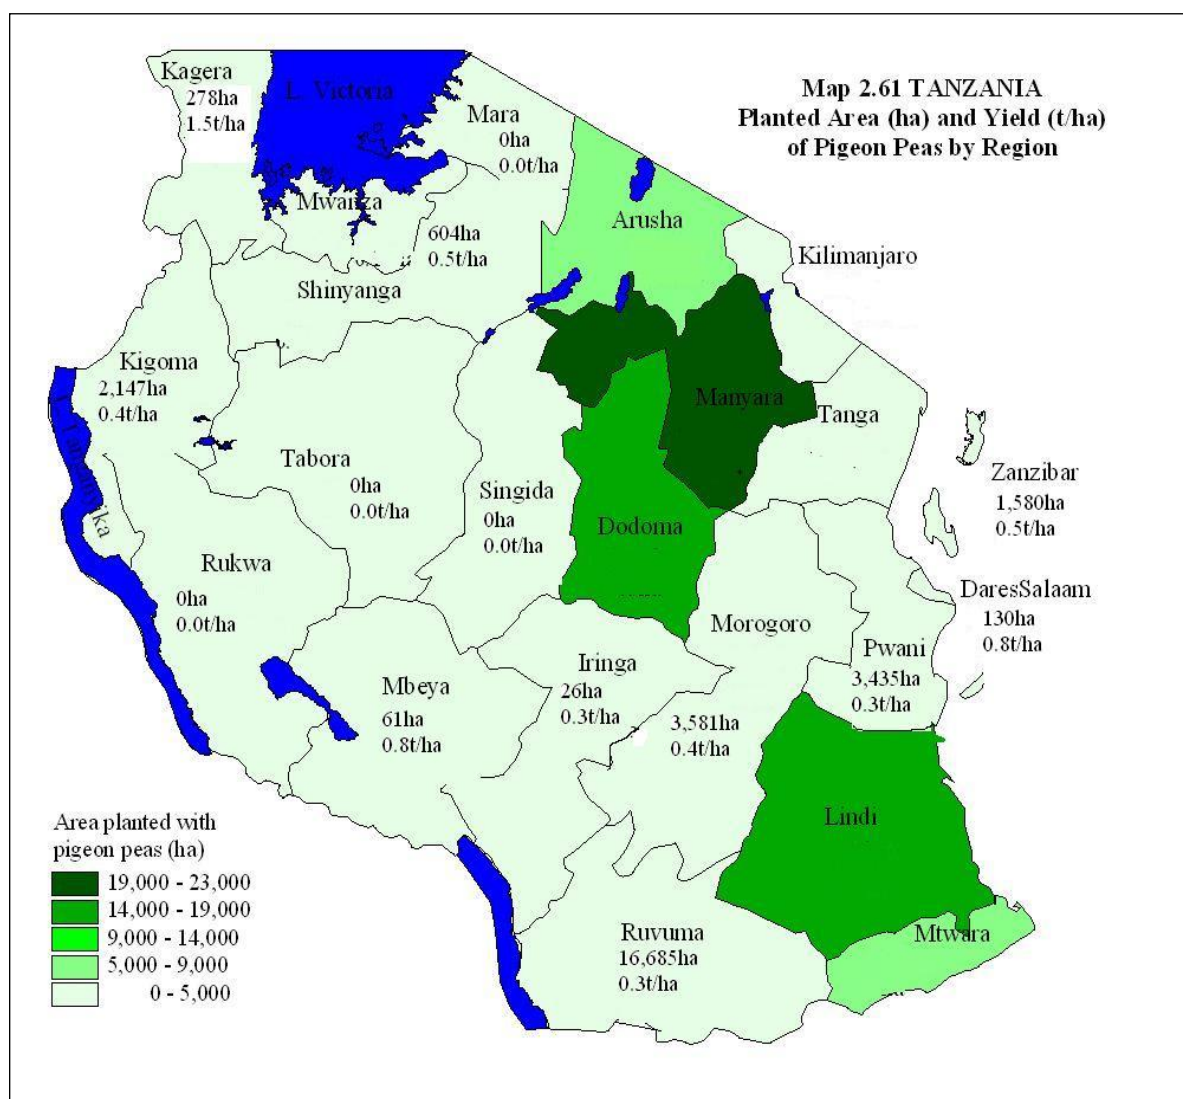

Kagera was the only region with yields just slightly above a ton (1 t/ha) while in all other regions in the Mainland and Zanzibar, pigeon pea productivity (Map 2.63) was consistently less than 1 ton/ha and was lowest in Mwanza (0.1 t/ha). On the other hand, no pigeon peas were grown in Singida, Tabora, Rukwa, and Mara regions

### 2.6.8 Coconuts

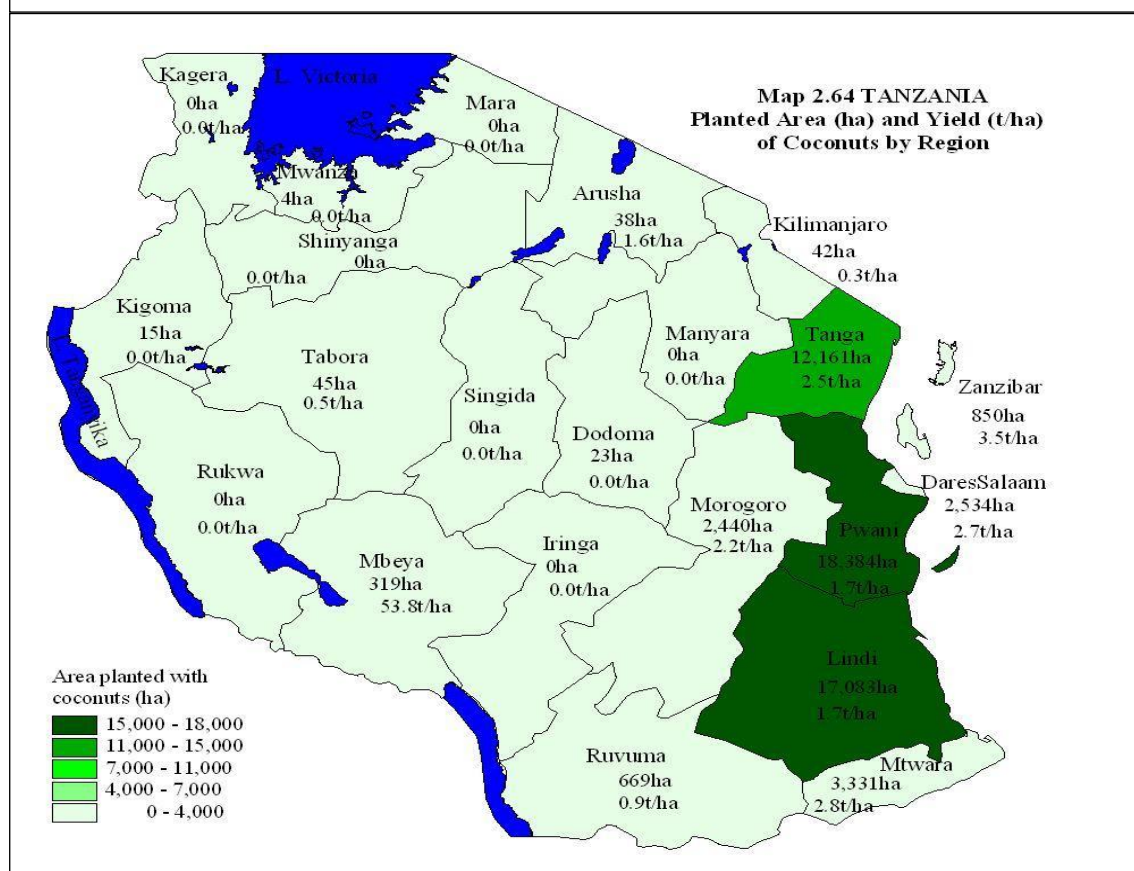

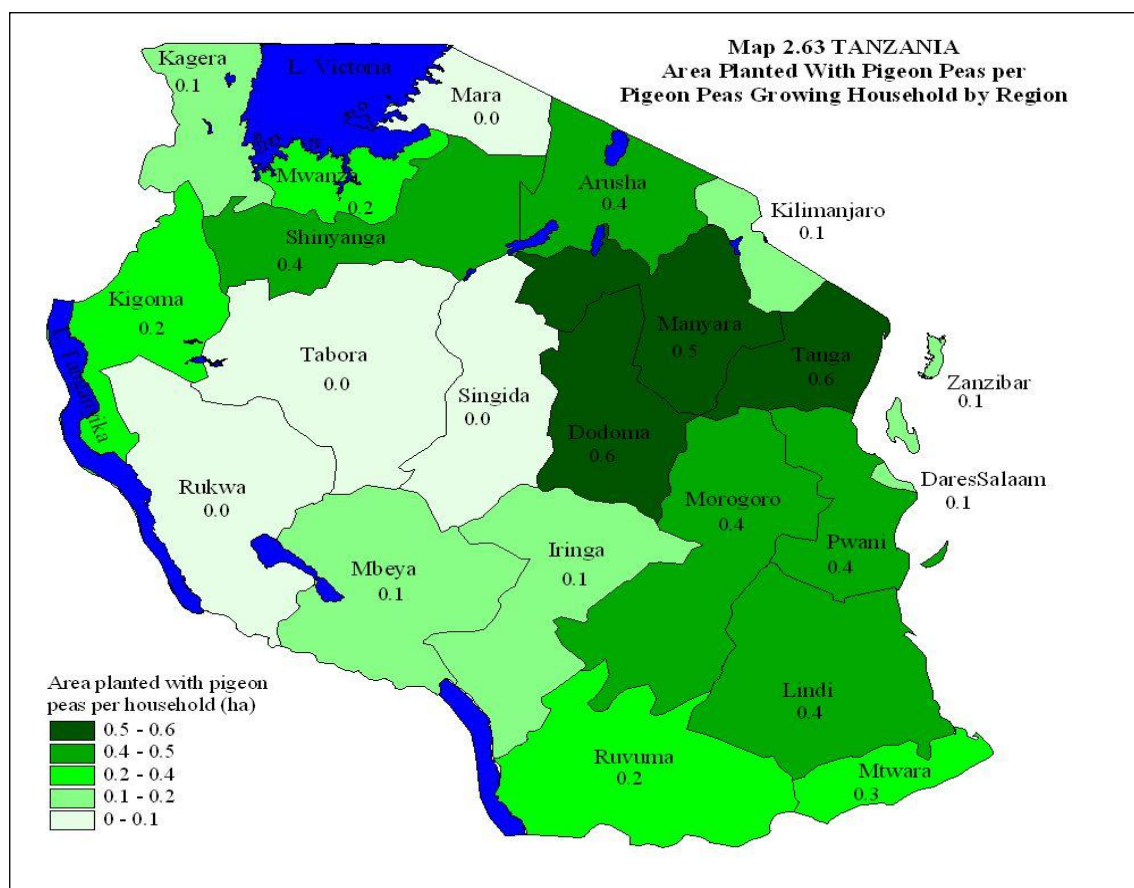

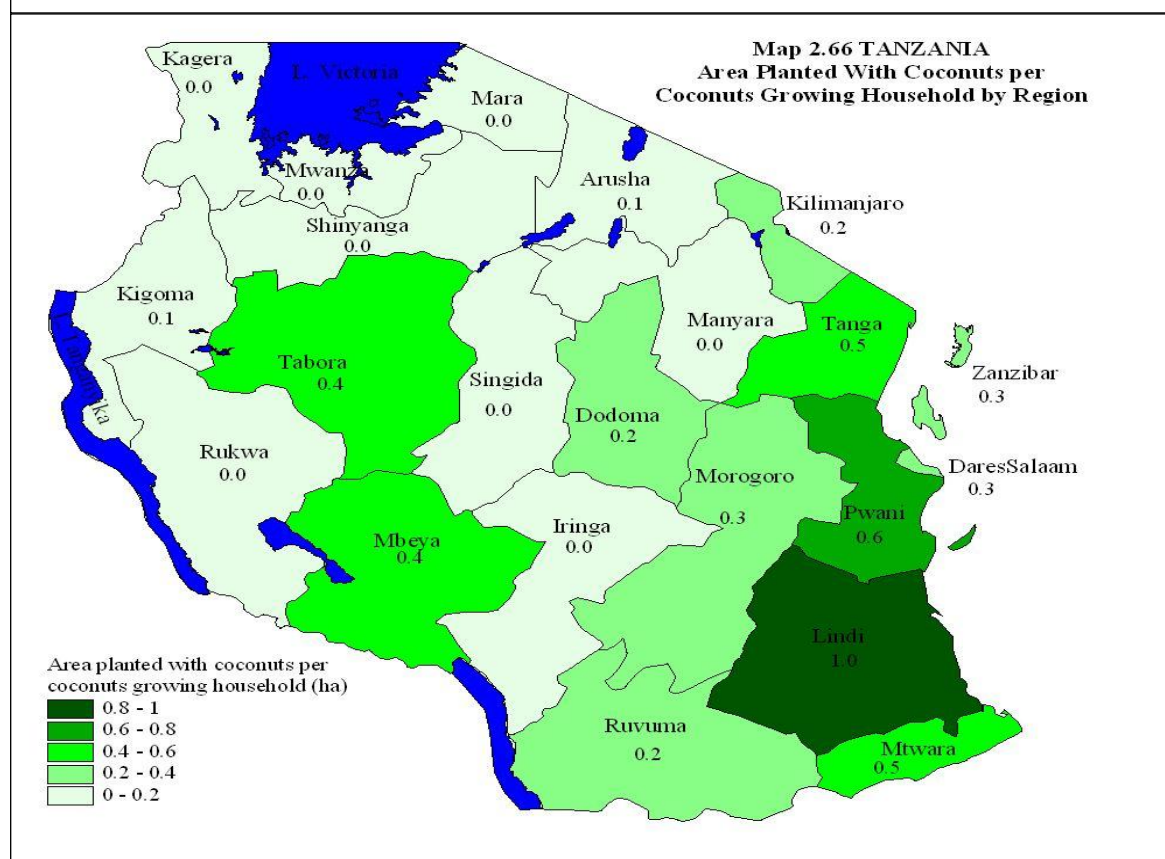

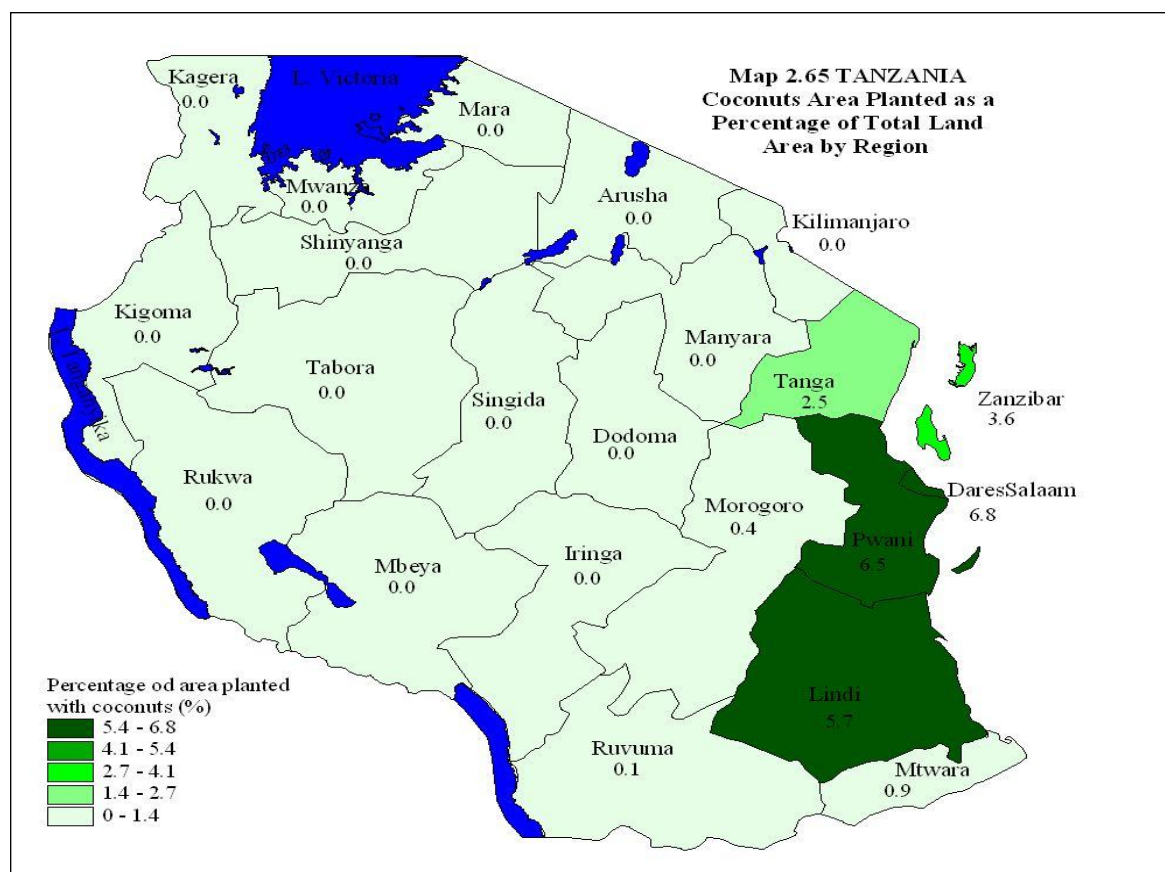

Coconut production is mainly along the coast on the eastern of the country with Pwani having the largest area and highest proportion of the area planted with coconuts (38,707 households, 36% of the total area planted with coconut) followed closely by Tanga

(28,085 households, 23%), and Lindi (19,519 ha, 20%) (Chart 2.60 and Maps 2.64 and 2.65). In the main coconut production areas, yields were 1.94 t/ha in Zanzibar; between 2.2 and 2.8 t/ha in Morogoro, Tanga, Dar es Salaam and Mtwara regions and declined to the lowest level (0.3 t/ha) in Tabora region (Map 2.64). Planted area per household (Map 2.66) was as small as 0.1 ha/household in Kigoma and Arusha to the highest level in Mbeya (3 ha/household).

### 3.7.9 Oranges

The total area planted with oranges was 67,950 ha and the crop was grown by 175,460 households. In general, orange production in the country is largely concentrated in the North East Coast of Mainland Tanzania (Chart 2.61 and Map 2.67) with Tanga having 52% of total planted area equivalent to 35,640 ha followed by Pwani with 16% or 11,123 ha.

In other production areas, planted areas were much smaller whereby Morogoro (4,582 ha, 7%), and Dar es Salaam (2,075 ha, 3%) were the other production regions with relatively large areas under orange production (Chart 2.61 and Map 2.67). Planted areas were much smaller in all other regions with Kigoma 66ha (0.01% of total planted area) recording the smallest planted area.

Planted area per household was generally smaller than a hectare in the Mainland and was 1.12 ha in Tanga, 2.85 ha in Singida. Other region had Planted Area per household less than on hectare (Map 2.69).

### 2.6.10 Sugar cane

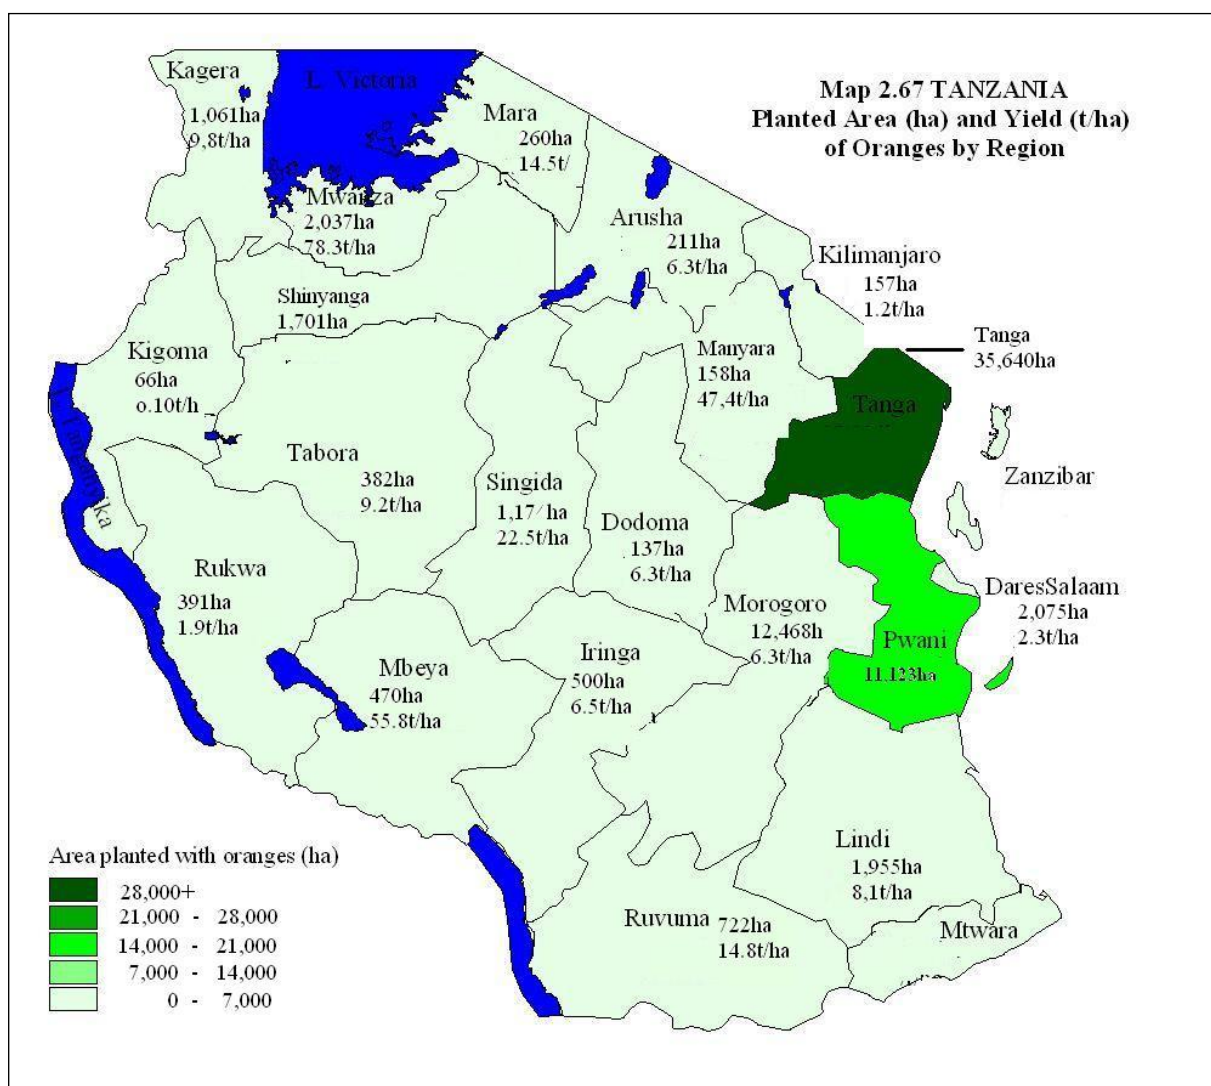

Sugar cane was grown by 64,362 households over a total area of 225,436 ha. The crop was largely produced in Morogoro, with a planted area of 12,215 ha or 48 percent of the total area grown to sugar cane. This was followed by Ruvuma and Tanga, each having 1,750

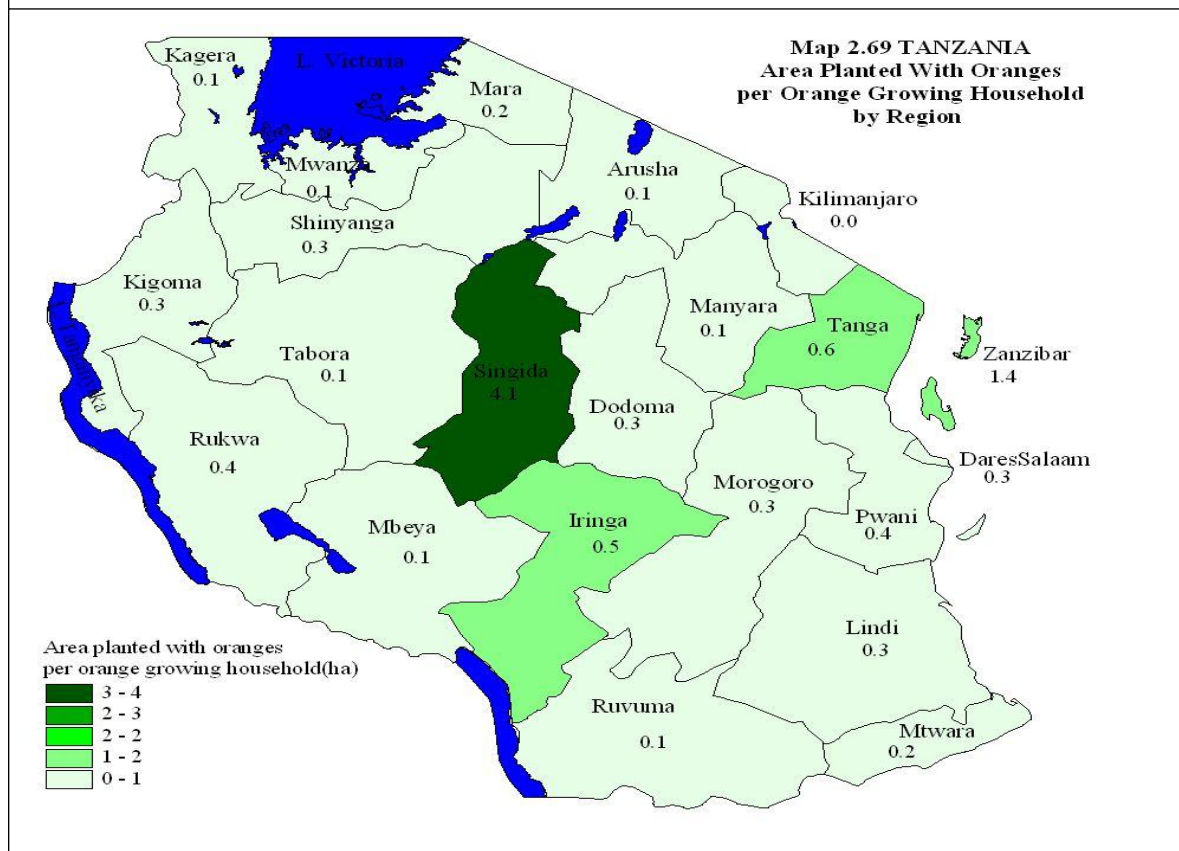

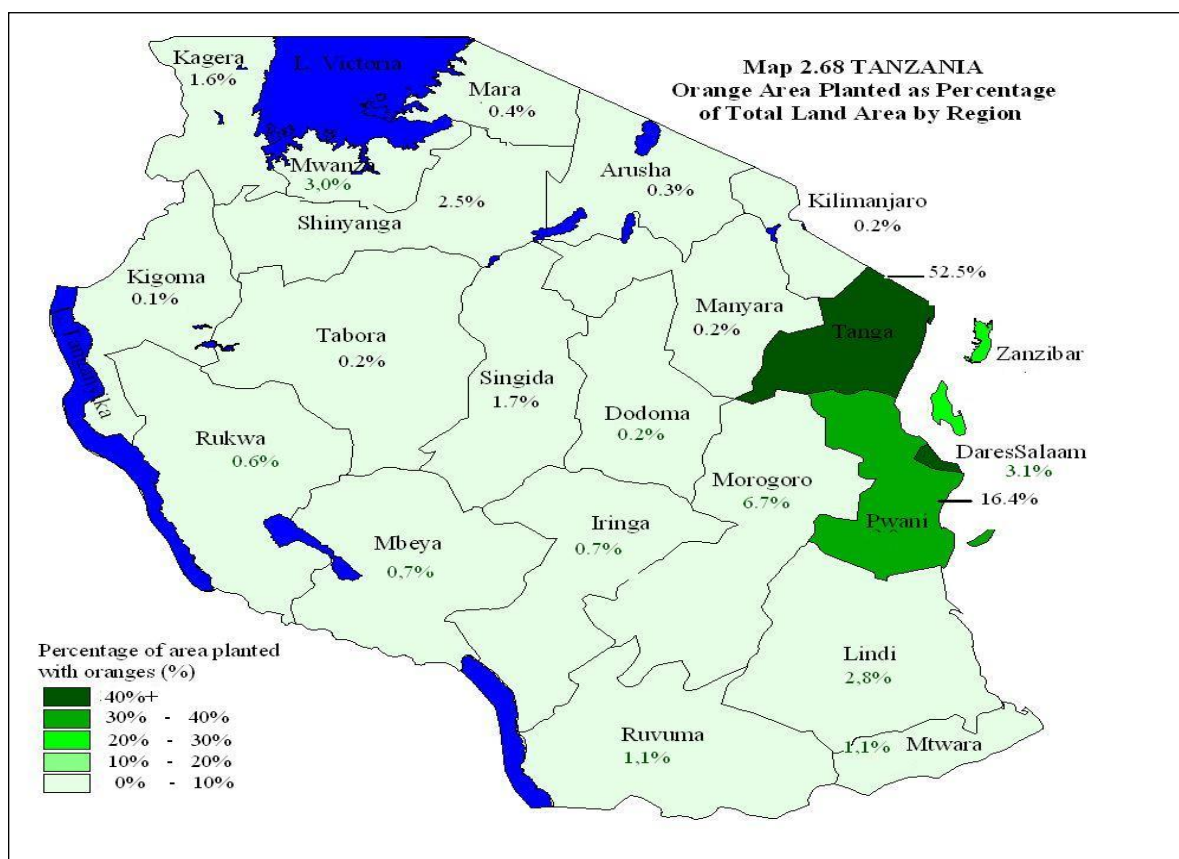

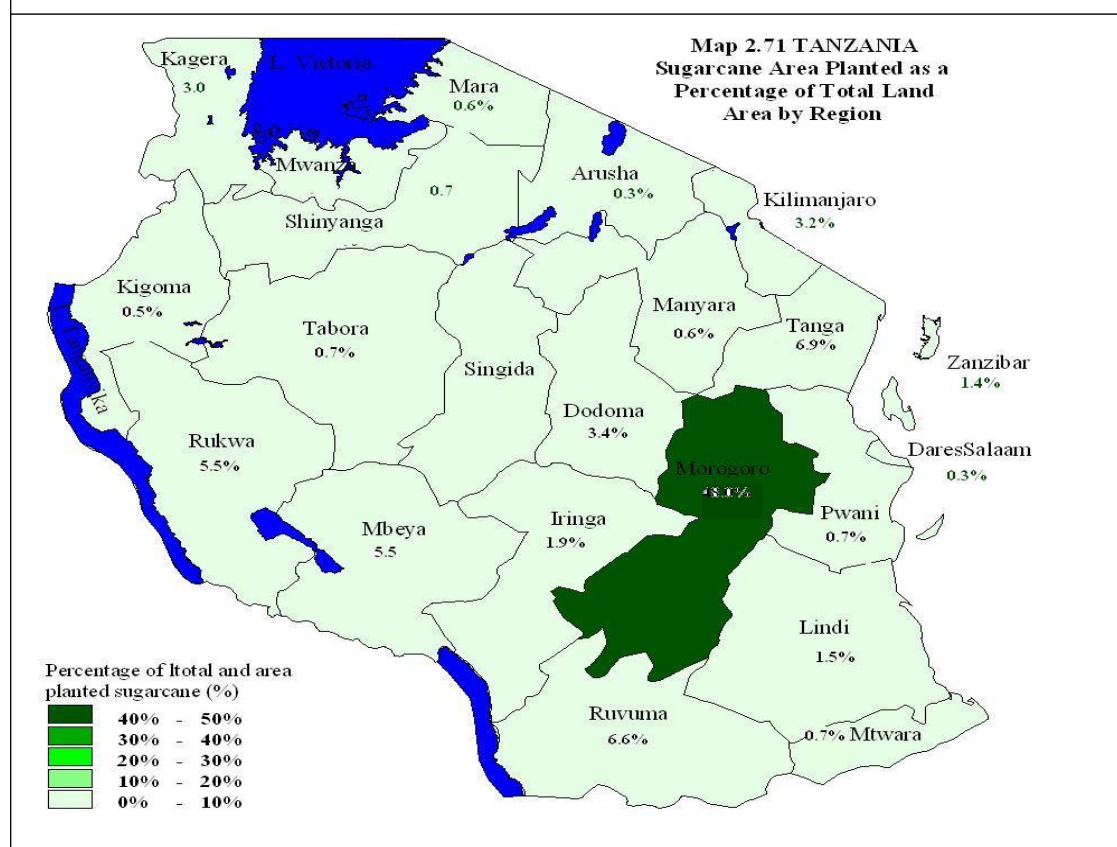

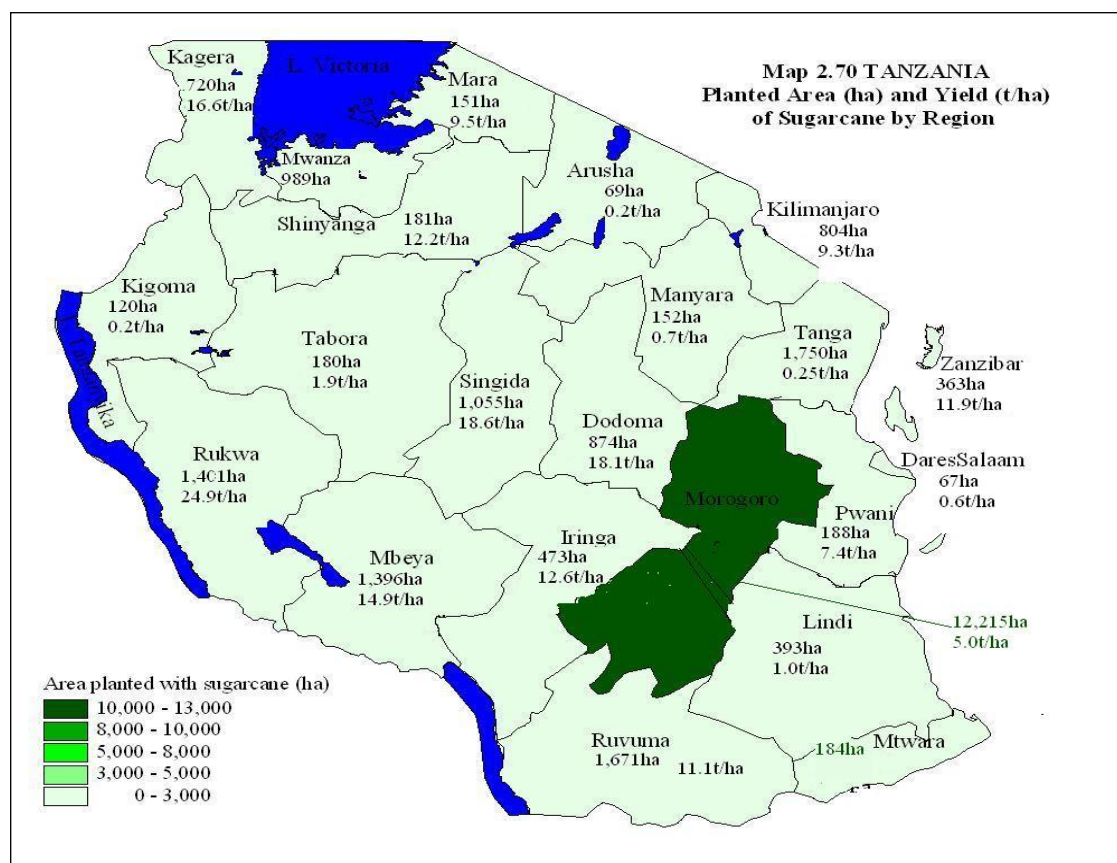

ha (7%) grown to sugar cane, respectively (Chart 2.62 and Map 2.70).

Sugarcane yields in the major growing regions were 5 t/ha in Morogoro, 11 t/ha in Ruvuma and 11.8 t/ha in Tanga (Map 2.70). However, much higher yields were recorded in the minor growing regions such as Singida (19 t/ha), Rukwa (25 t/ha), Kagera (17 t/ha) and Mbeya (15 t/ha).

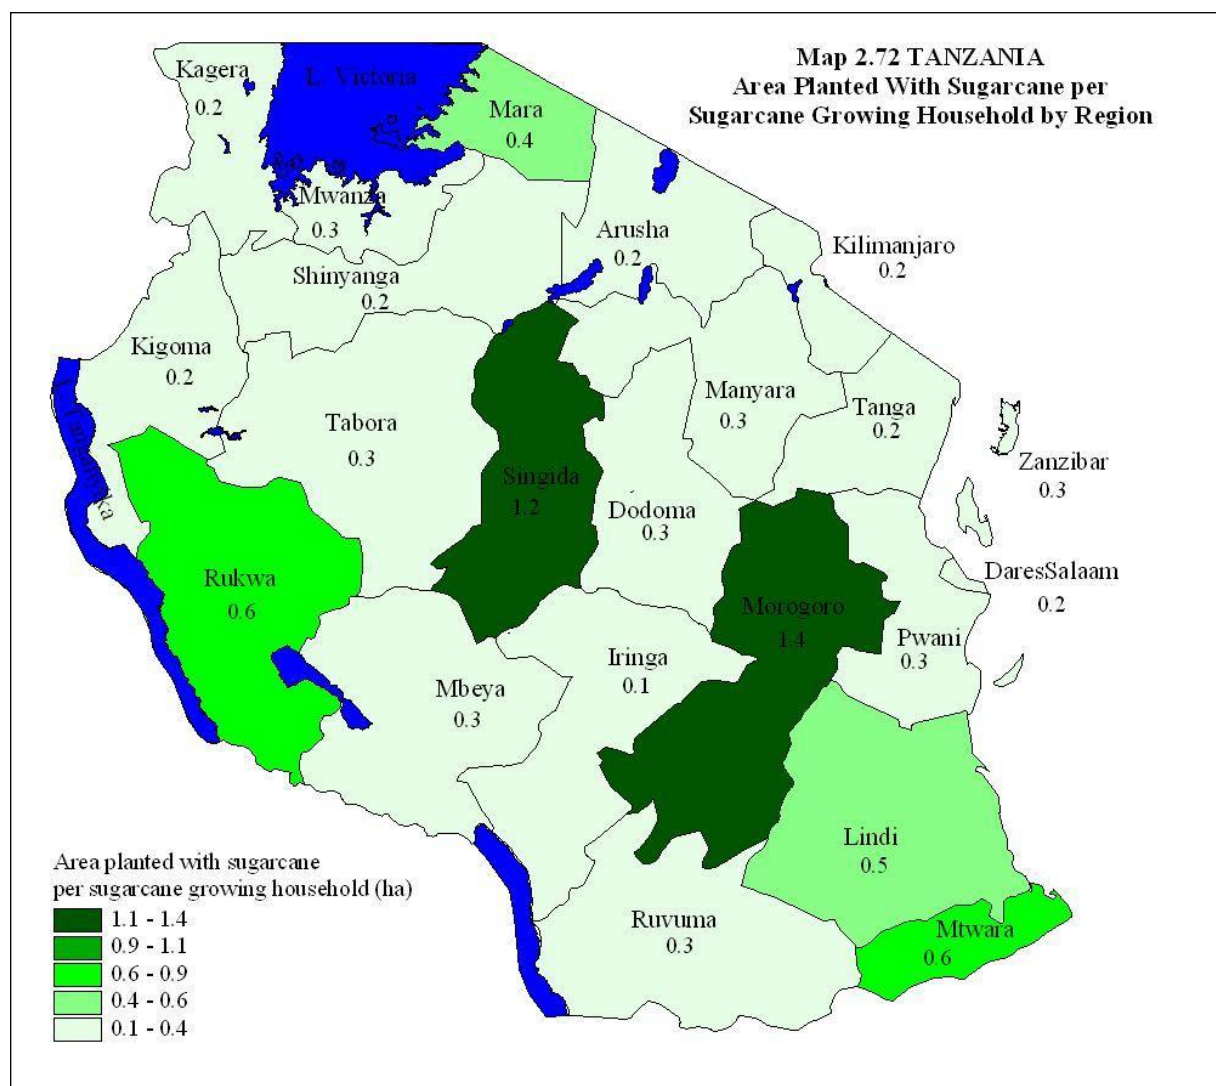

Planted area per household was generally lower than 1 ha with only Morogoro region recoding the highest which was (1.4 ha). In other regions in the Mainland, households planted an average 0.6 ha in each of Rukwa and Mtwara regions and 0.5 ha in Lindi region. In all other growing regions in the Mainland and in Zanzibar, individual households planted areas less than half a hectare (Map 2.72).

### 2.6.11 Oil Palm

Oil palm was mainly grown by 15,944 households on a total of 10,545 ha in Kigoma region which

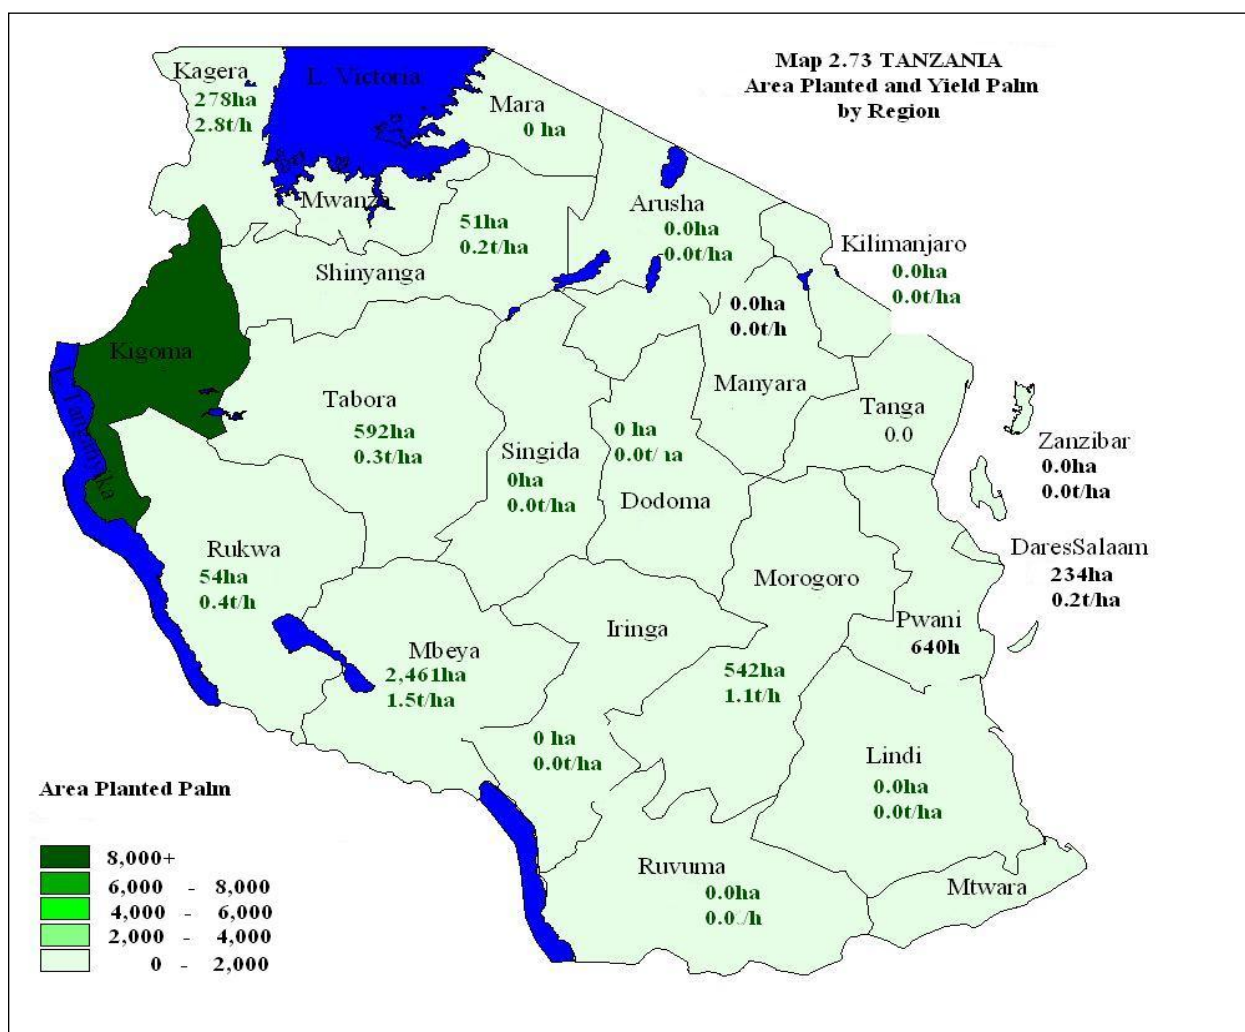

was the single most important region for oil palm production in the country recording about 80.4% of total area planted with oil palm in the country. The planted area in Kigoma was almost five times the area

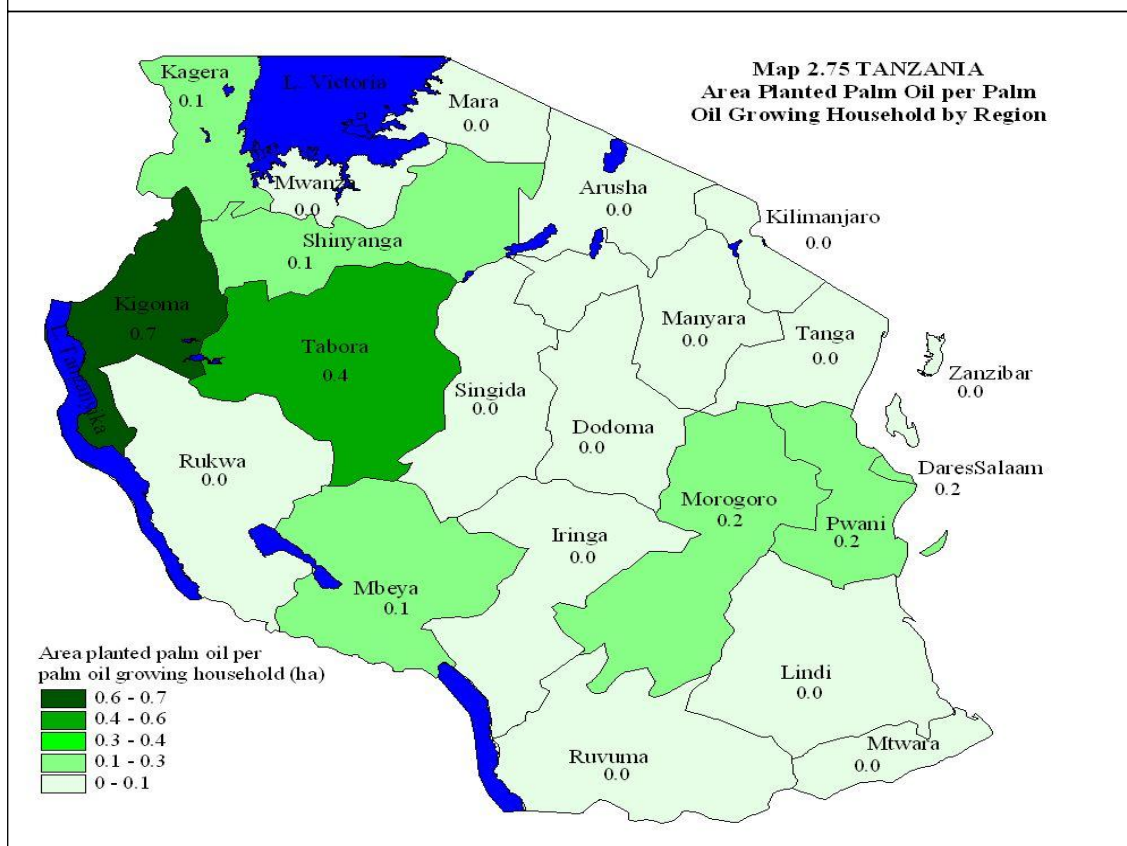

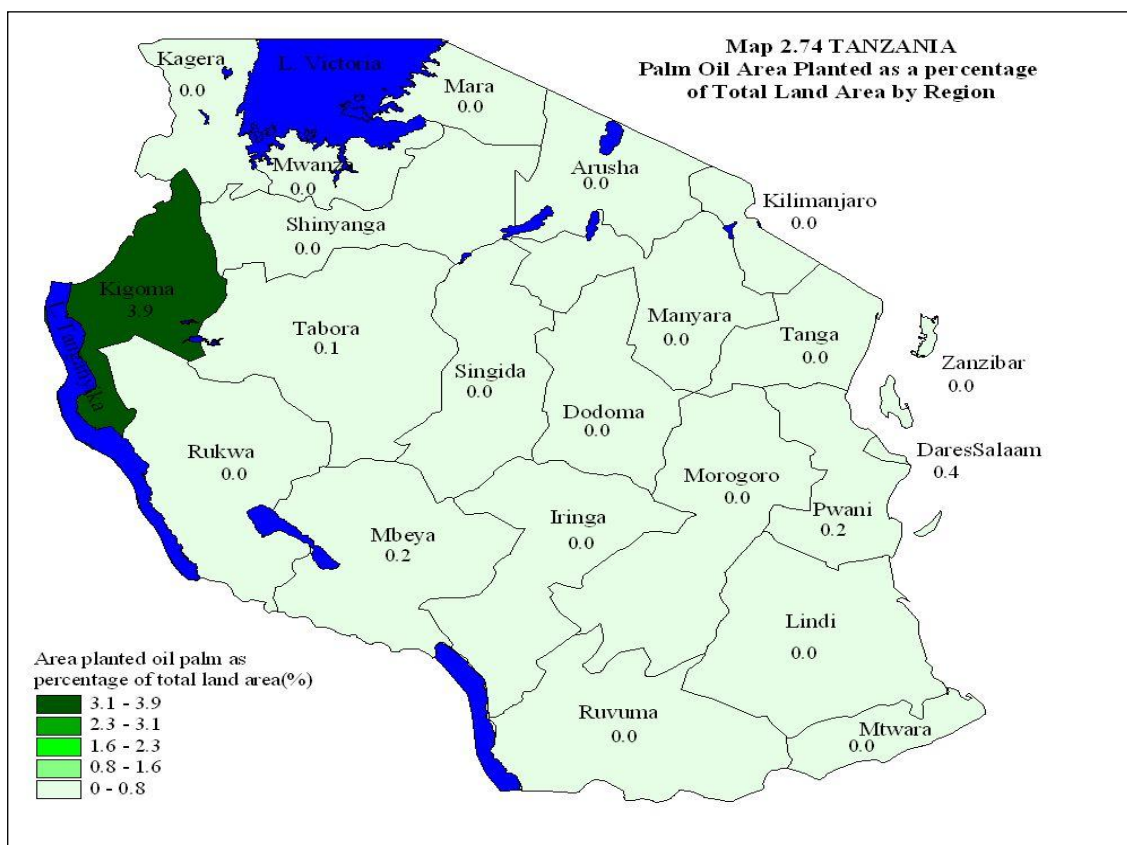

under oil palm in Mbeya region, the second most important region for oil palm production in the country. In this region, a total of 1,004 ha (8.3%) was grown to oil palm by 22,070 households. Production of oil palm in other regions such as Tabora, Pwani, Morogoro, Dar es Salaam, Kagera and Shinyanga was at a relatively much lower level and generally insignificant. Production was not recorded in 14 regions in the Mainland and in Zanzibar (Chart 2.63 and Map 2.73).

Oil palm yields in the major growing regions were 0.6 t/ha in Kigoma and 3.69 t/ha in Mbeya (Map 2.73). However, much higher yields were recorded in the minor production regions particularly in Kagera (9.4 t/ha), Mwanza (5.75 t/ha), Shinyanga (2 t/ha), Morogoro (2.68 t/ha) and Pwani (1.59 t/ha). Oil palm yields were lowest in Dar es Salaam region (0.27 t/ha).

Planted area per household (Map 2.75) was generally below one hectare and was highest in Kigoma region (0.66 ha) followed by Tabora (0.3 ha). In other regions in the Mainland, households planted an average 0.2 ha in each of Dar es Salaam, Pwani and Morogoro. The smallest plots were planted in Kagera and Mwanza, at 0.03 and 0.02 ha/household respectively.

## 2.7 Irrigation

Water is an important limiting factor to crop production in large parts of Tanzania. This section deals with irrigation for different crops and the means by which water is extracted from the source and applied to the field.

### 2.7.1 Area Planted with Annual Crops under Irrigation

Irrigated crop production was carried out during both short and long rain seasons in both Zanzibar and the Mainland. The national total planted area under irrigation, for the two seasons was 280,596 ha (3% of the total planted area) of which 277,820 ha (99% of the total irrigated area) was in the Mainland (Chart 2.64 and Map 2.76).

Considering Zanzibar alone, however, the total 2,777 ha irrigated in the two seasons represented an average of 5.3% of the total planted area in the islands, which was a slight improvement over the Mainland. In the Mainland, irrigated crop production was carried out mostly during the long rain season (194,699 ha, 70% of the total irrigated area in the Mainland) whereas in Zanzibar, irrigated crop production was carried out almost equally in both seasons (1,460 ha during the short rain season and 1,316 ha during the long rain season).

### 2.7.2 Number of households using irrigation

A total 441,974 households used irrigation of which 432,967 (98% of total number of households using irrigation) were in the Mainland and 9,007 (2%) in Zanzibar. The regions with the largest number of households using irrigation were Kilimanjaro (75,736, 17.1%) followed by Mbeya (47,568, 10.8%), Iringa (32,689, 7.4%) and Arusha (31,024, 7%). Other regions with households using irrigation exceeding 20,000 households were Morogoro (27,765, 6.3%), Tanga (24,912, 5.6%), Ruvuma (20,354, 4.6%), Tabora (25,601, 5.8%), Shinyanga (26,541, 6%) and Mwanza (25,216, 5.7%), (Map 2.78).

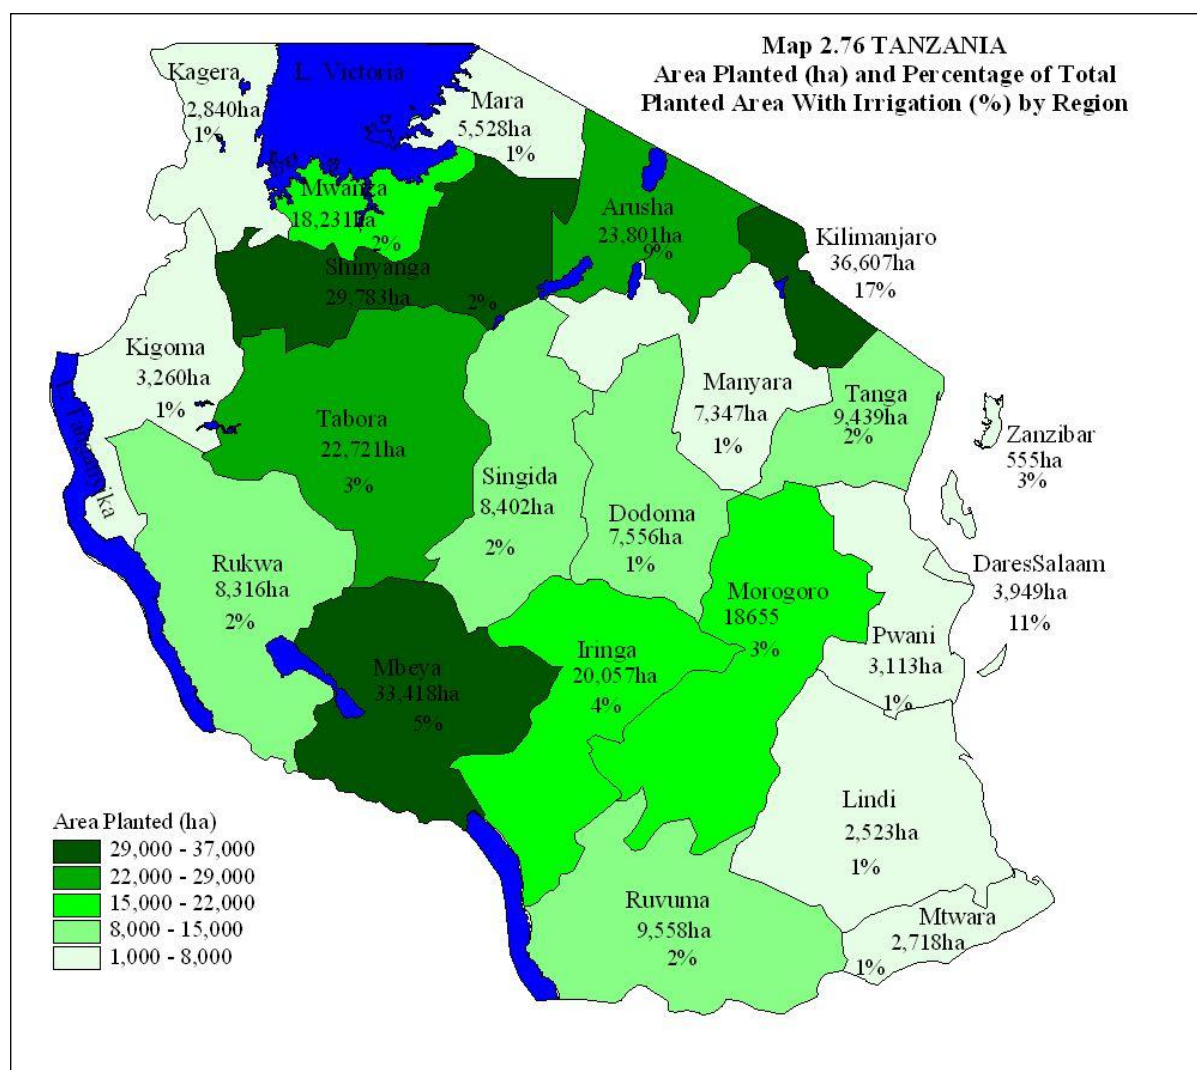

### 2.7.3 Planted area with Irrigation

The largest areas planted with irrigation (Chart 2.65) was in Mbeya region (33,418 ha, 14.3% of total irrigated land area), followed by Shinyanga (29,783 ha, 12.7%), Tabora (22,721 ha, 9.7%) and Iringa (20,057 ha, 8.6%). Other regions accounting for a minimum 5% of the irrigated planted area were Morogoro

(8%), and Mwanza (7.8%) Irrigation was least practiced in Mtwara (1.2%), Lindi (1.1%) and Dodoma (0.1).

In the areas where irrigation was applied, a considerable proportion of those who applied used either bucket and hand pump (Map 2.78) and others used the bucket or watering can (Map 2.79).

### 2.7.4 Source of Irrigation Water

The most common source of water for irrigation was the river which was used by an estimated 53% of the households that applied irrigation (Chart 2.66), followed by tap water (28%). Canals were used by an estimated 10% of households that applied irrigation while another 5% used water from lake. Boreholes, wells and dams were minor sources. There were regional differences in what constituted the main source of water, but generally, the river was the major source in most of the regions where irrigation was practiced, followed by tap water (Chart 2.67).

Most of the households practicing irrigation in Kilimanjaro, Mbeya, Iringa, Arusha, Ruvuma, Morogoro, Tanga, Rukwa, Manyara, Pwani, Kigoma and Lindi used rivers as the source of irrigation water (Chart 2.67). Tap water was mostly used in Kilimanjaro (22,696 households) and Mbeya (19,306 households). Canals were mostly used in Mwanza (4,853 households), other regions using canals as an important source of water were Tabora, Dodoma, and Shinyanga.

Dams were generally the least common source of irrigation water in Tanzania as they were used by only 2,974 households equivalent to 0.9% of total number of households applying irrigation. However, considering Zanzibar alone, dams were important sources of irrigation water in Zanzibar with a total of 645 households (21.7% of the total households that used dams) relying on this source. Wells were important in Manyara (1,143 households), Kilimanjaro (809 households), Zanzibar (606 households) and Arusha (596 households). The three regions relying on boreholes as a source of water for irrigation were Mwanza (1,698 households), Mara (977 households), and Kagera (611 households). Lakes and piped water were mostly used for irrigation in Shinyanga (5,333 households), Tabora (4,854 households), and Mwanza (2,224 households).

### 2.7.7 Use of Irrigation in Crop Production

The total area of irrigated land was 280,595 ha. Of this area, 191,949 ha representing 68.41% of the total irrigated area were planted with cereals. This was followed by fruits and vegetables (13.36%), and pulses (8.53%). On the other hand, the use of irrigation for the production of cash crops was limited to only 5.4% or 15,135 ha of the total area under irrigation. Irrigation of planted area with oil seeds and oil nuts and root and tubers were similarly small equivalent to 2.3% and 2.1% of the area planted with the respective crop

types (Chart 2.68).

In the irrigated area planted with cereals, the largest area was planted with maize (113,937 ha, 51%) followed by paddy (64,108 ha, 28%), beans (21,527 ha, 10%), and tomatoes (15,460 ha, 7%). The rest was planted with other crops including onions (2%), and cabbage (1%) (Chart 2.69).

#### **2.7.7.1 Cereals**

Generally, the largest number of households used irrigation (Table 2.11) for growing maize (200,421, 64.3%) followed by paddy (90,740, 29.1%). In addition, the largest area under irrigation was grown to maize (113,937 ha, 59.4% of total irrigated area under cereals) followed by paddy (64,108 ha, 29.1%). Regarding the number of households and area planted under irrigation during the short season, the largest number of households used irrigation for production of maize (72,088, 41.8%) and paddy (22,091, 12.8%). Similarly, the largest area was planted with maize (34,205 ha, 50.2%) followed by paddy (16,127 ha, 23.7%). Similarly, during the long season (Table 2.11) the largest number of households used irrigation for production of maize (128,333, 39.5%) followed by paddy (68,649, 21.1%) and the largest area under irrigation, for the short and long rain season combined, was planted with maize (79,732 ha, 50.7%) followed by paddy (47,980 ha, 30.5%).

#### **2.7.7.2 Roots and Tubers.**

Overall (Table 2.11), the largest number of households used irrigation for growing round potatoes (12,555, 55.5%) followed by sweet potatoes (7,247, 32%). Similarly, the largest area under irrigation was grown with round potatoes (3,268 ha, 56.8%) followed by sweet potatoes (1900 ha, 33%). Regarding use of irrigation and area under irrigation, during the short season the largest number of households used irrigation for production of round potatoes (5,739, 58%) and sweet potatoes (2,943, 29.7%). During this season (Table 2.11), the largest irrigated area was planted with round potatoes (1,177 ha, 52%) followed by sweet potatoes (781 ha, 34.5%). A similar pattern emerged during the long rains, as the largest number of households used irrigation to produce round potatoes (6,816, 53.5%) followed by sweet potatoes (4,304, 33.8%). During this season, the largest area was planted with round potatoes (2,091 ha, 59.9%) followed by sweet potatoes (1,119 ha, 32.1%).

### 2.7.7.3 Pulses

The most important pulses based on number of households involved and area under irrigation (Table 2.11) were beans (73,894 households, 85.6% on 21,527 ha, 90%) followed by cowpeas (5,751 households, 6.7%, on 872 ha, 3.6%). During the short season the largest number of households were involved in bean production (30,018, 84.2%) followed by cowpeas (3,059, 8.6%). These crops were cultivated under irrigation on 8,580 ha (91%) and 415 ha (4.4%), respectively. A similar pattern was evident during the long season (Table 2.11) whereby the largest number of households using irrigation produced beans (43,876) and cowpeas (2,692, 5.3%) on 12,947 ha (89.4%) and 457 ha (3.2%), respectively.

### 2.7.7.4 Oil seeds and oil nuts

Various oil seeds and nuts, including sunflower, simsim, groundnut, soya beans, and castor bean, were produced under irrigation during both the short season and long seasons (Table 2.11). The most important oil seeds and oil nuts planted under irrigation were groundnut (8,780 households, 53.4% on 2,631 ha, 41.4%), followed by sunflower (4,706 households on 2,318 ha, 36.5%) and simsim (2,319 households on 1,315 ha). During the short season (Table 2.11), the largest number of households irrigated sunflower (1,117, 35.3%) closely followed by groundnut (1089, 34.4%) on 311 ha (49.7%) and 157 ha, (25.1%), respectively. In the long season (Table 2.11), the largest number of households irrigated groundnut (7,691, 58%), followed by sunflower (3,589, 27%), and simsim (1872 households), the crops constituting 43.2%, 35% and 14.1% of the total irrigated planted area, respectively.

### 2.7.7.5 Fruits and Vegetables

Households produced a wide variety of fruits and vegetables using irrigation (Table 2.11). Of the total 213,510 households that were involved in the production of fruits and vegetables under irrigation, the largest proportion (79,122 households, 37.4%) was involved in the production of tomatoes, followed by cabbage (20,219, 9.5%) and onion (19,827, 9.3%). The total area planted with fruits and vegetable crops under irrigation (Table 2.11) was 37,481 ha of which the largest area was grown to tomatoes (15,460 ha, 41.2%) followed by onion (4,424 ha, 11.8%).

During the short rain season (Table 2.11), the largest number of households was engaged in production of tomatoes (28,881, 33.1%) followed by amaranthus (8,784, 10%) and cabbage (7,561,

8.7%). During this season, the largest area was planted with tomatoes (5,658 ha, 37.8%), followed by onion (1,331 ha, 8.9%) and water melon (1,085, 7.2%). In the long rain season (Table 2.11), the largest number of households irrigated tomatoes (50,890, 40.3%), followed by onion (13,598, 10.8%), cabbage (12,505, 10%) and spinach (12,505, 9.9%). The four crops individually occupied 9,801 ha (43.5% of the irrigated area in the season), 3,093 ha (13.7%), 1,742 ha (7.7%) and 1,542 ha (6.8%), respectively.

#### **2.7.7.6 Cash Crops**

The total area under annual cash crops production was 642,958 ha of which only 15,139 ha (2.4% of the area planted with annual cash crops) were irrigated (Table 2.11). During 2007/2008 Agriculture Census, annual cash crops produced under irrigation included cotton, tobacco, pyrethrum, and seaweed (Table 2.11). Of these, the largest irrigated total area was planted with cotton (10,668 ha, 70.5%) by 8,778 households (50.8%) followed by 4,292 ha (28.4%) planted with tobacco by 8,234 households 47.6%).

**Table 2.11: Area under irrigation during short and long rains by crop**

Crop	Short Rainy Season		Long Rainy Season		Total	
	Number of Households Using Irrigation	Planted Area Using Irrigation	Number of Households using Irrigation	Planted Area Using Irrigation	Number of Households using Irrigation	Planted Area Using Irrigation

### 2.7.8 Methods Used to Obtain Irrigation Water

Almost two thirds of the households involved in irrigation farming obtained water by gravity (Chart 2.70 and 2.71). Over 50 percent of households depended on gravity to obtain water for irrigation in Kilimanjaro, Mbeya, Iringa, Morogoro, Tanga, Rukwa, Singida, Manyara, Dodoma, and

Lindi (Table 2.12). Hand buckets were more important as a means of irrigation in Dar es Salaam,

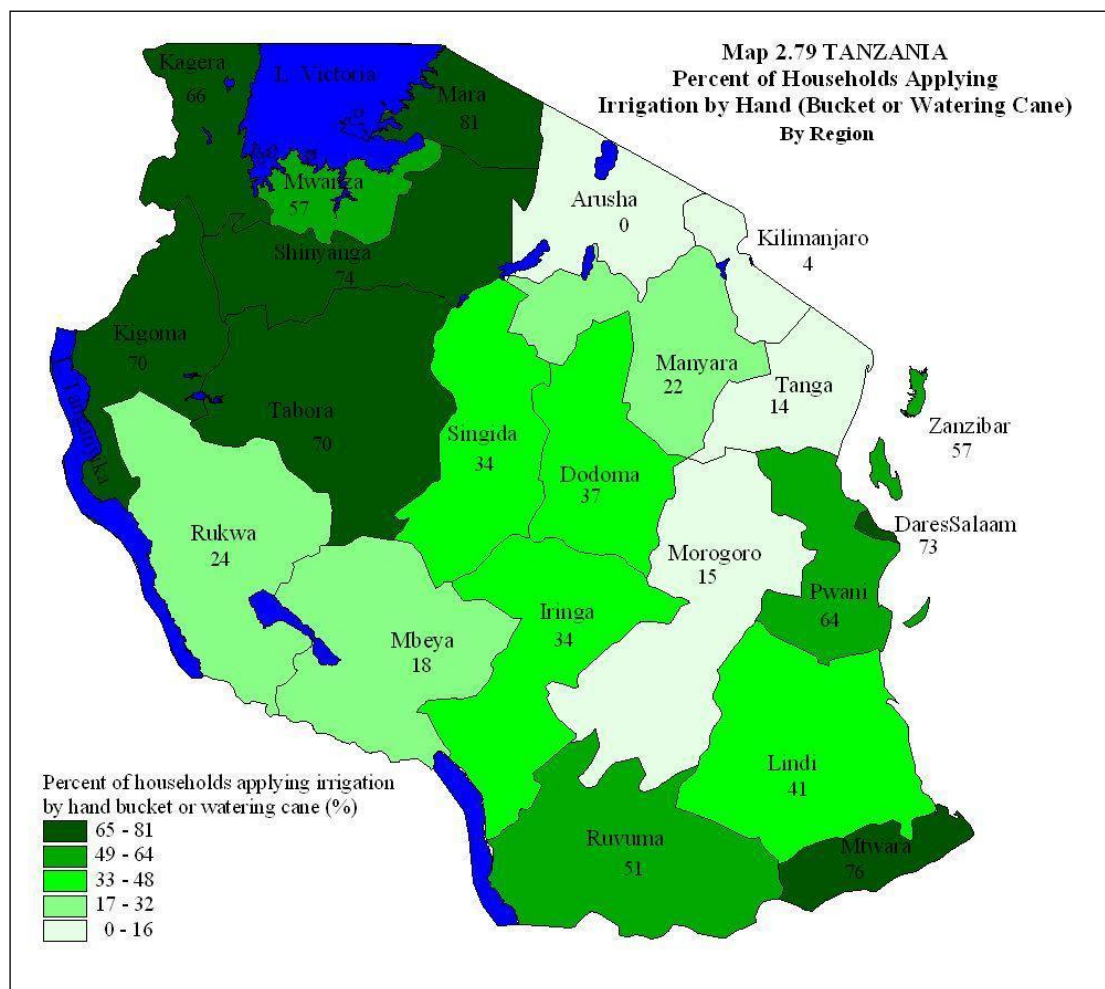

Mwanza, Mara, Ruvuma, Shinyanga, Tabora, Kagera, Kigoma, Zanzibar, Pwani and Mtwara (Maps 2.78 and 2.79). Other methods including hand pumps and motor pumps were used to a lesser extent. However, hand pumps were not used at all in Arusha, Tanga, Kigoma and Manyara regions (Table 2.12)

**Table 2.12 Number of Agricultural Households by Method to Obtain Irrigation Water by Region**

Region	Gravity	Hand bucket	Hand pump	motor pump	Other	Total
Kilimanjaro	50,680	2,054	743	660	686	54,823

## 2.8 USE OF INPUTS

### 2.8.1 Planted Area with Improved Seed

In Tanzania, the total area planted with improved seed during 2007/08 agricultural year was 1,488,893 hectares. This accounts for only 17 percent of the total planted area. On the other hand, the total area without improved seed is 7,319,878 representing 83 percent area of the total planted land (Chart 2. 72).

More land was planted with improved seeds in the long rains than during the short rains (Chart 2.73), except for Pwani, Kigoma, Kagera, Mwanza and Mara regions on the Mainland. Likewise, in Zanzibar, more area was planted using improved seeds during long rainy season than during short rainy season. Out of the total area planted with improved seeds, 1,907 hectares (49%) were planted during short rainy season, while 1,967 hectares (51%) were planted during long rainy season. South Uguja had the largest area (832 hectares 44%)

planted with improved seeds during short rainy saeson, while North Uguja had the largest area (910 hectares 46%) planted with improved seeds during long rainy season.

### 2.8.2 Percent Planted Area with Improved Seed by Crop Type

Results indicate that large crop areas planted with improved seeds during short and long rainy seasons include those planted with cereals (62%) and cash crops (23%). The area planted with other crops using improved seeds was rather small. The crops include fruits and vegetables (7.5%), pulses (5.4%), oil seeds and oil nuts (2%), and roots and tubers (1.0%) (Chart 2.74).

Generally, for all types of crops, the total area planted during long rainy season exceeded the area planted with improved seeds during short rainy season.

### 2.8.3 Fertilizer Application by Type of Fertilizer and Region

Results presented in this section are based on use and area of application of fertilizer and not on the quantity applied. In general, these results show that fertilizer is only used on a low proportion of the area under cultivation. Besides, the use of fertilizer greatly varies across regions. Organic fertilizer is widely used in Shinyanga (67,439 ha) followed by Singida (54,586 ha) and Tabora (53,339).

Other regions where over 30,000 ha were planted using organic fertilizer (Chart 2.75) are Dodoma (48,843 ha), Mwanza (43,681 ha), Manyara (32,275 ha) and Iringa (32,199 ha) (Map 2.84a). Furthermore, organic fertilizer was least used in Lindi (588 ha) and Mtwara (1,818 ha) (Map 2.82a). On the other hand, Mbeya region leads in the use of inorganic fertilizer (Map 2.84a) with a total of 131,208 ha, followed by Iringa (103,697 ha) and Ruvuma (83,208 ha)

However, the top three regions with the largest areas planted without using inorganic fertilizer (Map 2.82b) were Shinyanga (1,429,126 ha), Dodoma (746,650 ha), and Mwanza (660,675 ha).

In Zanzibar, the total of 1,836 hectares and 1,664 hectares were planted with organic fertilizer in South Unguja and North Unguja respectively. The least planted area with organic fertilizer in Zanzibar was in South Pemba 321 hectares (maps 2.82a and 2.84a). Likewise, planted area with inorganic fertilizer was mostly found in North Unguja and South Unguja, where a total of 1,222 hectares were planted in North Unguja, and 802 hectares were planted in South Unguja. The least area planted with inorganic fertilizer was in North Pemba with 405 hectares (Maps 2.82b and 2.84b).

#### 2.8.4 Use of Pesticides

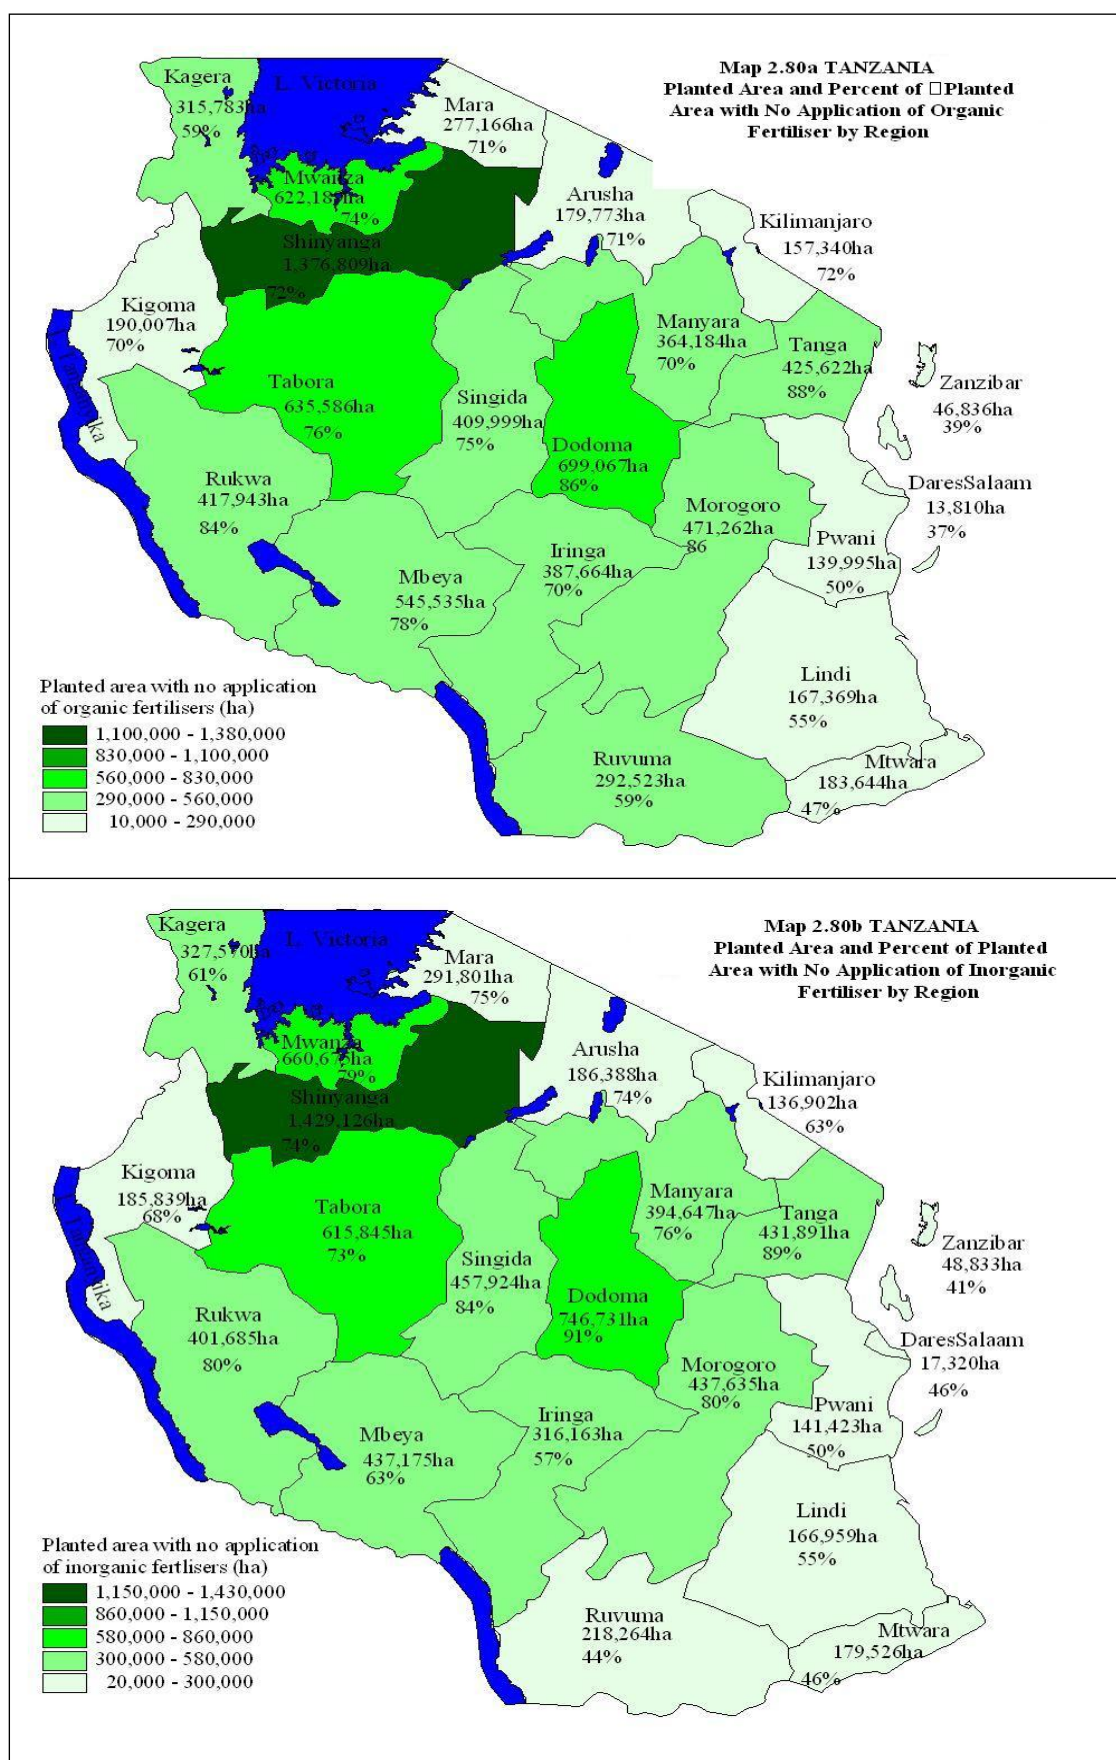

Pesticides are chemicals, which are used for controlling insects, diseases and weeds on crops. This section analyses the use of these chemicals by smallholders on both annual and permanent crops in Tanzania. Insecticides are the most common pesticides used in the country (Chart 2.76) accounting for 71% (770,036 ha) of the total planted area applied with pesticides. Insecticides are followed by herbicides (203,175 ha, 19%) and fungicides (105,124 ha, 10%).

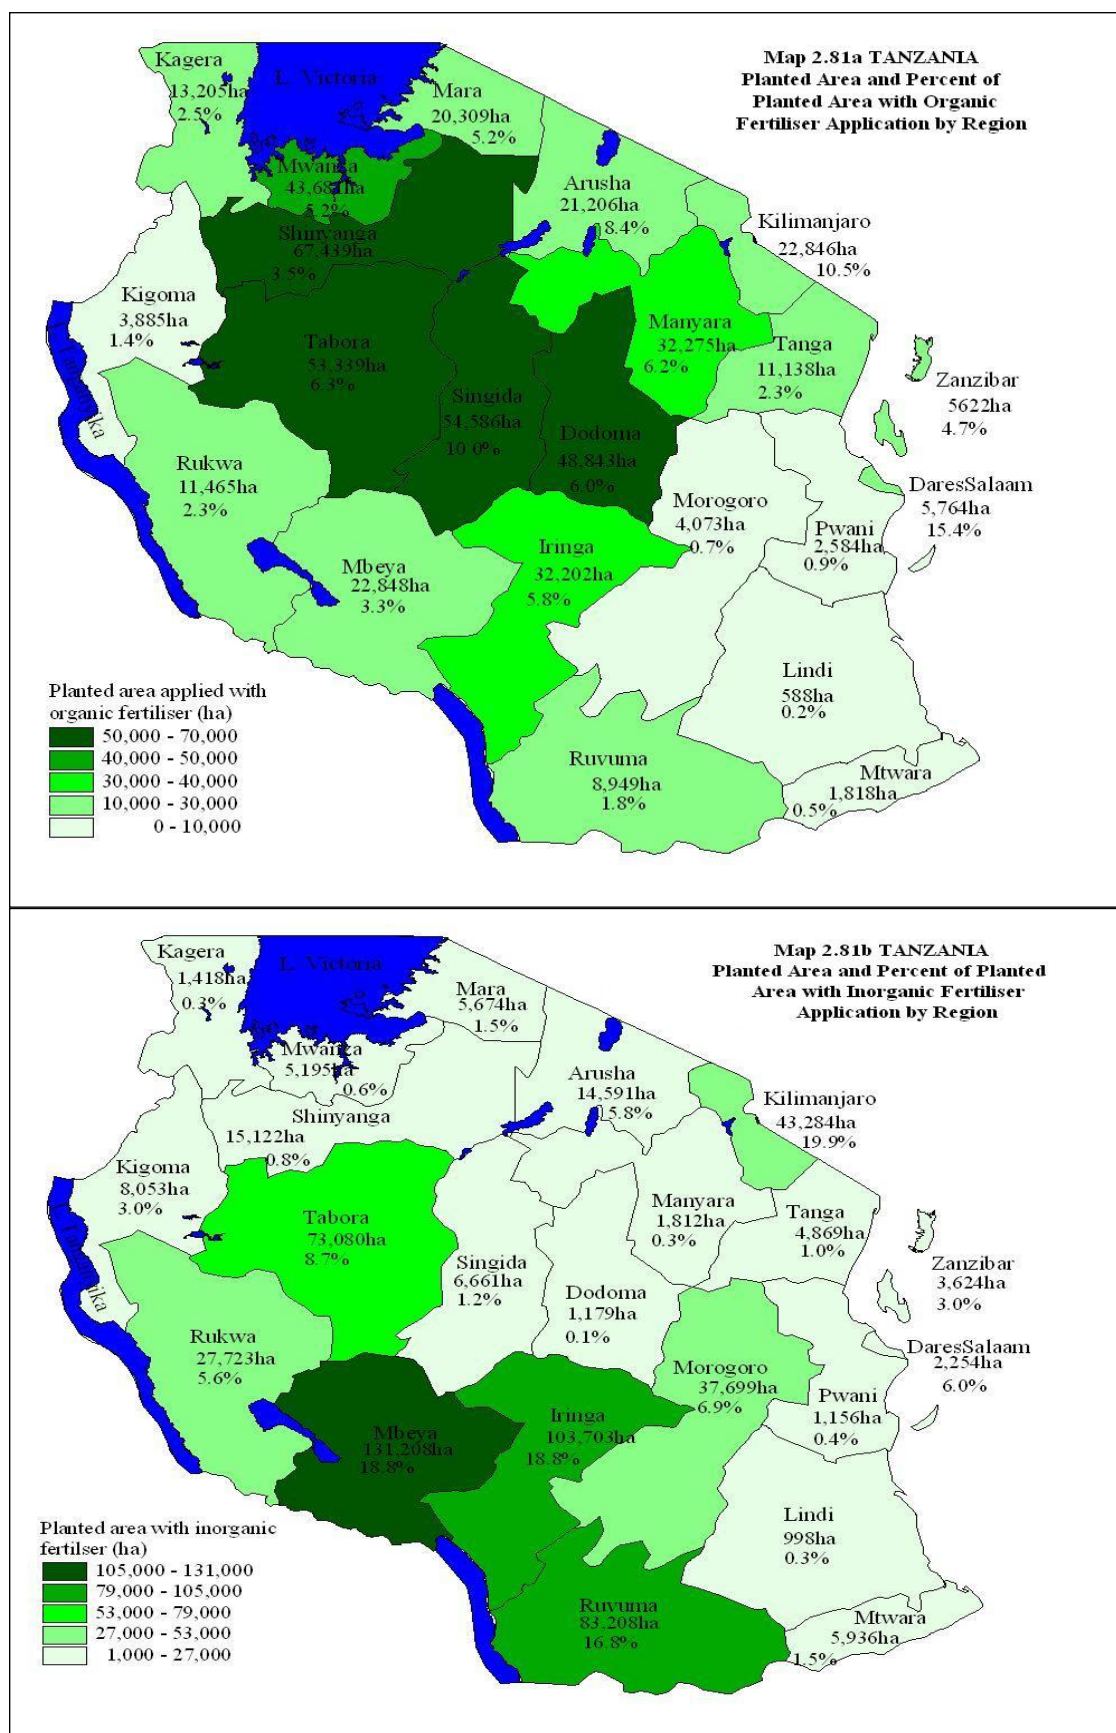

**Table 2.13 Use of Pesticides During Short and Long Rains**

Pesticide	Area Planted - Short Rains	Area Planted - Long Rains	Total Area Planted with Pesticides
Fungicides	21,072	84,052	105,124
Herbicide	63,981	139,194	203,175
Insecticide	141,924	628,111	770,036
<b>TOTAL</b>	<b>226,977</b>	<b>851,358</b>	<b>1,078,335</b>

Generally, a greater part of the area is planted with pesticides during the long rains than in the short rains irrespective of the type of pesticide used (Table 2.13).

### 2.8.4.1 Insecticide

The use of insecticides was limited to only 9% (770,036 ha) of the total planted area, compared to the remaining 91% (8,038,735 ha) on which insecticides were not applied (Chart 2.77). At national level, the total area planted with insecticides was 770,036 ha (768,204 ha on the Mainland and only 1,832 ha in Zanzibar). The two leading regions with the largest planted area with insecticides (Map 2.85) were Shinyanga (262,420 ha) and Iringa (124,234 ha).

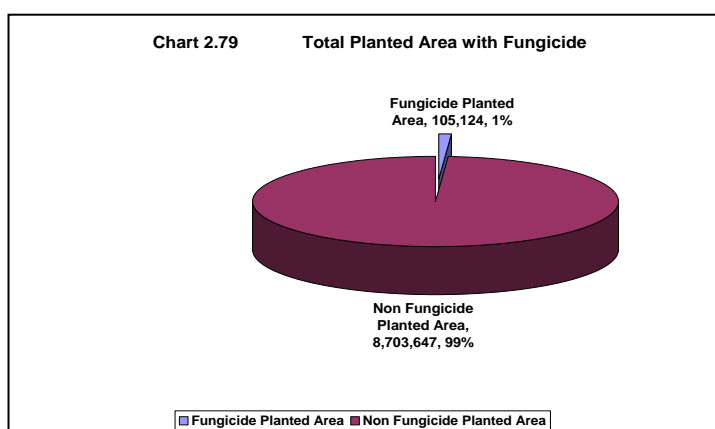

Comparatively, the total area planted with insecticides was larger during *Masika* (628,111 ha) than during *Vuli* (141,924 ha). In terms of total planted area, more insecticides (375,653 ha, 49%) were applied on cash crops (Chart 2.78) than other crop types followed by cereals (274,930 ha, 36%), pulses (68,919 ha, 9%), fruits and vegetables (33,521 ha, 4%), and oil seeds and oil nuts, with the smallest planted area applied (8,683 ha, 1%).

### 2.8.4.2 Fungicides

The total area planted with fungicides (Chart 2.79) was 105,124 ha (104,588 ha on the

Mainland and 532 ha in Zanzibar). Generally, larger planted areas were applied with fungicides in the long rainy season (84,052 ha) than in the short rainy season (21,072 ha). Fungicides were rarely used on annual crops accounting for only 1% (105,124 ha) while 99 percent of the total area was not planted with fungicides (Chart 2.80 and Map 2.86).

In terms of total planted area by crop type, more fungicides are used on cereals (36,696 ha, 35%) than other crop types. This was followed by fruits and vegetables (24,036 23%); roots and tubers (14,239 ha, 14%); cash crops (13,742, 13%); pulses (12,690, 12%); and oil seeds and oil nuts (13,742 ha, 13%).

The regions with the largest planted area with fungicides (Map 2.86) were Iringa (17,338 ha, 16%) Shinyanga (9,546 ha, 9%), Tabora (9,118 ha, 9%), and Dodoma (8,557 ha, 8%). Overall, very little fungicides were used in Zanzibar (537 ha, 1%).

### 2.8.4.3 Herbicide

Herbicides were the least used pesticide in Tanzania applied to only 2 percent (203,175 ha) of the total planted area. In contrast, 98 percent (8,605,596 ha) of the area is not planted with herbicides (Chart 2.81 and Map 2.87).

Based on total planted area by crop type (chart 2.82), more herbicides were used on cereals (181,008 ha, 89% of the area applied with herbicides) than on other crop types. This was followed by pulses (7,610 ha, 4%), cash crops (7,136 ha, 4%), fruits and vegetables (4,691, 2%), oil seeds and oil nuts (1,769 ha, 1%), and roots and tubers (961 ha, 0%).

#### 2.8.4.5 Use of Pesticides on Permanent Crops

Use of fungicides, herbicides, and insecticides on permanent crops was variable (Chart 2.83) for the Mainland and Zanzibar combined, the largest area (261,376 ha, 53%) was applied with fungicides followed by insecticides (189,475 ha, 39%), and herbicide (40,508 ha, 8%).

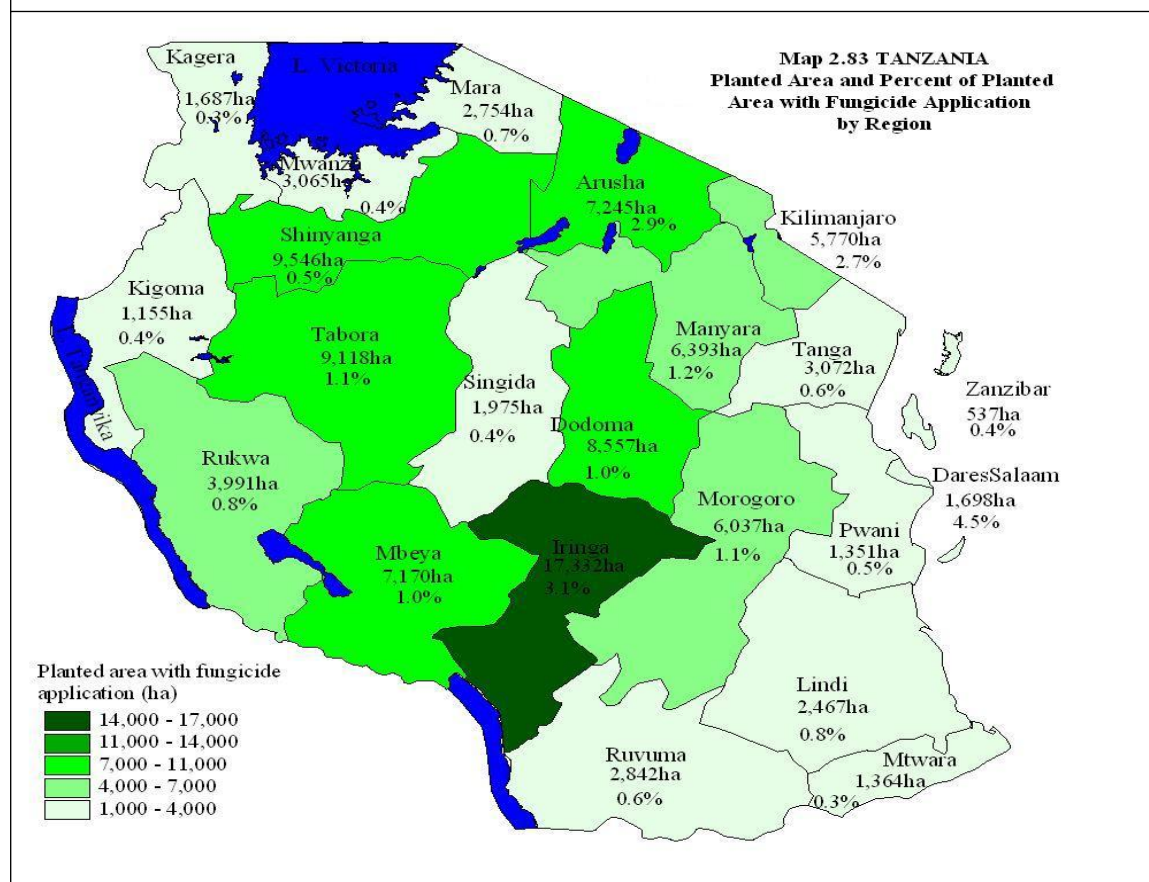

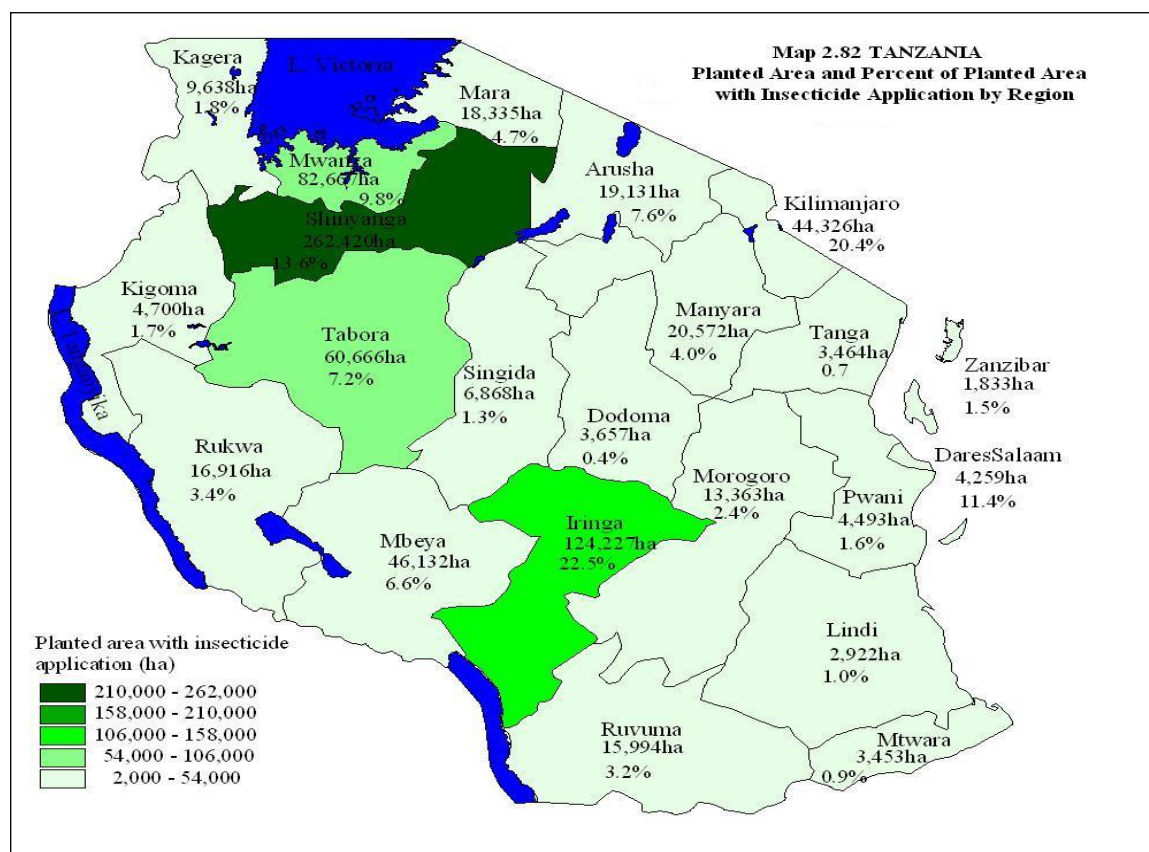

In general, pesticides were used more on the Mainland than in Zanzibar (Table 2.14). In the Mainland, the area planted with fungicides was (261,366 ha); herbicides, (40,495 ha) and insecticides (189,457 ha) each representing 99.9% of the applied area.

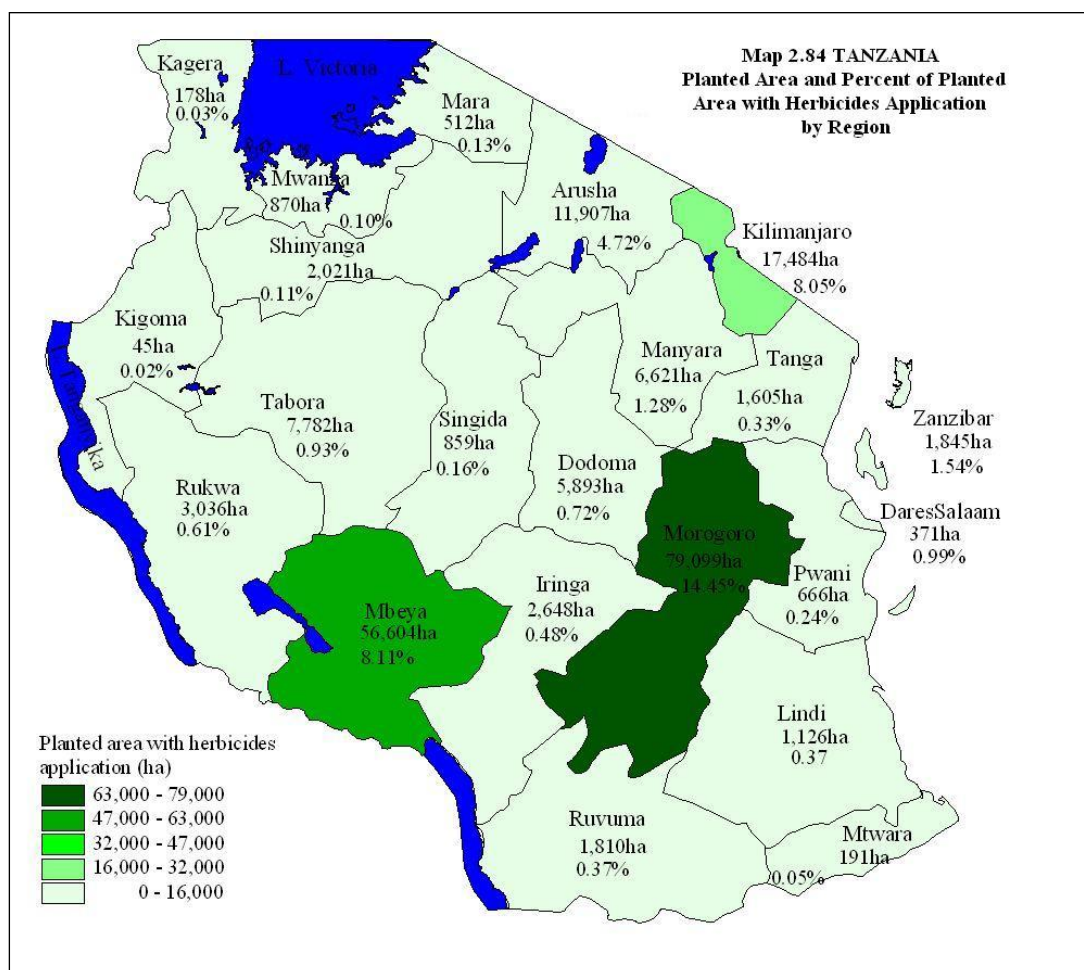

Large areas applied with fungicides were recorded in Mtwara (84,362); Lindi (57,325), and Mbeya (34,205 ha). The leading regions in the use of herbicides were Mbeya (22,766 ha), Ruvuma (7,095 ha), and Morogoro (4,485 ha) while the large areas planted with insecticides were in Mtwara (51,478 ha), Mbeya (41,487 ha), and Lindi (31,071 ha).

**Table 2.14. Pesticide application on Permanent Crops by Type of Pesticide and Region**

<b>Region</b>	<b>Planted Area with Fungicide</b>	<b>Planted Area with Herbicide</b>	<b>Planted Area with Insecticide</b>

<b>National total</b>	<b>261,376</b>	<b>40,508</b>	<b>189,475</b>

## 2.9 Crop Storage

Households growing crops store them for purposes of household food security and for seed for the following planting season. Survey data showed that in all regions on the Mainland and Zanzibar, over 90% of the households that grew crops stored their produce, except

Arusha (89%), Pwani (88%) and Kilimanjaro (87%). Dar es Salaam had the least percent (73%) of the households that stored crops (Map 2.85). The major crops stored were maize, followed by beans and other pulses and sweet potatoes. Other crops were also stored by very few households (Chart 2.84).

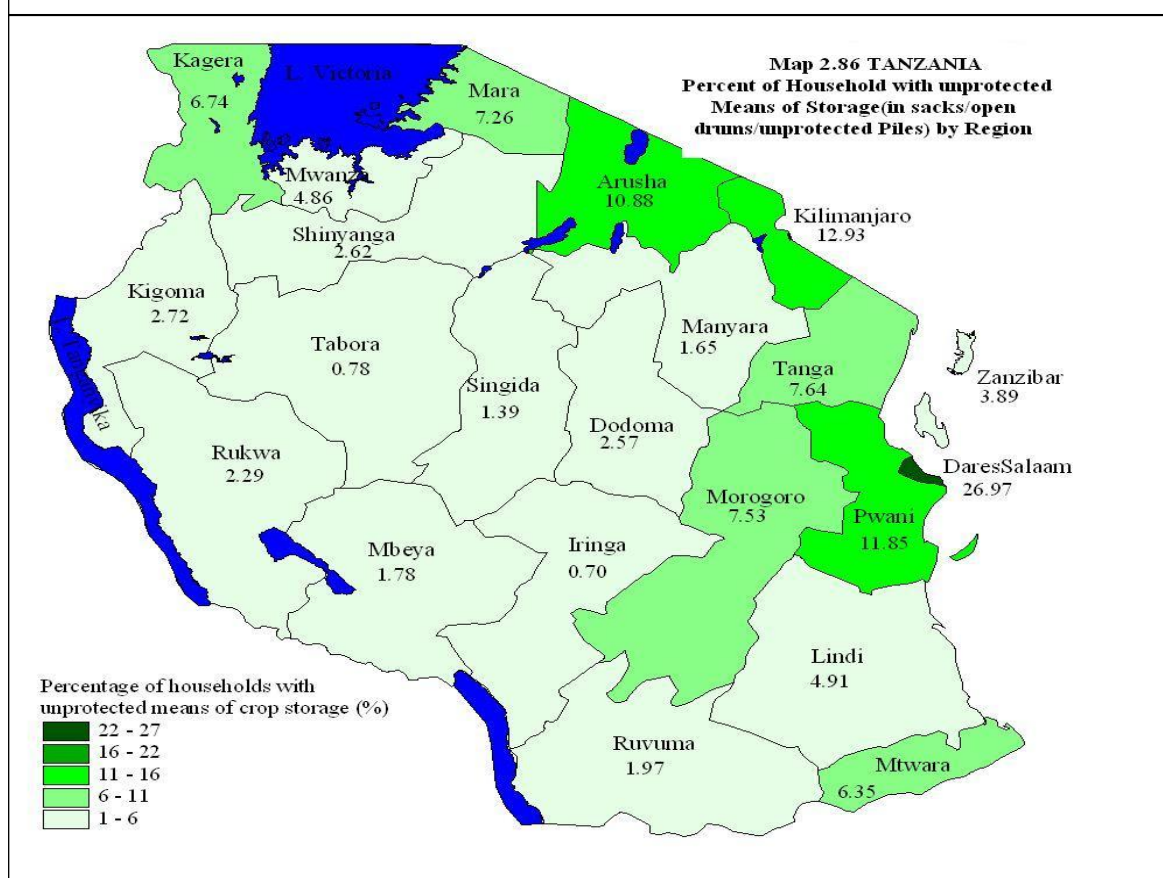

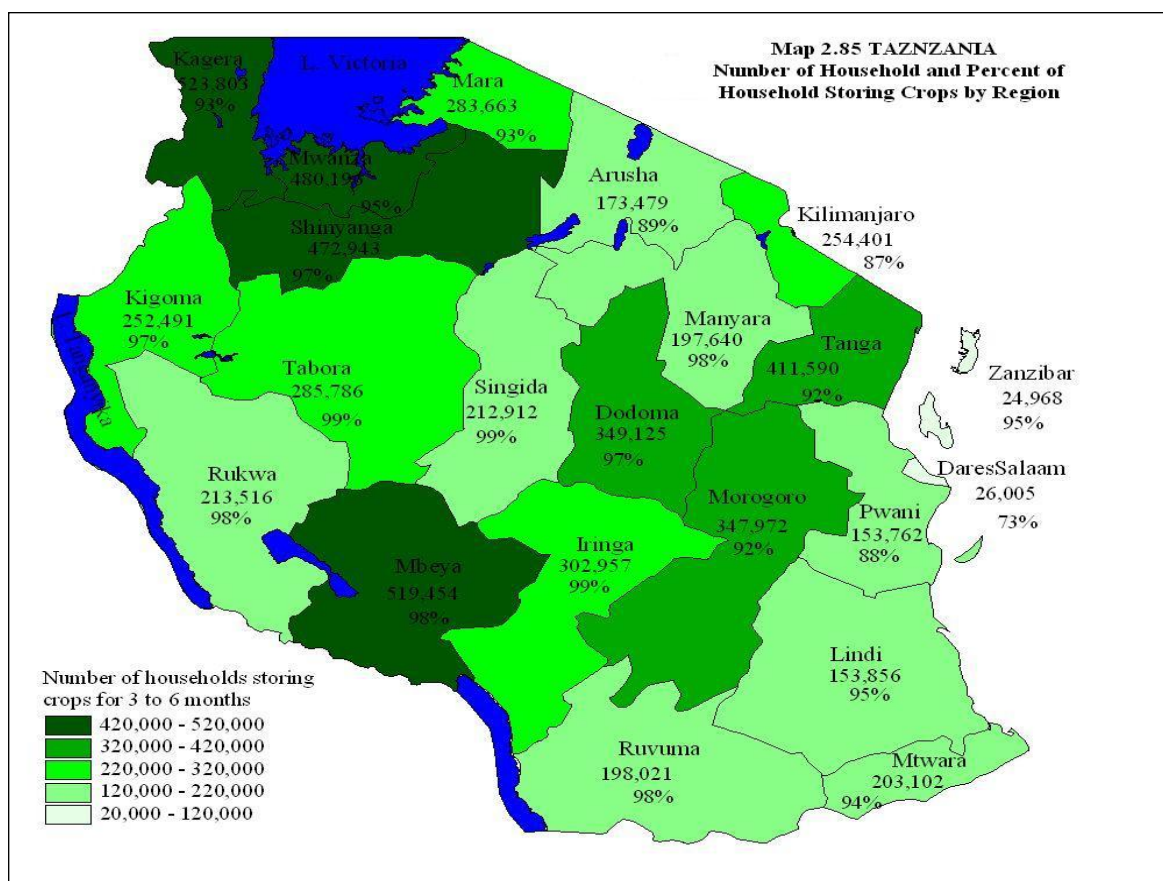

Based on percent of maize stored (Chart 2.85), the region with the highest percent of households storing maize was Ruvuma (97.3%). Other regions with households storing over two-thirds or more of the maize crop were Shinyanga (87.4%), Dar es Salaam (84.2%), Mwanza (75.1%), Lindi (71.6%), Kilimanjaro (70.8%), and Mbeya (69.2%)

Most households did not store crops. However, those that did store mostly used locally made traditional structures (Chart 2.86) followed by sacks/open drum. The other methods including unprotected pile, modern store, and airtight drums were rarely used (Map 2.86).

## 2.10 Crop Marketing

The number of households that reported selling of crops in Tanzania was estimated at 4,652,573 which represent 80 percent of the total number of crop growing households. This shows that most farming households were involved in selling crops even though there were variations across regions. The regions with the highest percent of households that sold crops were Kagera, Mbeya, Shinyanga, Mwanza, Tanga, Morogoro, and Dodoma (Chart 2.87 and Map 2.91).

### 2.10.1 Main Marketing Problems

Households reported various marketing problems. The majority (67%) indicated that too low open market price was the most important marketing problem. Other reported problems were minor, cited by 5% or less of the households growing crops.

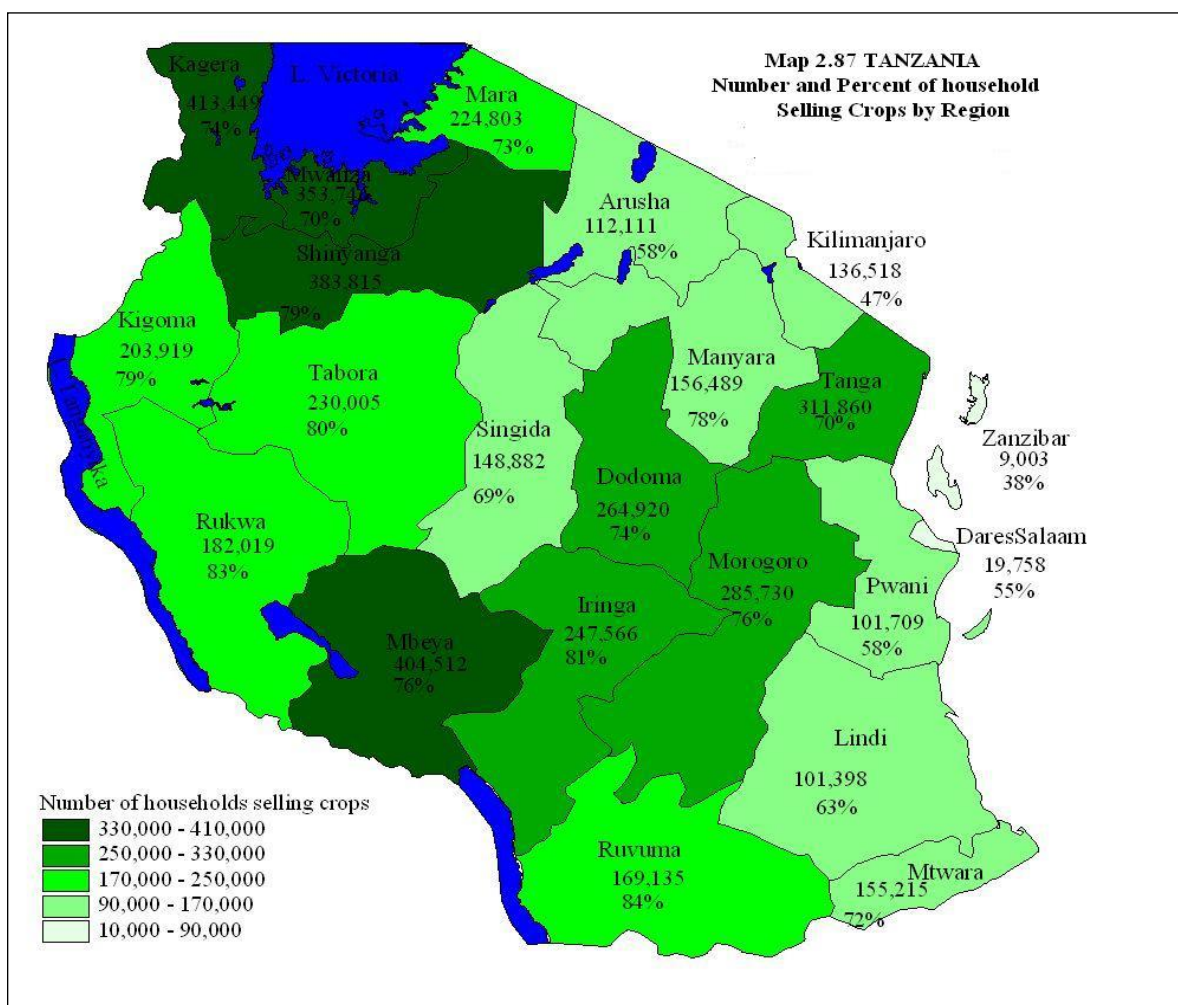

These included transport cost being too high, crop markets being too far, and lack of transport (Chart 2.88). The magnitude of each of these problems was felt more during the long rains than in short rains.

**Chart 2.88 Percent of Households Reporting Marketing Problems by Type of Problem**

**Map 2.87 TANZANIA  
Number and Percent of household  
Selling Crops by Region**

## 2.11 Crop Extension Services

The number of households that received extension advice in Tanzania (Chart 2.89) in 2007/08 was 3,849,829 (67%) while those that did not were 1,927,007 (33%). A similar percentage distribution also applied when the data on the households that received extension was desegregated between the Mainland and Zanzibar. In

this case, 3,805,989 households received extension services in the Mainland and 43,840 households in Zanzibar.

Generally, access to extension advice by farming households varied greatly among regions (Chart 2.90 and Map 2.94). However, the proportion of households receiving extension advice was highest

in Dodoma (91.3%), followed by Kilimanjaro (83.2), Manyara (82%), Iringa (80.4%), Arusha (80. %), Mbeya (78.2), and Dar es Salaam (73.8). In contrast, the

households receiving the least extension advice were found mostly in Lindi (40.8%), and Rukwa (48.8%) regions.

### 2.11.1 Extension Services Provider

The government provided most of the extension advice and was able to reach 80 percent of the clients (3,401,131 households, 88%) followed by neighbours (827,470 households, 21.5%). The other sources were mass media, particularly radio/television/newspapers (617,963 households, 16.1%), NGOs/development projects (450,030 households, 11.7%), large scale farmers (174,106, 4.5%) and cooperatives (113,464, 2.9%) (Chart 2.91).

### 2.11.2 Extension Advice by Type of Provider

The type of extension advice by source clearly demonstrated that the government was the main source of extension followed by, neighbours, and NGO/development project (Chart 2.92). However, the only exception is with respect to extension advice on erosion control, and irrigation where NGO/development project was the

second most important source of advice instead of neighbours as was the case with other types of extension advice including spacing, agrochemicals, organic and inorganic fertilizer, mechanization and labour saving technologies, improved seeds, crop storage, and vermin control (Chart 2.92).

Chart 2.91 Percent of Households Receiving Extension by Type of Extension Provider

Chart 2.91a Number of Households Receiving Extension Service by Type and Provider

## 2.12 Access to Implements

The majority of the implements found on farming households on the Mainland are hand hoes (5,581,182 households, 97.8%) and swords (5,333,002 households, 93.5%). Likewise in Zanzibar, the majority of farming households had access to hand hoes and swords (118,358 households, 89.5% and 123,833 households, 93.7%, respectively). Relatively a small number of households used other farming implements such as ox-plough (823,494 households, 14.4%), castrated bulls (783,089 households, 13.7%), hand sprayers (666,322 households, 11.7%) and cows (579,681 households, 10.2 %). Other farming implements which was used accounted for a very small percent (less than 10%) with powertiller having a least percent of households (0.3%) (Chart 2.92).

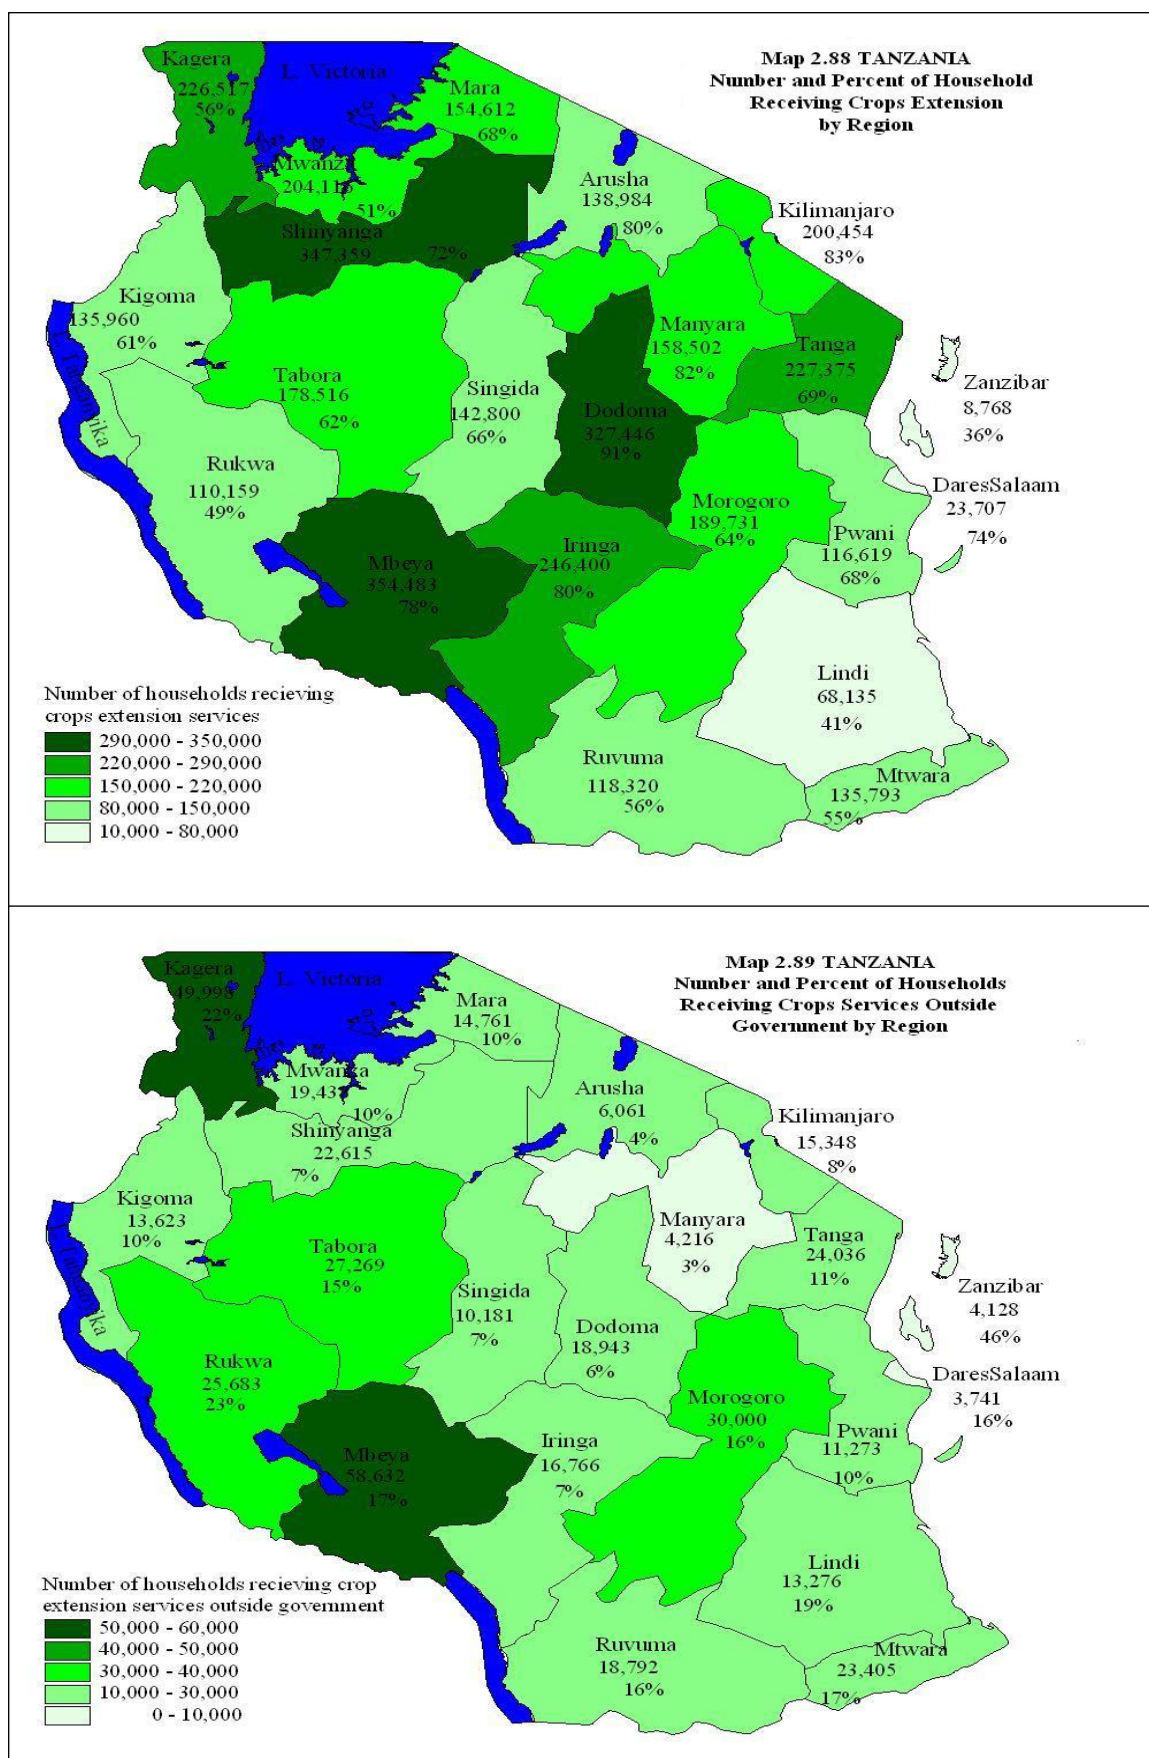

On the Mainland, large numbers of households that used hand hoes were mainly found in Iringa, Ruvuma, Morogoro, Mwanza, Mtwara and Mara with about 99% of the total agricultural households. Likewise, households that used swords were mainly

found in Kilimanjaro (99%), followed by Tanga, Pwani, Kagera and Dar es salaam each with 97 percent. Other regions with access to sword ranged from 87 to 96 percent. The general indication is that the majority of the households relied on manual implements (Chart 2.93 and Map 2.90).

In Zanzibar, the majority of households that had access to hand hoes were found in North Pemba (27.1%), South Pemba (24.8%) and North Unguja (20.5%) while those with access to swords were mainly found in North Pemba (24.5%), South Pemba (23.3%) and North Unguja (23.0%).

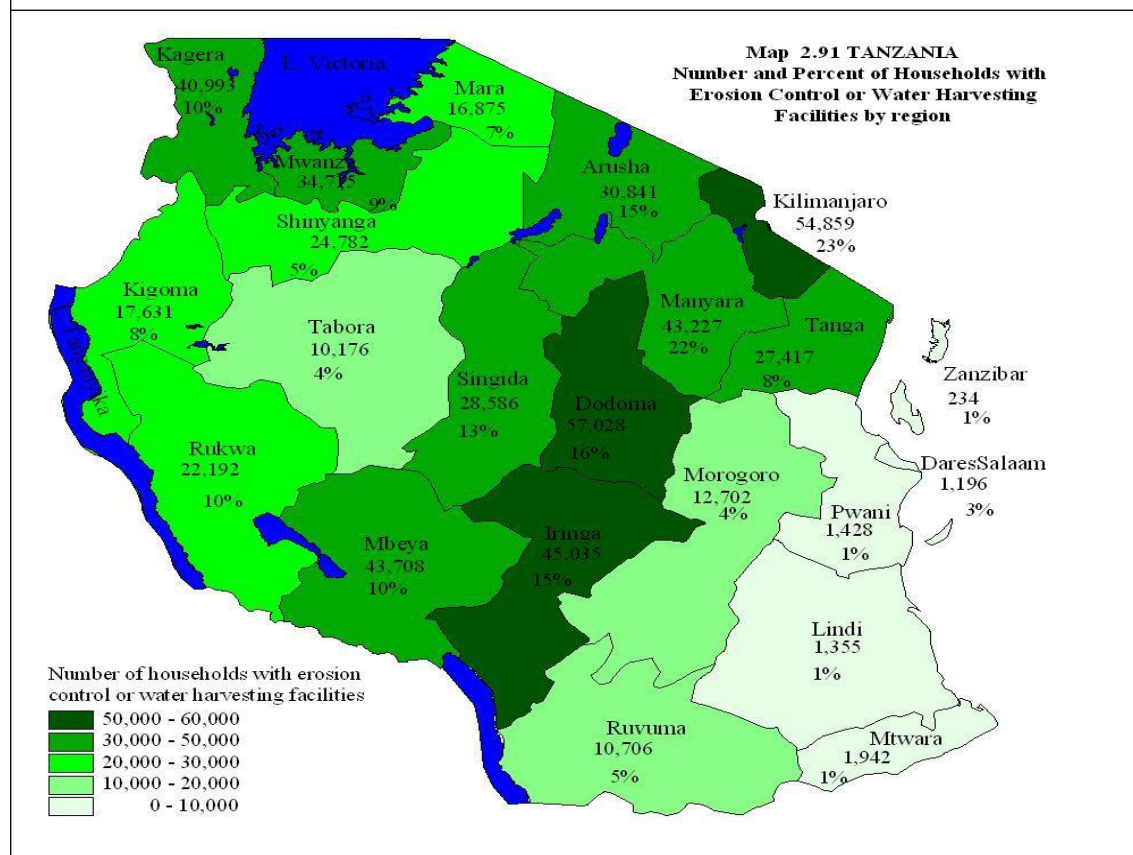

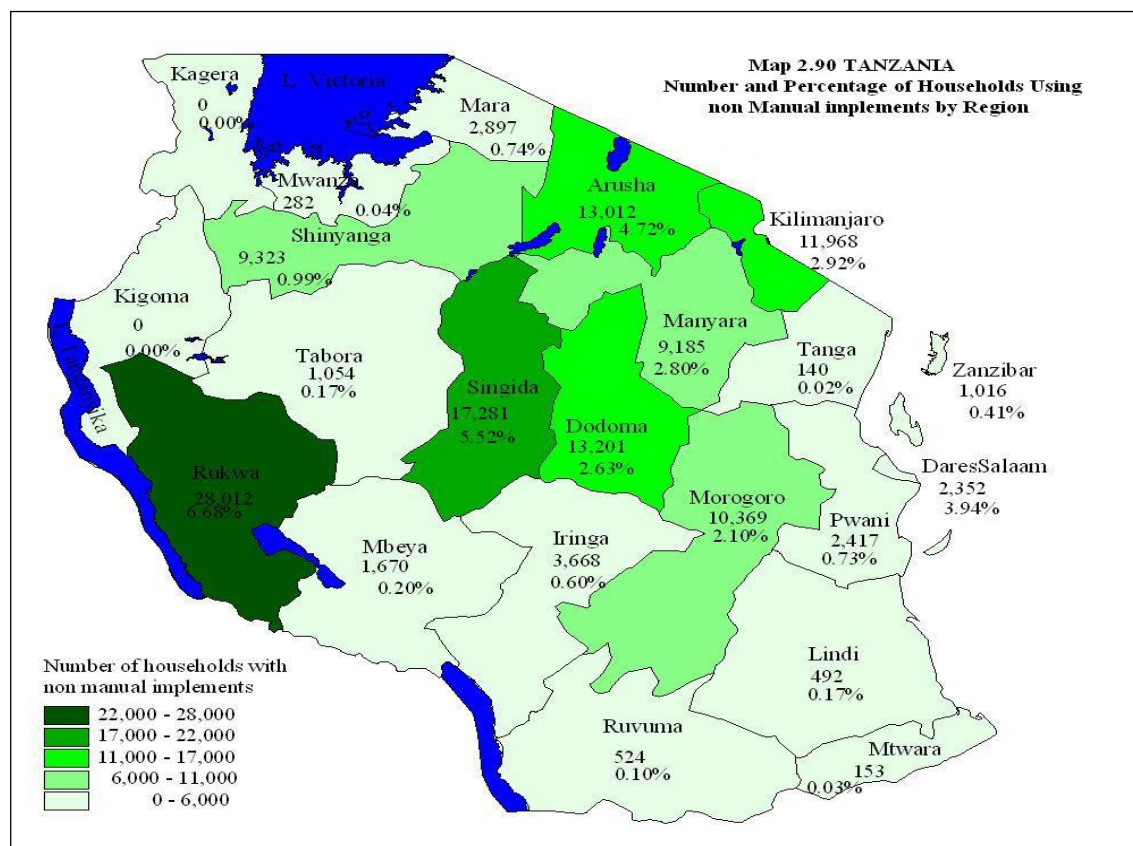

### 2.13.2 Soil Erosion Control and Water Harvesting Facilities

Soil erosion was not considered a serious problem in rural area households. The number of households that reported having soil erosion problems was 779,563 accounting for 13% of the total agricultural households. In contrast 87% (5,059,079 households) reported not having soil erosion problems (Chart 2.95).

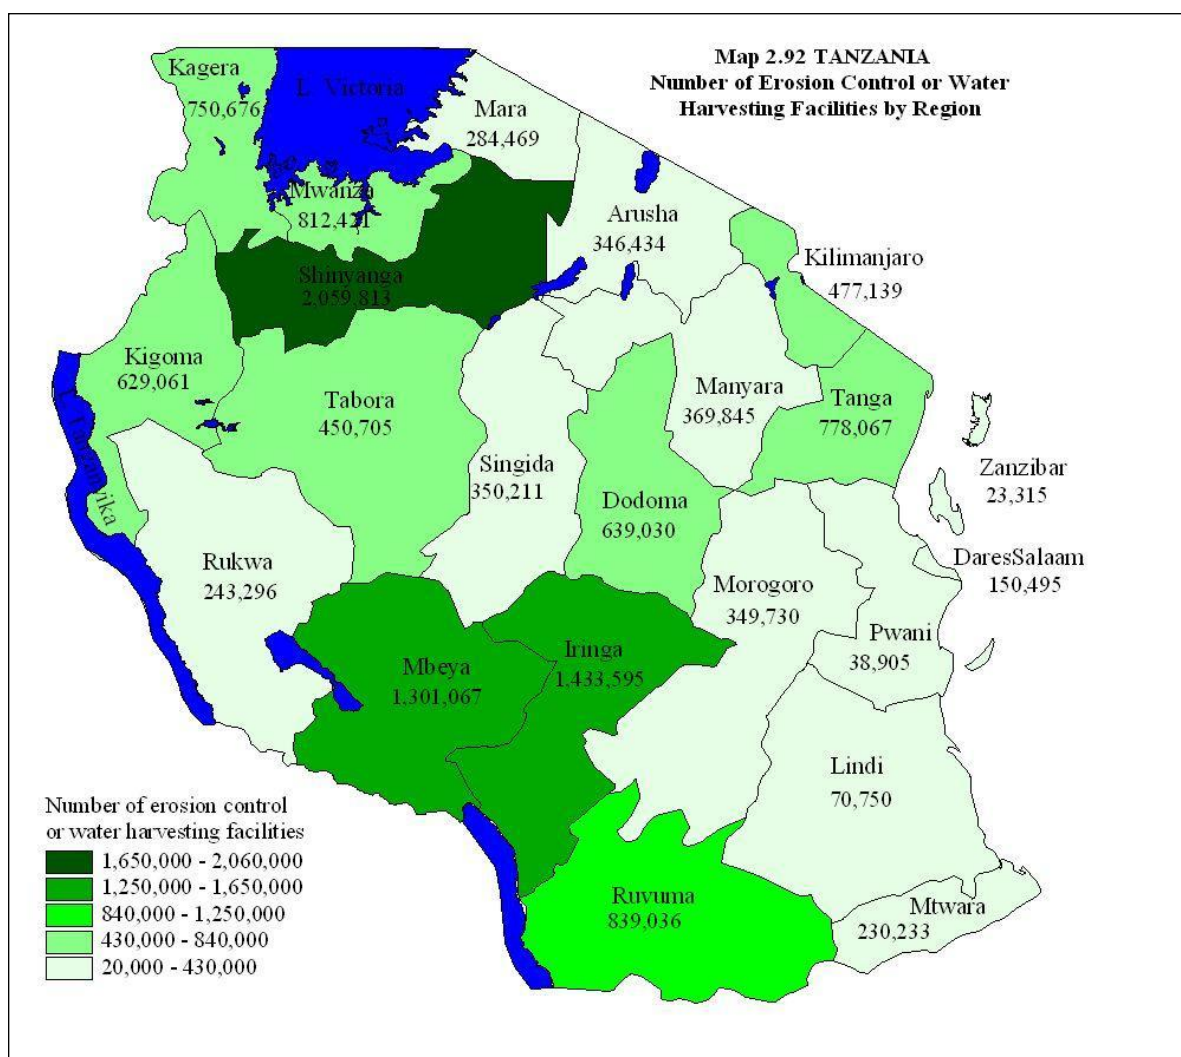

However, efforts to control soil erosion have been made (Chart 2.96a and Maps 2.91 and 2.92) such that Kilimanjaro had the highest proportion of households with soil erosion control and water harvesting facilities (22.6%), followed by Manyara (21.8%), Dodoma (15.9%), Arusha, (15.0%) and Iringa (14.7%). On the other hand, Zanzibar, Pwani, Lindi and Mtwara had the lowest number and percent of households with soil erosion and water harvesting facilities (less than 1%).

## 2.14 Agricultural Credits

In the census, household members were asked to provide at most three main sources of credits by rank of importance. The results show that, only 2.4 percent of the total agricultural households borrowed money for agricultural activities. The reason for, was that, most (31.1%) of the agricultural households did not borrow money because they did not know how to get credit for agriculture. Those who reported that credit was not available accounted for 18.3 percent and those

**Chart 2.97 Number of Households Receiving Credit by Main Source of Credit Second Rank of Importance**

**Chart 2.97a Percent of Households Reporting the Main Reasons for not acquiring Credit**

**Chart 2.97b Number of Households Receiving Credit by Main Source of Credit First Rank of Importance**

who reported that they don't know about credits were 18.0 percent. The remaining reported reasons were less than 15 percent (Chart 2.97a). The highest percentage of the received credits for agricultural activities was occupied by females in all the three ranks of importance (annex tables 7.7, 7.8 and 7.9).

In the first rank of importance, the main agricultural credit providers to the households in Tanzania were cooperatives which provided credit to (38,398 agricultural households, 28%) followed by family, friends or relatives (32,188 households, 23%) and savings and credit

**Chart 2.98 Number of Households Receiving Credit by Main Source of Credit Third Rank of Importance**

societies (25,576 households, 19%). The remaining sources accounted for less than 15% (Chart 2.97a). While in the second rank of importance, cooperatives which had 26 percent and family, friends or relatives (19%) were still the main providers of agricultural credits followed by savings and credit societies and banks each with 16 percent.

In the third rank of importance, the main providers of agricultural credit were banks and cooperatives each with 20% percent followed by private individuals (17%) (Chart 2.98).

## 2.15 Poverty Indicators

### 2.15.1 Roofing Materials

The main type of roofing materials both in the Mainland (48.9 percent) and Zanzibar (60.5 percent) rural agriculture households dwelling was iron sheets followed by grass/leaves with Mainland (38.2%) and Zanzibar (35.4%). The percentage of households using iron sheet for roofing has increased from 37.1 percent in the 2002/03 census to 48.9 percent in the 2007/08 census while for grass/leaves roofing material the percentage has decreased from 46.8 in 2002/03 census to 38.2 in the 2007/08 census in the Mainland (Table 2.15). The percentage of dwellings that used modern materials in the Mainland was 51 and that of Zanzibar was 64.

Roofing Materials	2007/08					2002/03	
	Mainland	%	Zanzibar	%	Tanzania	Mainland	%
Iron Sheets	2,787,961	48.9	79,978	61	2,867,939	1783695	37.1
Tiles	45,862	0.8	2,732	2.1	48,594	37198	0.8
Concrete	7,943	0.1	475	0.4	8,418	11236	0.2
Asbestos	55,386	1	1,557	1.2	56,943	19290	0.4

### 2.15.2 Wall Materials

There are different materials used for construction of houses. In Tanzania the wall materials used for construction of household dwellings in rural agriculture households depend on the area. Some regions prefer to use baked bricks, some un-dried bricks etc.

The leading materials (Chart 2.99) used for rural agriculture households in Tanzania were made of poles and mud (32.6%) followed by sun-dried bricks (28.3%), baked bricks (24%). The leading materials used to construct walls for dwelling in the Mainland are poles and mud (32.2 %) followed by sun –dried bricks (28.9), while the leading materials in Zanzibar were poles and mud (51%) followed by cement blocks (21%).

### 2.15.3 Floor Materials

Floor materials is one of the indicator of better health environment especially for children in the households. A good number of dwellings in Tanzania (81.8%) use earth, sand and dung (Chart 2.100) followed by cement (15.6%). The situation is comparable in both Mainland and Zanzibar.

### 2.15.4 Toilet Facilities

Most rural agricultural households in Tanzania use traditional pit latrines (4,980,698 households, 85.3%) which compares favourably with the situation in 2002/03 (4,242,138 households, 88.3%). Furthermore, the proportion of

households without toilets also remained similar between 2007/08 (458,627 households, 7.9%) and 2002/03 (368,675 households, 7.7%) The number of households with improved pit latrines has increased (308,028 households, 5.3) in 2007/08 census as compared to that of 2002/03 census which was (82,435 households, 1.6%). More than one third of the households in Zanzibar (37.6) have no toilets, which was an improvement when compared to 2002/03 Census data where 49% of the households reported not to have toilet facilities (Chart 2.101).

### 2.15.5 Source of Energy for Lighting

Source of energy for lighting is one of the indicator for development of a country and health. Wick lamp is the most common source of lighting energy in Tanzania (Chart 2.102a) used by 67% of the households which is a slight improvement compared to 70% recorded in 2002/03. The second most commonly used source of energy for lighting was

the hurricane lamp (24% compared to 22% in 2003), followed by the pressure lamp (4% compared to 3.4% in 2003), firewood (2% compared to 2.5% in 2003), mains electricity (2% compared to 1.5% in 2003), candles (0.3% compared to 0.2% in 2003), solar (0.7% compared to 0.2% in 2003), and gas or biogas (0.1% same as 2003). The wick lamp was also the main source of energy for lighting in Zanzibar (72% compared to 73% in 2003) followed by mains electricity (12.2% compared to 5.1% in 2003).

### 2.15.6 Source of Energy for Cooking

The most prevalent source of energy for cooking was firewood, which was used by 94.5% compared to 96.1% of all rural agricultural households in Tanzania during 2003. Charcoal accounted for (3.9% compared to 2.6% in 2003). The remaining sources of energy for

cooking (Chart 2.102b) were crop residues, paraffin or kerosene, mains electricity, solar, livestock dung and bottled gas together accounted for 1.7 percent of households in Tanzania.

### 2.15.7 Access to Drinking Water

Water is one of the necessities of the day to day life of a human being. The information collected on main source of drinking water was for dry season and wet season. There is a very small difference but the pattern is the same for both seasons.

The main source of drinking water for rural agricultural households in Tanzania

for both seasons (Chart 2.103) was from unprotected wells with 25 percent as compared to 28 percent during dry season and 26 percent in the wet season during 2002/03 agriculture sample census.

The second most common source was piped water (25 % compared to 24% of households in 2003 during the dry season and 24% compared to 23% in the wet season); lakes /dams/rivers (16 % compared to 15% of households in the dry season during 2003 and 15% compared to 14% in 2003 during the wet season); protected wells (15% compared to 14% of households in the dry season during 2003 and 14% compared to 13% in the wet season during 2003); unprotected spring (11% compared to 14% in dry season during 2003 and 10% compared to 14% in wet season during 2003). Other sources of drinking water had less than 10 percent (Chart 2.103).

The distance to the source of water contributes very much to the household activities. Most rural agriculture households on the Mainland (64.9%) live less than 1 kilometre from the nearest source of drinking water during the wet season, compared to 56.4 percent during the dry season.

There is little difference in access to drinking water between the wet and the dry season with the exception of those households that live far from the source. During the dry season 35.5 percent of the households obtain drinking water from a distance of between 1 and 3 kilometres compared to 32.4 percent during wet season. Very few (2.7%) households travel 3km and

above to obtain drinking water during the wet season, however during the dry season it is 8.1 percent (Chart 2.104).

### 2.15.8 Time Spent to Main Source of Drinking Water

Rural agriculture households that spent less than 10 minutes to get to the source, wait for water and return home were 18.6% during dry season and 25.4% during the wet season. On the other hand, households that spent from 10 minutes to 19 minutes were 7.1% in dry season and 8% in wet season (Chart 2.105). Households that spent more than 30 minutes were 67% during dry season and 60% in wet season.

### 2.15.9 Ownership of Assets

A radio was the most commonly owned asset in rural agriculture households with 67% of the total agricultural households (3,920,047 households) owning at least one radio compared to 55% in 2003

Bicycles were the next most common asset owned

(51% as compared to 43% in 2003) followed by mobile phones (32% compared to 2% in 2003) and pressing iron (24% compared to 19% in 2003), (Chart 2.106).

### 2.15.10 Food Consumption Pattern

#### 2.15.10.1 Number of Meals per Day

The number of meals normally taken by a rural agriculture household in the country is either two (53% compared to 56% in 2003) or three (45% compared to 41 percent in 2003) meals per day. Only 2 percent of the rural agriculture households take one meal per day compared to 3 percent in 2003 (Chart 2.107).

The number of meals taken per day in Zanzibar (Chart 2.108) has increased from 1% in 2003 to 3% in 2008 and those households taking two meals per day also has increased from 38% in 2003 to 57% in 2008 while households taking three meals per day has decreased from 62% in 2003 to 40% in 2008

### 2.15.10.2 Household Food Security

In Tanzania, 1, 960,865 households (34% of the rural agricultural households in the country) compared to 1,547,815 households (32 %) in 2003 rarely experienced problems in satisfying the household food requirements. Only 580,026 households (10%) compared to 342,642 households (7%) in 2003 sometimes experienced problems in

satisfying their food requirements; 10 percent often experienced problems for both time periods and 6 percent compared 7 percent in 2003, always had food problems. About 40 percent compared to 44 percent, in 2003, of the agricultural households never experienced food insufficiency problems (Chart 2.109).

In Zanzibar, 41 percent never experienced food insufficiency compared to 60 percent in 2003. The percentage of households that rarely experienced problems was 36 percent compared to 27 in 2003.

Overall, 5 percent of the households reported to always have food problems in Zanzibar as compared to 2 percent in 2003.

## **2.16 Conclusions and Recommendations**

The Agriculture Census collected a large amount of data on, among others, crop and livestock production and planted area, input use, storage, marketing, and farmer access to extension services. The analysis of the crop sector in this report focuses mainly on production, area under production and productivity. In some cases data on crops are compared with those of previous census and surveys at national level to determine changes that occurred between the census periods. The conclusion is organized into two sections: The first section describes the current status of agriculture in Tanzania while the second section discusses the main findings of the Agriculture Sample Census.

### **2.16.1 Current Status of Agriculture in Tanzania**

A total of 5,838,523 households engaged in agriculture (field and horticulture crop production, livestock and fish farming and pastoralism) were sampled of which 5,706,329 (97.7%) were in the Mainland and 132,193 (2.3%) were in Zanzibar. In the Mainland, large concentration of households engaged in agriculture were recorded in Shinyanga, Mbeya and Kagera regions each with 400 - 500,000 households, followed by Dodoma, Tanga, Iringa, and Mwanza with 300 - 400,000 households. Dar es Salaam region had the least number of households engaged in agriculture (35,160). In Zanzibar, 18,651 agricultural households were located in Urban West district and 32,895 in North Pemba.

Land was predominantly planted with annual crops (66%) while permanent or perennial crops occupied another 15% and another 8% was planted with a mixture of annual and permanent crops. The area kept under fallow was about 11% implying that at any one time most of the land was being utilized for crop production

At national level, slightly more than a third (37%) of the households indicated to have sufficient land available for their use while the remaining 63% considered the land to be insufficient. Land sufficiency in Zanzibar was relatively better compared to the Mainland where 44% of the households indicated having sufficient land. The high proportion of households reporting land insufficiency is consistent with the low average land available per household (1.3 ha). Land

sufficiency varied greatly between regions. In Mtwara, Lindi, Ruvuma and Tabora regions at least 50% or slightly more of the households reported land sufficiency while all other regions reported land sufficiency below 50%. In the latter group, land scarcity was most acute in Mara, Manyara and Arusha regions where more than 80% of the households complained of land insufficiency.

There is a wide variety of crops grown in the country. Nevertheless, maize dominates smallholder crop production. Other important food crops include cassava, bananas, paddy, beans and groundnuts. The rest of the crops are only grown in small amounts. But some of these crops such as tea and coffee have significant importance in certain areas where the climate may be more suitable for their production.

Crop yields are very low. In addition, capital investment in smallholder agriculture is quite limited as only very small areas undertake irrigated agriculture and the use of complementary inputs such as fertilizer and pesticides is equally low. High coverage of extension services was evident; however, some of the highest crop producing regions received less extension than other regions. Even though oxen use is largely limited to areas that have large population of cattle such as Shinyanga, hand cultivation remains the predominant means of land cultivation.

Most storage is unprotected. Besides the price of produce being too low, the other marketing problems reported by smallholders were high transport costs and large distances to markets.

### **2.16.2 Important Issues**

This section presents some of the main findings of the census based largely on static data produced by this census and to only small extent on time series data from other sources.

- Crop productivity
- Use of inputs
- Access to land
- Irrigation farming
- Access to extension services

### **2.16.3 Crop productivity**

Crop productivity varied from one crop to another. In general, productivity for most crops was low compared to existing potential.

---

*Recommendation: Steps should be taken to encourage the use of fertilizer and increase the productivity of the crop production sector in the country.*

### **2.16.3 Use of inputs**

Generally, the use of inputs including improved seeds, inorganic and organic fertilizers varied across regions. Of these inputs, improved seeds were most widely used. However, a larger area is planted with local seeds than with improved seeds. Also, although the use of pesticides was rather limited most households used more insecticides than fungicides and herbicides.

*Recommendation: Use of fertilizers and chemical inputs is critical for enhancing crop productivity under smallholder farming setting countrywide. Hence there is need to put in place mechanisms that will not only ensure their access by smallholders but their use as well.*

### **2.16.4 Access to land**

Majority of households reported insufficient access to land with the situation being relatively better in Zanzibar compared to the Mainland. The high proportion of households reporting land insufficiency is consistent with the low average land available per household (1.3 ha). Land scarcity was most acute in Mara, Manyara and Arusha regions where more than 80% of the households reported of land insufficiency.

*Recommendation: Government should work out a strategy to overcome land insufficiency especially in regions with acute problem of land scarcity.*

### **2.16.5 Irrigation farming**

Only a small proportion of crop land is irrigated. Consequently, benefits of using productivity enhancing inputs such as improved seeds and fertilizer are fully exploited.

*Recommendation: Efforts must be made to ensure expansion of irrigation facilities in order to ensure that majority of farmers have access to these facilities*

**2.16.6 Access to extension services**

In general, except for few regions, access to extension services was rather high. Public staff provided the main source of extension advice. Wider promotion of improved technologies for enhancing crop productivity is, to some extent, dependent on an effective extension system whose services are accessible to its clientele.

*Recommendation: Besides enhancing access to extension services, the public based extension service should aim to improve the quality of its services to ensure increased adoption of improved practices for increased crop productivity.*

### 3.0 Regional Profiles

The following is a summary of regional profiles with respect to crop production in each of the 21 regions in Mainland Tanzania.

#### 3.1 Shinyanga

Shinyanga region had one of the largest concentration of households engaged in agriculture. Besides, it is one of the top five regions having 90% or more of the land utilized. Also, generally, land scarcity was less acute in the region such the total utilizable land remained slightly above the 2002/03 national average.

Shinyanga region was the single most important region for cotton production, which accounted for 378,666 ha or 65.9% of the planted area in the country and the first largest area planted with sorghum (98,145 ha or 17.3%). Moreover, it had the highest percentage of land under maize (521,777 ha) even though this was equivalent to only 27% of the land area in the region

In addition, Shinyanga region had the highest percentage of land planted with paddy in the country (19.3%) and the highest actual regional land planted with paddy (175,192 ha).

The region had the third largest area planted with irrigation (29,783 ha) after Kilimanjaro (36,607ha) and Mbeya (33,418 ha) and it had the first highest percent of households in using oxen/bulls in land cultivation (8.8%). Moreover, it had the first largest area planted with organic fertilizer (67,439 ha). However, it had the first largest area planted without fertilizer (1,840,407 ha). Shinyanga had the third highest percent of households reporting selling crops. On the other hand, it had the second largest number of households without planted trees Shinyanga (926,930).

#### 3.2 Dodoma

Dodoma region and other three regions, namely Tanga, Iringa, and Mwanza had 300-400,000 concentration of households engaged in agriculture.

Dodoma, with 106,449 households equivalent to 59.5% of all bulrush millet producing households, was the largest producer, had the largest actual planted area (47,738 ha) and the largest quantity harvested (47,738 tons). Besides, it had the third largest area planted with pigeon peas.

In addition, the region had the third largest number of households involved in pigeon pea production (24,329) and the largest planted area per household (0.64 ha), followed by Manyara

(0.59 ha), Shinyanga (0.56 ha), Rukwa (0.55 ha), Tabora (0.54 ha) and Singida (0.50 ha). Also, the region had the third largest area planted with sorghum (96,147 ha , 16.9%) after Shinyanga (98,145 ha or 17.3%) and Singida (97,513 ha or 17.2%).

The region had the third largest planted area without fertilizer (766,437 ha) after Shinyanga (1,840,407 ha) and Mwanza (791,518 ha). Additionally, Dodoma had the lowest proportion of area under irrigation (0.07%) after Mtwara (1.16%) and Lindi (1.08%).

Dodoma is one of the regions with the highest percentage of households reporting selling crops and had the first highest proportion of households receiving extension advice (91.3%) and together with Kilimanjaro had the second highest proportion of households with soil erosion (22.57%).

### **3.3 Mwanza**

Mwanza is one of the regions with the second largest concentration of households engaged in agriculture. Mwanza region had the second largest area planted with cotton (108,329 ha or 18.8%) followed by Tabora (57,901 ha or 10.1%).

The region had the fourth highest percentage of households employing oxen/bulls in land cultivation (7.2%). Also the region had 25,216 households using irrigation. Furthermore, it is one of the regions that had the largest area planted without improved seeds in the short rains than during the long rains, the second largest planted area without fertilizer (791,518 ha) and the fourth highest percent of households that sold crops.

### **3.4 Tabora**

Tabora region experienced less acute land scarcity with the total utilizable land remaining slightly above the 2002/03 national average. Also, together with Mtwara, Lindi, and Ruvuma regions had at least 50% or slightly more of the households reported land sufficiency while all other regions reported land sufficiency below 50%.

Tabora region had the largest number of households producing tobacco (33,987 or 45.4%), the largest planted area (31,431 ha or 48.7%) and accounted for the largest production of the crop (36,056 tons or 51.1%). Also, it had the third largest area planted with cotton (57,901 ha or 10.1%)

Also, Tabora 25,601 households using irrigation more than Shinyanga (26,541), and Mwanza (25,216) and had the third largest area planted with fertilizer (53,339 ha) after Shinyanga (67,439 ha) and Singida (54,586 ha).

### **3.5 Mbeya**

Mbeya region had the third highest proportion of land under cultivation (9.97%) after Kilimanjaro (15.68%). However, based on percent area planted, Mbeya had the highest percent (9.97%), followed by Zanzibar (7.23), and Tanga (4.67%).

The region had the third largest number of households growing coffee (79,175). Based on percentage of area planted with coffee and average planted area per households, the leading regions are Mbeya, Ruvuma, and Arusha.

Also, it had the second largest area planted with irrigation (33,418 ha) after Kilimanjaro (36,607 ha) as well as the second largest number of households using irrigation (47,568) after Kilimanjaro (75,736). Besides, Mbeya had the second highest percentage of households using oxen/bulls in land cultivation (8.3%) after Shinyanga (8.8%) but higher than Kagera (7.3%) and Mwanza (7.2%). Also, it had the first largest area planted with inorganic fertilizer (131,208 ha).

Furthermore, it is one of the regions leading in terms of households reporting selling of crops and had the sixth highest proportion of households receiving extension advice (78%) and the second largest number of planted trees (27,777) after Iringa (62,027).

### **3.6 Ruvuma**

Ruvuma region had at least 50% or slightly more of the households reported land sufficiency while all other regions reporting land sufficiency below 50%.

Ruvuma had the third largest area planted with cashewnuts (74,368, 21.49%). However, in terms of average planted area per household Ruvuma (1.750 ha), overtook both Lindi (1.213 ha) and Mtwara (1.039 ha). Furthermore, it had the fifth largest planted area with tobacco (4,183 ha or 6.5%).

The region had the fourth largest number of households growing coffee (31,185). However, based on percent area planted with coffee and average planted area per households, Ruvuma was one of the leading regions, which included Mbeya and Arusha.

Besides, Ruvuma had a total of 20,354 households using irrigation while figures for other regions were 27,765 (Morogoro), 24,912(Tanga), 25,601(Tabora), 26,5419Shinyanga), and 25,216 (Mwanza).Furthermore, Ruvuma had the second largest area planted with inorganic fertilizer (83,208 ha) after Mbeya region (131,208 ha).

### **3.7 Iringa**

Iringa region had the largest number of households involved in wheat production (40,749, 56 %) and the largest actual planted area (17,562 ha, 41.1%). Iringa had the third highest proportion of area planted with cabbage (13.7%, 790 ha) after Kagera (19% or 1,094 ha) and Tanga (16.8% or 964 ha) and the sixth largest planted area with beans (56,152 ha, 7.5%).

It had the third largest number of households using irrigation (32,689) and the fourth highest proportion of households receiving extension advice (80.45) after Dodoma (91.3%) followed by Kilimanjaro (83.2%), and Manyara (82%).

The region also had the fourth highest proportion of households with soil erosion (14.69%) and the first largest number of planted trees (62,027) followed by Mbeya (27,777) and Kagera (27,767).

### **3.8 Kagera**

Kagera region had large concentration of households engaged in agriculture falling in the range of 400 -500,000 households.

Kagera had the first largest number of households growing coffee (223,137), followed by Kilimanjaro (104,061) and Mbeya (79,175) and had the first highest percentage of households growing banana (38.55%).

Also, it had the third highest percentage of households using oxen/bulls in land cultivation (7.3%) after Shinyanga (8.8%) and Mbeya (8.3%) and higher than Mwanza (7.2%). Besides, Kagera is

one of the regions with the highest percentage of farming households involved in selling crops and had the first largest number of households without planted trees (937,450).

### **3.9 Tanga**

Tanga and other three regions, namely Dodoma, Iringa, and Mwanza had 300-400,000 concentration of households engaged in agriculture. Besides, Tanga had the second largest planted area with permanent/annual mix (39,643 ha) after Mtwara (104,451 ha) and the third largest area planted with coconuts (28,118 ha, 23.4%).

Furthermore, Tanga had the third largest area planted with sugarcane (1,750 ha, 6.88%). In addition, Tanga is one of the regions with the highest percent of households reporting selling of crops.

### **3.10 Mtwara**

Mtwara had at least 50% or slightly more of the households reporting land sufficiency while all other regions reported land sufficiency below 50%. Mtwara had the third highest percentage of area planted with permanent crops (7%) after Kagera (16%) and Kilimanjaro (9%). More specifically, it had the first largest planted area with cashewnuts (185,179 ha, 34.84%).

### **3.11 Morogoro**

Morogoro region planted a little over half of the total area under sugarcane (12,215 ha, 50.39%), followed by Ruvuma and Tanga each with 1,671 ha (6.18%) planted with the crop. On a regional basis, Morogoro had the largest percent of land (31%) planted with paddy followed by Zanzibar with 22.2%. All other regions had less than 10% of the land planted with paddy.

The region had the first largest area planted with tomatoes (2,442 ha, 9.2%) followed by Kagera (2,386 ha, 9%), Tanga (2,326 ha, 8.7%), Mwanza (2,235 ha, 8.4%), Iringa (2,223 ha, 8.4%), Mbeya (1,786 ha, 6.7%). Also, it is one of the regions (including Kigoma, Kagera, Mwanza, and Mara) with larger areas planted without improved seed during the short rains than during the long rains. In addition, it had 26,765 households using irrigation while figures in other regions were 24,912 (Tanga), 20,354 (Ruvuma), 25,601 (Tabora), 26,541 (Shinyanga), and 25,216 (Mwanza).

Furthermore, the region had more than 5% of the area under irrigation (7.96%) and is one of the regions with the highest percent of households reporting selling of crops.

### **3.12 Rukwa**

Rukwa region had the second largest area planted with tobacco (9,572 ha or 14.8%), followed by Mbeya (6,328 ha or 9.8%), Shinyanga (5,949 ha or 9.2%), Ruvuma (4,183 ha or 6.5%) and Singida (2,303 ha or 3.6%).

Besides, Rukwa had the highest area planted to paddy per household (1.34 ha), the second highest average yield of 2.74 tons/ha and the highest yield of wheat (1.94 tons/ha), followed by Manyara (1.47 tons/ha) and Arusha (1.17 tons/ha). Furthermore, Rukwa region had the largest area planted with finger millet (10,999 ha) and produced the largest quantity harvested (10,770 tons). It also had the third highest percent of area planted with groundnuts (6.9%) after Tabora (11.6%) and Dodoma (9.7%)

Moreover, the region had the fourth largest area of area per groundnut growing household (0.55 ha) after Dodoma (0.64 ha), Manyara (0.59 ha), and Shinyanga (0.56 ha) and only 48.8% of households reported receiving extension advice, which however was higher than both (33.6%) and Lindi (40.8%).

### **3.13 Singida**

Singida region experienced less acute land scarcity with the total utilizable land remained slightly above the 2002/03 national average. Singida had the lowest percent area under permanent crops (2%) and the sixth largest planted area with tobacco (2,303 ha or 3.6%).

Singida region had the second largest area planted with sorghum (97,513 ha, 17.2%) after Shinyanga (98,145 ha or 17.3%). Also, Singida region accounted for 17.8% of the onion planted area (1,564 ha) followed by Mbeya (10.3% of the planted area of 907 ha).

Furthermore, Singida had the second largest area planted with organic fertilizer (54,586 ha) after Shinyanga (67,439 ha).

### 3.14 Mara

Mara region experienced most acute land scarcity as more than 80% of the households reported to have land insufficiency. Mara recorded the highest yield of beans (1.5 tons/ha) and had the highest number of households (28,158, 22.9%) of the total households engaged in the production of finger millet.

The region recorded the fourth largest area planted with sweet potatoes (18,127 ha, 8.3%) after Shinyanga (69,145ha 31.7%), Mwanza (23.3% or 50,736 ha) and Tabora (18,613 ha, 8.5%). Moreover, Mara is one of the five regions with large areas planted without improved seed during the short rains than during the long rains.

### 3.15 Manyara

Manyara region experienced most acute land scarcity with more than 80% of households complaining land insufficiency. Manyara had the highest area planted to maize per household (1.36 ha), which was just slightly higher than in Dodoma (1.3 ha). Besides, it had the largest land area for wheat production per household (2 ha) and the second highest yield of wheat (1.47 tons/ha) after Rukwa region (1.94 tons/ha).

The region is the leading producer of pigeon peas (38,407 ha), followed by Lindi (15,869 ha), and Dodoma (13,156 ha). Also, it had the largest number of households involved in pigeon pea production (46,171), followed by Lindi (40,329), and Dodoma (24,329).

Furthermore, Manyara had the third highest proportion of households receiving extension advice (8,250) after Dodoma (91.3%) and Kilimanjaro (83.2%) and had the second highest proportion of households with soil erosion (21.78%).

### 3.16 Lindi

Lindi is one of the regions (including Mtwara, Ruvuma and Tabora regions) with at least 50% or slightly more of the households reporting land sufficiency while all other regions reported land sufficiency below 50%.

Lindi had the second largest area planted with coconuts (23,755 ha, 19.85%) after Pwani (43,215 ha, 36.1%) and the second largest number of households involved in pigeon pea production (40,405). Besides, it had the third largest area planted using fungicides (31,071 ha) after Mtwara (51,478 ha) and Mbeya (41,487 ha).

Also, Lindi had only 1.08% of the planted area under irrigation, which is lower than Mtwara (1.16%) but higher than Dodoma which had the lowest proportion (0.07%). Furthermore, Lindi had the lowest percentage of households having access to extension advice (40.8%) but better than Zanzibar (33.6%).

### **3.17 Kigoma**

Kigoma has the 14<sup>th</sup> largest number of agricultural households in the country and a population density of 0.6 household/sq.km. The region has a total usable land area of 403,580 hectares under crop production with an average land utilization rate of 83.7%. About 70% of the households are crop growing households. However, about 63% of the households reported land insufficiency. The land area under crop production is mostly under temporary mono crops with an average planted area per household of 0.8 ha in the short rain season and 0.6 ha in the long rain season.

Kigoma is one of the least important regions for cereals production accounting for only 1.9% of the cereal planted area in the country and maize was the most important cereal planted. Very small areas of paddy and sorghum are grown. Kigoma has the fourth largest planted area with beans which occupy about 21.7% of the total planted area of the region and has the 10<sup>th</sup> largest area planted with groundnut. The production of vegetables and cash crop is relatively unimportant compared to other regions but the dominant crop in this category is tomato.

The major permanent crop in Kigoma is oil palm and the region is leading with 80% of the total planted area of the crop in Tanzania. The region also has the 7<sup>th</sup> largest planted area in banana and 5<sup>th</sup> in coffee with very small planted areas of the other permanent crops such as mango, coconut and orange. The use of fertilizer is minimal as the region is among the five regions having the smallest areas applied with organic fertilizer and is also ranked low in the use of inorganic fertilizer. Pesticide use is limited to mostly fungicides.

Relative to other regions, Kigoma has a small planted area with irrigation for which the main source of water is from rivers and the method of obtaining water is predominantly using buckets/watering cans followed by gravity. In the region, about 60.5% of the households reported having received crop extension services. All households store crops particularly maize and about 40% of the households report selling crops.

Land preparation and other farm operations is mostly by hand with minimal use of farm animals or mechanized equipment. About 7.8% of households reported having soil erosion problems and just about 10% of the households have planted trees.

### **3.18 Pwani**

Pwani has the fourth smallest number of agricultural households (174,523) in the country. The region has a total usable land area of 357,377 ha with an average land utilization rate of 91%. About 83.9% of the households are crop growing households. However, only about 31% of the households reported land insufficiency.

The land area under crop production is mostly under temporary mono crops and permanent mixed crops. The average planted area per household is 0.7 ha in the short rain season and 0.9 ha in the long rain season.

Pwani is one of the least important regions for cereals production accounting for only 1.9% of the cereal planted area in the country. Maize was the most important cereal planted on about 40% of the planted area in the region followed by paddy for which Pwani is ranked 8th in terms of planted area. Sweet potato is the main root and tuber crop and cowpea is the major pulse crop in the region. The production of vegetables and cash crop is relatively important compared to other regions and the dominant crops in this category were okra, tomato and water melon.

Pwani has about 84.7% of the planted area under permanent crops. The major permanent crop in the region is coconut for which the region is leading with about 30% of the total planted area followed by cashewnut for which the region has the fourth largest planted area equivalent to about 13% of the total area under cashew. Other important permanent crops in the region are mango, banana and orange.

Pwani is one of the regions with minimal use of improved seed, fertilizers (both organic and inorganic) but is ranked fifth in the use of fungicides which is the most commonly used pesticide. Relative to other regions, Pwani has the fourth smallest area planted with irrigation for which the main source of water is from rivers and the method of obtaining water is predominantly using buckets/watering cans followed by gravity.

Extension services reached about 67.5% of the agriculture households in the region and all households stored crops particularly maize. About 20% of the households report selling crops. Land preparation and other farm operations is mostly by hand with minimal use of farm animals or mechanized equipment. Soil erosion problems were minimal reported by less than one percent of the households and very few households have planted trees, other than tree crops.

### **3.19 Kilimanjaro**

Kilimanjaro region has 242,708 agricultural households, the 11<sup>th</sup> largest in the country. The region has the second smallest usable land area of 238,142 ha with an average land utilization rate of 92%. The majority of the households (75%) engaged in mixed crop production and livestock keeping. The region experiences land scarcity reported by 78% of the households.

The land area under crop production is mostly under temporary mono crops followed by temporary mixed crops and permanent crops. The average planted area per household is 0.5 ha in the short rain season and 0.6 ha in the long rain season. The region is ranked low in cereal production. The area planted with cereals in the region is about 2% of the cereal planted area in the country. The major cereals planted are maize and paddy, but the former occupies the largest share equivalent to about 36 times the area planted with paddy.

Amongst other annual crops, beans are the most important among pulses, and relatively small areas are planted with sweet potato, amongst the roots and tuber crops. The production of vegetables is significant in the region the dominant vegetable crops produced tomato, onion and cabbage. Coffee is the major permanent crop in the region. Kilimanjaro has the largest proportion of land, than any other region, planted with coffee (10.3% of the planted area in the region) and contributing 18% of the national land planted with coffee in third position after Mbeya and Kagera regions.

Other important permanent crops in the region are banana for which the region is second only after Kagera accounting for 15.7% of national land area planted with banan and sugarcane, for which Kilimanjaro is the 9<sup>th</sup> producing region in the country. Other permanent crops planted to a limited extent in the region are pigeon pea, coconut and orange.

Kilimanjaro is the second region after Mwanza in the use of improved seeds. It is also in the top five regions in the use of inorganic fertilizers and in the top eight regions using organic fertilizers. However, the region is also ranked sixth in the use of fungicides and fifth in the use of insecticides on permanent crops. Irrigation is practiced by the largest number of households (75,736) and the region has the largest planted area under irrigation (36,607 ha). The region leads all other regions in the country in using the river and tap water as the main sources of water. The most common method of obtaining water is by gravity followed by hand buckets/watering.

Extension serviced reached a large proportion of the agricultural households (83%) in the region. Crops are stored by all households particularly maize, in traditional structures and or manila bags. About 30% of the households participating in the sale of food crops. Land preparation and other farm operations is mostly by hand with very few households using oxen. However, it is one of the few regions in the country that has some cultivation by tractor or power tiller. The region has the highest proportion of households with soil erosion control and water harvesting facilities (22.6%) and the region has the sixth largest area planted with trees.

### **3.20 Arusha**

The region has 205,547 agricultural households and the third smallest usable land area (279,221 ha), after Dar es Salaam and Arusha regions. The average land utilization rate of 93%. Two thirds (66%) of the households produce crops and also keep livestock. About 49% of the households report scarcity of land in the region. It is one of nine regions with households that are purely pastoralist.

Almost all land made available to smallholders is utilized. The region has short and long rainy seasons. The average planted area per household is 0.8 ha in the short rain season and 1.1 ha in the long rain season. Annual cropping is the most important, with the greatest proportion of the land planted with temporary mixed crops followed by temporary mono crops. However a limited level of perennial crops all planted as a mixture with annuals is also prevalent.

Arusha has one of the smallest planted areas of maize and paddy but one of a handful of regions where wheat and barley are produced. But the region is ranked low in the production of sweet potatoes and groundnut. The region is ranked seventh in the area planted with beans and is an important region in vegetable production and has the third largest, after Singida and Mbeya, area planted with onion; the fourth largest area planted with cabbage and the seventh largest area planted with tomato.

A relatively small area is planted with permanent crops in the region mostly pigeon pea, coffee and banana and sugarcane. Improved seed is used for planting in both rain seasons in the region though the land area planted with such seed in the long rain season is twice as big as in the short rain season. The region is ranked seventh and eighth in the use of improved seed during short and long rain seasons, respectively.

Arusha region has the second smallest total area, after Kilimanjaro, applied with fertilizers with small differences in the area applied with either organic or inorganic fertilizer. The use of pesticides on permanent crops was rather limited compared to other regions though all major pesticides; insecticides, fungicides and herbicides were used. The region has the fifth largest planted area under irrigation and the majority of households depend on the river to source water followed by tap water. The most common method of obtaining water is by gravity

Extension services reached 80% of the target households in the region and all households stored crops particularly maize. Stored crops were secured in traditional structures and or manila bags and about 25% of the households participating in the sale of food crops.

Land preparation and other farm operations is mostly by hand-operated tools with limited use of drought animals and power tillers. Soil erosion is not widespread in the region hence soil erosion control structures are limited and the region has the seventh smallest area planted with trees.

### **3.21 Dar es Salaam**

The region has 35,160 agricultural households. The usable land area of Dar es Salaam region is 44,253 hectares which is also the smallest amongst all regions in the country, with a land utilization average of 88%. About 31% of the households report land available for planting as insufficient.

The agricultural households in the region are mostly crop-only households (62%) with another 29.3% producing crops and keeping livestock and. Dar es salaam is also one of nine regions with households that are purely pastoralist. The largest proportion of the planted area is under temporal annual crops with followed by permanent mixed crops and permanent annual crops mixtures. The region has short and long rainy seasons. The average planted area per household is 0.4 ha in the short rain season and 0.6 ha in the long rain season.

Dar es Salaam has the smallest planted area with cereals in the country, of which the planted area for maize is slightly larger than four times that of rice. However, all other cereals and beans are virtually absent. The region has is ranked intermediate in the production of Sweet potato and has a very small area planted with groundnut. Dar es Salaam region is not important for vegetables production. The region has very small planted areas of tomato, onion and cabbage. The two most important permanent crops in the region are coconuts and oranges. Others which occupy relatively smaller areas are mango, oil palm and pigeon peas. The use of improved seed is limited to less than ten percent of the planted area in both seasons and use of organic and inorganic fertilizers is equally low. The region is in the top eight regions for use of pesticides on permanent crops and generally the use of insecticides and fungicides was more prevalent compared to the use of herbicides.

Dar es Salaam region has one of the smallest irrigated areas in the country, the region is ranked in the bottom six. The majority of households applying irrigation depend on the river to source water followed by canal and the most common method of obtaining water is by hand bucket. Extension services reached about 74% of the target households in the region. All households stored crops particularly maize using traditional structures and or manila bags. About 5% of the households reported selling food crops.

Land preparation and other farm operations is mostly by hand-operated tools with limited use of mechanized equipment particularly tractor and power tiller. Soil erosion problems are minimal and tree planting is limited to very few households.

## Definition and working page for page 1

### General Definitions

**Who is a Smallholder /Small Scale farmer?**

Should have one or more of the following: in the 2007/08 farming season had one or more cultivated and planted farms. The farm land may either be owned, rented, borrowed. The farmer may also be raising 1 and 50 head of cattle, and/or between 5 and 100 head of sheep/Goats/Pigs, and/or between 50 and 1000

**Household:** A group of people who occupy the whole of part one or more housing units and makes joint provision for food and/or other household items. Usually such a group comprises a husband, wife, and their children. Other relatives may be members of the household if they happen to live and get food provisions from the same household. People who live together and eat from the same pot may be considered as members of the same household even if they stay in separate dwellings. An individual who lives and eat alone is considered as an independent household.

**Household Head:** A person who is acknowledged by all other members of the household either by virtue of his age or standing in the household as the head. He/she should be a permanent resident of the house and he/she is the main person responsible for decision making regarding use of household resources..

**Agricultural Holding:** This is an economic unit of agricultural production under single management. This unit may have been grown various crops. For the purpose of the survey, the agricultural holdings are restricted to those which meet one of the following conditions:

- Having or operated at least 25 sq meter of arable land
- Own or keep at least one head of cattle or five goats/sheep/five pigs or fifty chicken/ducks/turkeys during the agricultural year 2007/08 (from October 2007 to September 2008).

### Question Specific Definitions:

#### Type of Agriculture holding Codes (Q2.1):

**Crops only:** A holding is referred to be a crop only holding if it has cultivated at least one piece of land. This also applies to all households owning or have kept livestock whose number does not qualify such households to be an agricultural holding (No cattle, less than 5 goats/sheep/pigs, less than 50 chickens/turkeys/rabbits).

**Livestock only:** A holding is referred to be a livestock only holding if it has exercised livestock husbandry only during the 2007/08 agricultural year.

#### NOTE

For agricultural holding only and pastoralist holding only; the number of livestock should be at least one head of cattle, not less than five goats/sheep/pigs, not less than 50 chickens /turkeys /rabbits. This also applies to households having or operated less than 25 sq meter of cultivated land (which does not qualify the household to be considered as agricultural holding) but has the number of livestock that makes the holding qualifies to be considered as livestock holding.

**Pastoralist holding:** This refers to a household which practices livestock production as its major income generating activity and a means of subsistence, but moves from one place to another searching for water and pasture for the livestock. This movement usually involves long distances and in many cases the whole household unit moves with the livestock and they have no permanent place of residence.

**Both crops and livestock:** A holding is referred to be a both crops and livestock if it has cultivated a piece of land equal or exceeding 25 sq meter and if such households have own or kept livestock whose number qualify such household be considered as an agricultural holding.

### Procedures for questions:

#### Q 2.1 Type of agriculture household/holding

Using the options under the question classify the type of agriculture household/holding

Note: If the household had an acre of crops and raised 40 chickens during 2007/08, it is classified as 'Crops only' as the number of chickens does not qualify the household as a livestock holding.

**Definition and working page for page 2**

---

**Question Specific Definitions:****Relation to head (Col 2):**

**Household Head:** A person who is acknowledged by all other members of the household either by virtue of their age or standing as the household head.

**Read and Write (Col 8)****Any other language: Must be a written language.**

For someone who can read and write in Kiswahili and any other language apart from English, the correct code is 1. For one who can read and write in English and any other language apart from Kiswahili the correct code is 2. Code 4 should only be used for any other language which is not English or Kiswahili.

**Education Level Reached (Col 10):**

Ask the respondent the highest educational level reached. This aims at establishing whether at the time of enumeration the member of the household is studying has completed or has never studied. Make further enquiry for the level of education reached for those who have completed studies. Establish if the member had attained any training after graduation for the purposes for completing column number 9. For those who still continue attending studies during the period of this survey, establish their learning stage. For instance for a household member who studied up to Standard Three but did not complete his/her education at this level, then his/her highest education level reached is Standard Two. For those indicated under code 3 (not studied) in column 8 should be marked code 99 (Not applicable) in column 9.

**Section 3.0 Note**

Make sure that you define the hh proper to ensure that all the members of the hh are included. Ensure that you stress that the hh is not just the hh heads direct family and that it includes other people living and eating together with the family.

If you notice that the hh is large or you see many people around the hh and you have been given a smaller number of the hh members, make further enquiries until you are sure that you have captured all the hh members.

**Section 3.0 Household information.**

- ii) For each household member complete columns 1, 2, 3 and 3  
After completing columns 1, 2, 3 and 3 for each household member, go back to the first household member and complete the remaining columns for that member.
- iii) Repeat step 2 for the rest of the household members.

 Non paid household member (off-farm activities) .....10.  
 Unemployed but available for work ....11  
 Unemployed but unavailable for work..12  
 House mother .....13  
 Student .....14  
 Unable to work too old, too young, retired, disabled, child 15  
 Others (specify) .....98

**Off-farm Income (Col 13)**

These are income made from activities NOT on the HH's farming activities. This can be from formal employment (e.g. in government etc.), temporary jobs, casual labourers and income generation activity and includes working for cash on other people's farms.

Indicate whether each member was involved in an off farm income generating activity during 2007/08

### Definitions and working page for page 3

#### Definitions for Key Specific Questions

##### Section 4.1 – Land Access/Ownership

These are areas that were used by the households for the 2007/08 farming season

**Lease/Certificate of Ownership:** Area under lease/certificate of ownership refers to the areas which were issued by the government. The household possesses government issued leasehold title or certificate of ownership. The land will normally be officially surveyed and boundaries marked. This includes leased land bought from others where the lease/certificate of ownership has been transferred.

**Customary Law:** This refers to the land which the household does not have an official government but its right of use is granted by the traditional leaders.

**Bought:** This refers to the areas of customary land that has been bought from others. This land does not have an official title and therefore is not leasehold.

**Rented from others:** Land rented from others for cash or for a fixed amount in crop produce (e.g. fixed number of bags at harvest).

**Borrowed:** use granted by land owner free of charge. Land owner can either be a lease holder or has right of access through customary law.

**Share cropping:** where the household is permitted to use land which is then paid for from a percentage of the harvested crop

#### Section 4.2 Land Use

Temporary crops: are sown and harvested during the same agricultural year

Permanent crops: are crops once sown or planted last for some years and need not to be replanted after each annual harvest.

Permanent crops /mixed crops: This is a mixture of permanent and seasonal crops. The two crops can either be randomly planted together or in a particular pattern e; for example intercropping (1 row of maize and 1 row of beans). A field that has been divided into plots for different crops is not mixed).

This is further subdivided into:

Mixture of Permanent crops – two or more permanent crops grown together

Mixture of Permanent and Temporary crops – permanent crop and annual crop together

Mixture of Temporary crops– two or more temporary, annual crops grown together

**Pasture land:** this is an area of owned/allocated land which is set aside for livestock grazing. It can be improved pasture where the farmer has planted grass, applied fertilized or where other means have been applied to improve the pasture. Or it can be natural pasture.

**Natural Bush:** Land which has naturally grown shrubs and trees and is considered productive but is not utilized for farming or livestock production.

### Overview to section 4

#### Overview to section 4

##### Section 4.0: Preliminary note

##### Land Access/Ownership

Land access/ownership refers to the area utilized by the members of the household. This does not include communal land where the resources are shared between household members. It does not include official communal land that the household has sole access to for example a plot for crop farming in the communal area.

### Procedures for questions

#### Section 4.0 – Land Ownership

1. Ask the respondent if he knows the total areas of land the household has sole access to. If he knows make a note in the calculation space
2. Ask the respondent the area of the different land ownership categories the household has sole access to (Q4.1, 1 to 4.1.7) and record in the appropriate spaces.
3. Add up the area of the different categories of land and compare it with the total area obtained in step 1 (if the respondent provided the information)
4. If the total area is different find out which one is correct and make

#### Section 4.2: Land Use

1. Ask the respondent the area of the different land use categories the household has sole access to (Q4.2.1 to 4.2.12) and record in the appropriate spaces.
2. Add up the area of the different categories of land and compare it with the total area obtained in section 4.0. The total area should be the same.
3. If the total area is different find out which one is correct and make amendments where appropriate.

**Planted Area:** Area in acre the household was able to plant

**Harvested Area:** Area in acre the household was able to harvest a large portion of harvests. this is the same as the area planted minus the area that was destroyed by floods/ pests /

**Temporary/Annual Crops**  
Crops planted and harvested within 12 months after which time the plants die. Most annual crops are planted and harvested on a seasonal base.

**Cash crop codes:**  
Code Crop  
50 Cotton  
51 Tobacco  
53 Payrethrum  
62 Jute  
19 Seaweed

**Crop Codes(Cereal / Tubers/ Roots):**  
Code Crop  
11 Maize  
12 Paddy  
13 Sorghum  
14 Buirush Millet  
15 Finger Millet  
16 Wheat  
17 Barley  
22 Sweet Potatoes  
23 Irish Potatoes  
24 Yams  
25 Cocoyams  
26 Onions  
27 Ginger

**Vegetable Codes:**  
Code Crop  
86 Cabbage  
87 Tomatoes  
88 Spinach  
89 Carrot  
90 Chillies  
91 Amaranths  
92 Pumpkin  
93 Cucumber  
94 Egg plant  
95 Water mellow  
96 Cauliflower  
06 Mellion  
05 nyanyachungu  
02 Oca  
03 Radish  
01 Green Beans  
04 Bizari

**Crop Codes Legumes and Oil Code Crop**  
31 Beans  
32 Cowpeas  
33 Green Gram  
34 Chick Peas  
35 Dengu  
36 Bambara nuts  
37 Njegere  
41 Sun flower  
42 Simsim  
43 Ground uts  
47 Soya beans  
48 Caster Seed

**Instructions for calculating the area of mixed crops in a mixture**

**A.** If the mixed crop is mixed annual ly only enter the total area of the field in the remaining area under temporary Crop and go to step one of these instructions.

**B.** If the mixed crop is mixed permanent and annual try to work tyhe percent age taken by the different crops and calculate the area of annual crops outlined in step 1. Otherwise use the number of trees method to calculate the area of annula crops in the mix.

**C:** Number of trees method to calculate annual crop areas in a permanent-annual crop mix.:

(i) List each of the permanent crop in column b and enter the ground area per acre for each permanent crop ( from instrutions for page 8) in column d.

(ii) Enter the number of permanent trees in the mix in column e as will be provided to you by the respondent

(iii) Calculate the area occpied by each crop by multiplying column d and column e and sum up these to obatin the total area of permanent crops in the mix.

iv) To obatin the area for temporary crops , subtract (-) the area fro permanent crops from thne total area of crop mix and enter the result in in the total area under temporary crops.

(v) Proceed to step 1 to calculate the area under each temporary crop.

1. Enter the name of each temporary crop in tyhe crop mix and estimate percentages of each crop.

2. Using the percentage for each crop, calculate the are for each crop from the remaining area under temporary crop.

3. After completing the excrise for all the fields, sum the area of each crop in tyhe mix plus any monocrops and uenter the totals in section 5.1.1 Column 3.

4. Once the quantity harvested is obtained , calculate the yields (metric tonnes/acre) and compare the figures with the norms given in the crops code box. If there is significantly difference, check the area and the amount harvested..

[illegible]

## Definitions and working page for page 5

**Storage (Col. 30, Q 5.1.1):**

- **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
- **Improved Traditionally made structures:** The design of traditional storagesrutures improved through modern technology.

**Marketing Challenges Q 5.1.1 Col. 33:**

- **Farmers' Association:** Village farmers who came together and started an association for the puporses of purchasing inputs/selling/storage of crops aiming at fetching better prices.
- **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
- **Government Regulatory laws for crops marketing:** Government instituted laws for regulatina transpotation and selling of crops.

**Inputs (Q 5.1.1)**

- Farm Yard Manure:** An organics fertliser made on farm from animal dung. .
- Compost:** An organic fertiliser made on farm from decomposed plant materials.
- Insecticides:** This is the chemical usde in protecting plants or killing pests.
- Fungicides:** Protects plants from fungi attack.
- Herbicide:** Chemicals used to control or kills weeds.
- Improved seeds:** Scientifically attested to be suitable for agricultural use.

## Questions specific definitions

**Q 5.1.1. Instructions on crops storage:**

1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
2. For the listed crops give explanations on storage.

**Crops storage is keeping/reserving crops in a container or a special place for future use.**

**Q 5.1.1 Col 31**

1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

**Working area/calculation space**

**Definitions and working page for page 6**

## Definitions and working page for page 9

**Storage (Col. 33, Q 5.3.1):**

- **Traditionally Made structures:** The design of storage structures villagers have inherited from forefathers .
- **Improved Traditionally made structures:** The design of traditional storagesructures improved through modern technology.

**Marketing Challenges Q 5.3.1 Col. 35:**

- **Farmers' Association:** Village farmers who came together and started an association for the puporses of purchasing inputs/selling/storage of crops aiming at fetching better prices.
- **Cooperative Union:** A large inter-village/community set up in the district/ region or at national level for providing inputs, markets and storage of farmers' crops.
- **Government Regulatory laws for crops marketing:** Government instituted laws for regulating transportation and selling of crops.

**Inputs (Q 5.3.1)**

- Farm Yard Manure:** An organics fertliser made on farm from animal dung. .
- Compost:** An organic fertiliser made on farm from decomposed plant materials.
- Insecticides:** This is the chemical usde in protecting plants or killing pests.
- Fungicides:** Protects plants from fungi attack.
- Herbicide:** Chemicals used to control or kills weeds.
- Improved seeds:** Scientifically attested to be suitable for agricultural use.

## Questions specific definitions

**Q 5.3.1. Instructions on crops storage:**

1. For the listed crops establish whether or not the household stored crops for 2007/2008 agricultural season.
2. For the listed crops give explanations on storage.

**Q 5.3.1 Col 35**

1. For each of crops listed indicate major marketing problems for 2007/2008 agricultural season.

**Working area/calculation space**

### Definitions and working page for page 10

#### Investment in agriculture

##### Investment activities:

Investment activities refer to medium to long term farm development structures and projects. This can be irrigation structures, erosion control and water harvesting structures or other permanent or semi-permanent investment made on the land that the household owns.

#### Irrigated farming: Section 6.5:

**Source of irrigation water** (Col 1): The main source of the water used for irrigation.

**Method of obtaining water** (Col 2): The mechanism by which the water is extracted from the source

**Irrigatable area** (Col 3): The area the irrigation system is designed to cover in acreage

Area of irrigated land during the 2007/08 (Col 5): Area of land under irrigation during the 2007/08 agricultural year. This is the actual area and NOT the cumulative areas recultivated in 2 or more cropping seasons.

#### Farm Implements (Col. 1):

**Machette** : Include all implements use in tree cutting namely cicle, etc.

**Sprinkler**: The pump carried on the back or a hand used water pump

**Hand used small tractor**: A small tractor used in cultivation while the user walks on foot (see photo).

#### Section 6.2 Use of draft animals

Animals used in agricultural activities by the household during 2007/08 agricultural season.

**Castrated Bulls**: Castrated oxen meant for use in agricultural production.  
**Uncastrated Bulls**: mature bulls used for garicultrual activities but are not castrated.

**Cow**: Farmers also use mature female cattle in agricultural activities due to shortage of bulls

**Donkey**: Mature Male or female donekys are also used for agricultural production.

#### Q 6.5 Irrigation.

1. If a household uses irrigated farming give explanations aon source and method of obatining water. .

2. See Col 10, Q. 5.1.1 and 5.2.1 and Col 12, Q 5.3.1 to see if irrigation was applied to any crop.

#### Farm implements, Q 6.1:

1. Collumn 2 Indicate whether or not inputs were used

2. Complete collumn 3 by entering the number of inputs used.

#### Farm inputs: Sections 6.3 and 6.4

1. Collumn 2 Indicate whether or not inputs were used.

2. Compelte collumn 3 by indicating where the inouts were obatined and collumn 4 by indicating the distance from where the inputs were obatined

**Compost**: An organic fertiliser made on farm from decomposed plant materials.

**Insecticides**: This is the chemical usde in protecting plants or killing pests.

**Fungicides**: Protects plants from fungi attack.

**Herbicide**: Chemicals used to control or kills weeds.

**Improved seeds**: Scientifically attested to be suitable for agricultural use.

**Definitions and working page for page 11**
**Q 6.6**
**The type of erosion control/Water harvesting (Col 1)**

**Terraces:** Structures constructed on mountain slopes to provide flat terrain for crop planting.

**Erosion control bunds:** these are bunks of earth/stones built perpendicular to the slope to slow down the speed of water and thus preventing soil erosion. Its differs from terraces in that the soils on these banks are not at ground level .

**Gabions:** A box like structure made of wire and filled with large stones to prevent gully erosion.

**Sand bags:** Are used in controlling and preventing gully erosion  
**Tree belt/wind breaks:** Trees planted against the wind direction for breaking wind speed..

**Section 7.0 Acces to credit for crop or livestock production**

Credit refers to something provided in cash or in kind (such as farm inputs, machines, livestock and other things) for crop or livestock production. The value of the credit must be repaid back to the lender. An Interest may or may not be attached to the value of the credit

The credit may be repaid either in cash or through farm produce to be harvested .

In this question the enumerator is at liberty to inquire up to three sources of credit where the farmer accessed credit from more than one source.

**Section 8.0 Agricultural Extension Services**

**Agricultural Extension Services:** Refers to educational services provided to farmers by exetsion officers for the purposes of increasing crop and livestock production.

**Share-cropping:** Refers to farming where smallholder / Smallscale farmer enters into an agreement with large scale farmer where the former sells produce to the latter in exchange of provisions of farm inputs and the like. .

**Contract farming Farming:** Farming agreement entered between smallscale and large scale farmerswith regards to markets of farm produce and provision of farm inputs

**Q 6.6 Number of water harvestin structures and year of construction**

1. The number water haversting structures refers to the number of wokring / maintained structures and does not include derelict or iireparable structures.

2. Year of construction refers to the year in which the structures were built, and not the year the structures were last repaired.The year should be written in figures e.g. 1998, 2006.

**Section 7.0 Source of agriculture credit**

If tghe farmer obtained credit from more than one source the use the code from the list provided. Start with the main source of credit in Section "7.1.1".a

**Section 8.0 Agricultural extension services**

1. Ask if the household did receive agricultural extension services during 2007/08 agricultural season from the respondents listed in collumn 1, then enter column 2.

2. Complete all columns for every extension officer.

<b>6.6 SOIL EROSION</b>										<b>Identification</b> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>									
6.6.1 Did the household experience soil erosion during 2007/08 agriculture year?										<input type="checkbox"/>									
(Yes=1, No=2)																			
6.6.2 Did the household applied any methods for erosion contro/water harvesting during 2007/08 agricultural year?										<input type="checkbox"/>									
(Yes=1, No =2) (If the answer is No, Proceed to Section 7.0)																			
Na.	Mechanisms of controlling erosion/ Water harvesting (1)	Number of water harvesting (2)	Year of construction (3)		Type of erosion control/water harvesting (1)	Number of water harvesting (2)	Year of construction (3)

### Definitions and working page for page 12

**Q 9.1 and 9.3 :** What is required is to establish whether or not the household kept or raised the listed livestock during 2007/08 agricultural season (i.e. from October 2007 to September 2008). Also to establish the number of livestock as of 1st October 2008

**Keeping or raising livestock** is to keep livestock at home while providing the livestock with animal feeds and medication and other services. The livestock could be owned by the farmer or kept on behalf of relatives or neighbours .

#### Sections 9.1.1 to 9.1.7 Cattle

**Note:**

**Q 9.1 is for the actual number of cattle owned or kept by the household (as of 1st October 2008). This number does not include herds of cattle kept on behalf by relatives or neighbours; that is, the cattle outside the residential area of the household under survey.**

1. If the household keep mature fecund female cattle, it is expected that such a household will have calves which will be entered in question 9.1.6 or 9.1.7

#### Type of cattle (section 9.1.1 to 9.1.7)

**Bull:** Mature uncastrated male cattle used for breeding

**Cow:** Mature female cattle that has given birth at least once

**Ox:** Castrated male cattle used for farm work

**Steer:** Castrated male cattle used for meat

**Heifer:** Female cattle of 1 year up to the first calving

#### Section 9.3 Goat

**Note:**

**Question 9.3 is for the actual number of owned or raised by the household (as of 1st October 2008) This number does not include goats kept on behalf by relatives or neighbours, that is the goat outside the residential area of the household under survey.**

1. If the household has she goats, you would normally expect them to have kids

#### Type of Goat (Qs 9.3.1 to 9.3.5)

**Billy Goat (he-goat):** Mature Uncastrated male goat used for breeding

**Castrated goat:** Male goat that has been castrated

**She Goat:** Mature female goat over 9 months of age

<b>9.0 LIVESTOCK (LIVESTOCK AND FISH)</b>		Identification <input type="text"/>				
<b>9.1 CATTLE</b>		Did your household keep or raise cattle during 2007/08 agriculture year? Yes=1, No= 2 (If the answer is No proceed to Section 9.3)				
Number of cattle as of 1.10.2008		<input type="text"/>				
No.	Type of cattle	Number of indigenous cattle (2)	Number of improved cattle for meat (3) Dairy (4)	Total (5)		
9.1.1	Castrated bulls	<input type="text"/>	<input type="text"/>	<input type="text"/>		
9.1.2	uncastrated bulls	<input type="text"/>	<input type="text"/>	<input type="text"/>		
9.1.3	Cows	<input type="text"/>	<input type="text"/>	<input type="text"/>		
9.1.4	Steers	<input type="text"/>	<input type="text"/>	<input type="text"/>		
9.1.5	Heifer	<input type="text"/>	<input type="text"/>	<input type="text"/>		
9.1.6	Male calves	<input type="text"/>	<input type="text"/>	<input type="text"/>		
9.1.7	Female calves	<input type="text"/>	<input type="text"/>	<input type="text"/>		
Grand total				<input type="text"/>		
9.1.8 What main methods do you use to identify your cattle?		<input type="text"/>				
<b>Cattle identification methods</b> Iron stamp (chapa moto).....1 Throat.....2 Ear/tail cutting.....3 Colour.....4 Earrings.....5 Other .....8						
<b>9.2 Milk production: CATTLE</b>

### Definitions and working page for page 13

**Q 9.1 and 9.3 :** What is required is to establish whether or not the household kept or raised the listed livestock during 2007/08 agricultural season (i.e. from October 2007 to September 2008). Also to establish the number of livestock as of 1st October 2008

**Keeping or raising livestock** is to keep livestock at home while providing the livestock with animal feeds and medication and other services. The livestock could be owned by the farmer or kept on behalf of relatives or neighbours .

### Sections 9.4 Sheep

**Note:**

**Q 9.4 is for the actual number of sheep owned or kept by the household (as of 1st October 2008). This number does not include sheep kept on behalf by relatives or neighbours; that is, the sheep outside the residential area of the household under survey.**

1. If the household keep ewes, it is expected that such a household will have calves which will be entered in question 9.1.6 or 9.1.7

### Type of Sheep (Section 9.4.1 to 9.4.5)

**Ram:** Mature Uncastrated male sheept used for breeding

**Castrated sheep:** Male sheep that has been castrated

**Ewe:** Mature female sheep over 9 months of age

**Lamb:** Young sheep under 9 months of age.

### Section 9.5 Pigs

**Note:**

**Question 9.3 is for the actual number of pigs owned or raised by the household (as of 1st October 2008). This number does not include pigs kept on behalf by relatives or neighbours, that is the cattle outside the residential area of the household under survey. .**

1. If the household has she goats, you would normally expect them to have kids in column

### Type of Pigs (Qs 9.5.1 to 9.5.5)

**Boar:** Mature Uncastrated male pig used for breeding

**Sow:** Mature female pig that has given birth to at least one litter of pigs.

**Gilt:** Female pig of over 3 months up to the first farrowing

**Piglet:** Young pig less than 3 months of age

## Definitions and working page for page 15

## General definitions

**Fish farming:** Refers to the rearing/production of fish. It is different from fishing in that in fish farming the fish have to be reared. While in fishing, fishing nets or traps are used to catch fish from rivers, lakes and the sea; thus fishing should not be included in this section

I

## Question Specific Definitions (Q 9.9 )

Production unit number (Col 1): A production unit is a pond river/lake which is treated as a separate entity for the production of fish eg it may be by virtue of manageable size, maturity of fish, type of fish etc. eg. a farmer may have 3 fish ponds (each one is a separate production unit).

Frequency of stocking (Col . 5): What is the number of time the farmer puts new fingerlings into the pond each year.

Fingerlings: These are young immature fish used for stocking ponds.

**Sols: (Col 10 & 11)**

If no fish were sold enter "0" in column 10 and 11`

## Fish sold (Col.12)

Kama hakuna samaki waliouzwa jaza "0" katika safuwima 12

**Definitions and working page for page 16****10.0 Household poverty indicators****Number of rooms used for sleeping in the household (Q 10.1.4)**

Include sitting room, dining room, kitchen, etc if used for sleeping.

It also includes rooms outside the main dwelling

A room is defined as a space which is separate from the rest of the building by a permanent wall or division. A building / house that is not divided into rooms is considered to have one room.

**Household assets (Q 10.2):**

These assets must be functional. Do not include if broken.

**Access to drinking water (Q 10.4):**

If there is more than one source use the one, which the hh uses most frequently.

**Main source of hh cash income:(Q 10.7:**

Activity that provides the hh with the most cash during 2007/08 agricultural season.

Tanzania Agriculture Sample Census - 2007/08

**Average/maximum yields per area**

Use this table to compare the yields calculated in Sections 5.1, 5.2 and 5.3.

These stats are strictly to be used as a guide for the purpose of assisting to get the correct area and yields for each crop.

## Definitions and working page for page 3

## Question Specific Definitions:

Obtain answers to the following questions from the meeting between the enumerator and influential farmers in the village. Influential people can be Village Chairman, Village Government Executive Officer, Councillor, Ward Chairman, Extension Officer in the village or any other person in the village and who is well informed about village matters. It is important to not that these questions must be asked in groups (of more than one people) to obtain answers discussed and approved by many people.

## Definitions of some specific terms

**Access to community resources, Section 1.0**

**Community Resources:** Resources in which the hh members have no individual claim to and which are shared together by all the village

**Community Land:** The area official demarcated by the village as shared/public land.

**Squatting farmers Land:** Communal land where individual hhs make sole claim to (for crop farming or fenced livestock) without official rights to ownership.

**Available remaining Land:** Official area of communal land minus areas of squatting farmers.

**Government Land Reserve:** Area set aside by the government as national reserve

**Community tree planting scheme(Section 14.3)**

**Community Forest:** A forest planted on the communal land which is planted, replanted or spt planted by the members of the village.

**Plant Planting:** An area designated by the village for planting a block of trees.

**Spot Planted:** Replanting an area where selective logging has been carried out. A tree is planted to replace the one that has been cut.

**Indigeous Trees:** Trees that are native to Tanzania

**Exotic Trees:** Trees that are not native to Tanzania

**Non Government Organisation:** Is managed by people from outside the village and it normally covers more than one village/District/R region. Its function is to provide deveoopment assistance to the farmer and is free from direct government links.

**Village level organization:** is managed by members of the village. Its purpose is normally to access/provide development assistance to the village

## ACCESS TO COMMUNAL RESOURCES

1. ACCESS TO COMMUNITY RESOURCES									
1.1 Does the village set aside an area for communal resources e.g. forest, grazing, etc. (Yes=1, No=2) <input type="checkbox"/>									
(If the answer is no proceed to 1.2)									
Area of Community, Village, Ward resources		Area in acre							
1.1.1	Total area of communal land	<input type="text"/>			Official figures from the leader				
1.1.2	Area of squatting farmers in communal land	<input type="text"/>			Key informant (Leader/Extension officer etc.)				
1.1.3	Remaining available communal land	<input type="text"/>			Key informant (Leader/Extension officer etc.)				
1.1.4	Government reserve land	<input type="text"/>			Key informant (Leader/Extension officer etc.)				
1.2 UPATIKANAJI NA MATUMIZI YA MALIASILI ZA JUMUIYA/KILIJUSHEHIA									
Community Resources		Distance from the resource in Km -season		Main Use		Instructions on distance from the resource (Cols 2 and 3): Distance is estimated from the centre of the village.  If under 1 km 1, enter 0 If above 1 km 1 enter whole number, e.g. 1.5km= 2km, 1.25km= 1km  Main uses (Col. 4): Home or farm livestock consumption.....1 Sold to traders in the village.....2 Sold to the village market.....3 Sold to local wholesalers.....4 Sold to Big wholesalers.....5 Not available.....6			
		Dry (2) Rainy (3)							
1.2.1	Water for human consumption	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.2	Water for livestock	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.3	Communal grazing land	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.4	Communal firewood	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.5	Wood for charcoal burning	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.6	Wood for building poles	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.7	Forest for bee keeping (honey)	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.8	Hunting	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
1.2.9	Fishing	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>				
2.0 COMMUNITY PLANTED TREES									
2.1 Did your village have community planted trees during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>									
(If the answer is no proceed to Section 3.0)									
Details of the community tree planting scheme									
No.	Forest Area (acre)	Type of Planting	Type of Trees	Source of seeds/ Seedlings	Number of Years since the start of planting	Main uses 2007/08 agriculture year	Main uses of communal forest products		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)		
2.2	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>		
Type of planting (Col. 3): Plantation planting.....1 Spot planting.....2		Source of seedlings (Col. 5): Seeds collection and planting.....1 Village Nursery.....2 Department of Forestry.....3 Private Individuals.....4		Main Uses (Col. 7): Poles.....1 Wood.....2 Charcoal.....3 Firewood.....4 Other (Specify).....8		Main use of revenue (Col. 8): Village development fund.....1 Household use.....2 Household income.....3			
Type of trees (Col. 4): Indigenous trees.....1 Exotic tree.....2 Both types.....3									
3.0 Non governmental Organisation (NGOs) Contact					4.0 Community Based Organisation				
3.1 Did any NGO visit the village during 2007/08 agriculture year? (Yes=1, No=2) (If no proceed to Section 4) <input type="checkbox"/>					4.1 Did the village have any CBO during the 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>				
No.	Type of NGO	Visited Yes=1, No=2	Number of visits	Distance to the Office (km)	No.	Type of CBO	No=1, Yes=2		
3.2	Extension/ Research	<input type="text"/>	<input type="text"/>	<input type="text"/>	4.2	Extension/ Research	<input type="text"/>		
3.3	Service/ Input provision	<input type="text"/>	<input type="text"/>	<input type="text"/>	4.3	Service/ Input provision	<input type="text"/>		
3.4	Community Development	<input type="text"/>	<input type="text"/>	<input type="text"/>	4.4	Community Development	<input type="text"/>		
3.5	Other	<input type="text"/>	<input type="text"/>	<input type="text"/>	4.5	Other	<input type="text"/>		
5.1 Did the village have Field farm schools during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>					5.2 Did the village participate in any research on crops/ improved livestock during in the village during 2007/08 agriculture year? (Yes=1, No=2) <input type="checkbox"/>				
5.3 Did the village have local ironsmiths during 2007/08 agriculture year? (Yes=1, No=2) (If the answer is 2 proceed to q. 5.5) <input type="checkbox"/>					5.5 Did the village have any training centres on draft animals during 2007/08 agriculture year? (Yes=1, No=2) (If number 2 is the answer conclude the enumeration) <input type="checkbox"/>				
5.4 Number of local ironsmiths <input type="text"/>					5.6 Number of training centres for draft animals <input type="text"/>				

**Procedure:** Administer this from after completing all smallholder questionnaires for the village.

1. Copy the name of all crops from Sections 5.1, 5.2 and 5.3 grown in the village from smallholder questionnaires. This should also include livestock raised by the household from questions 9.1, 9.3, 9.4 and 9.5 and enter them in col na 1 of this form. Also see codes for livestock below.
2. Enter price estimates per kg in col 5 and 6.

**Quantity**  
(Col.5)

Kg.....1  
Number.....2  
Litre.....3  
A portion/piece 1.4
