Natural park management Environmental Management System (EMS)

*The first European
protected area to have
received EMAS registration*

Organization activities

- Scientific research and environmental education
- Management, use and maintenance
- Territory control
- Administration
- Tourist fruition
- Refuge management
- Pastoral and forestry activities
- Fishing
- Dam management
- Telecommunication and electrical equipment management
- Shipyard management
- Seed forest management
- Environmental monitoring

Environmental aspects

- Emissions into the air
- Discharges into water
- Waste production and management
- Use and contamination of land
- Use of natural resources and raw materials (water, electricity, fuels, etc.)
- Local issues (noise, odour, hazardous substances, visual appearance, inquinamento electromagnetic pollution, etc.)
- Transport issues
- Risk of environmental accidents and impacts arising as consequences of emergency situations
- Effects on biodiversity

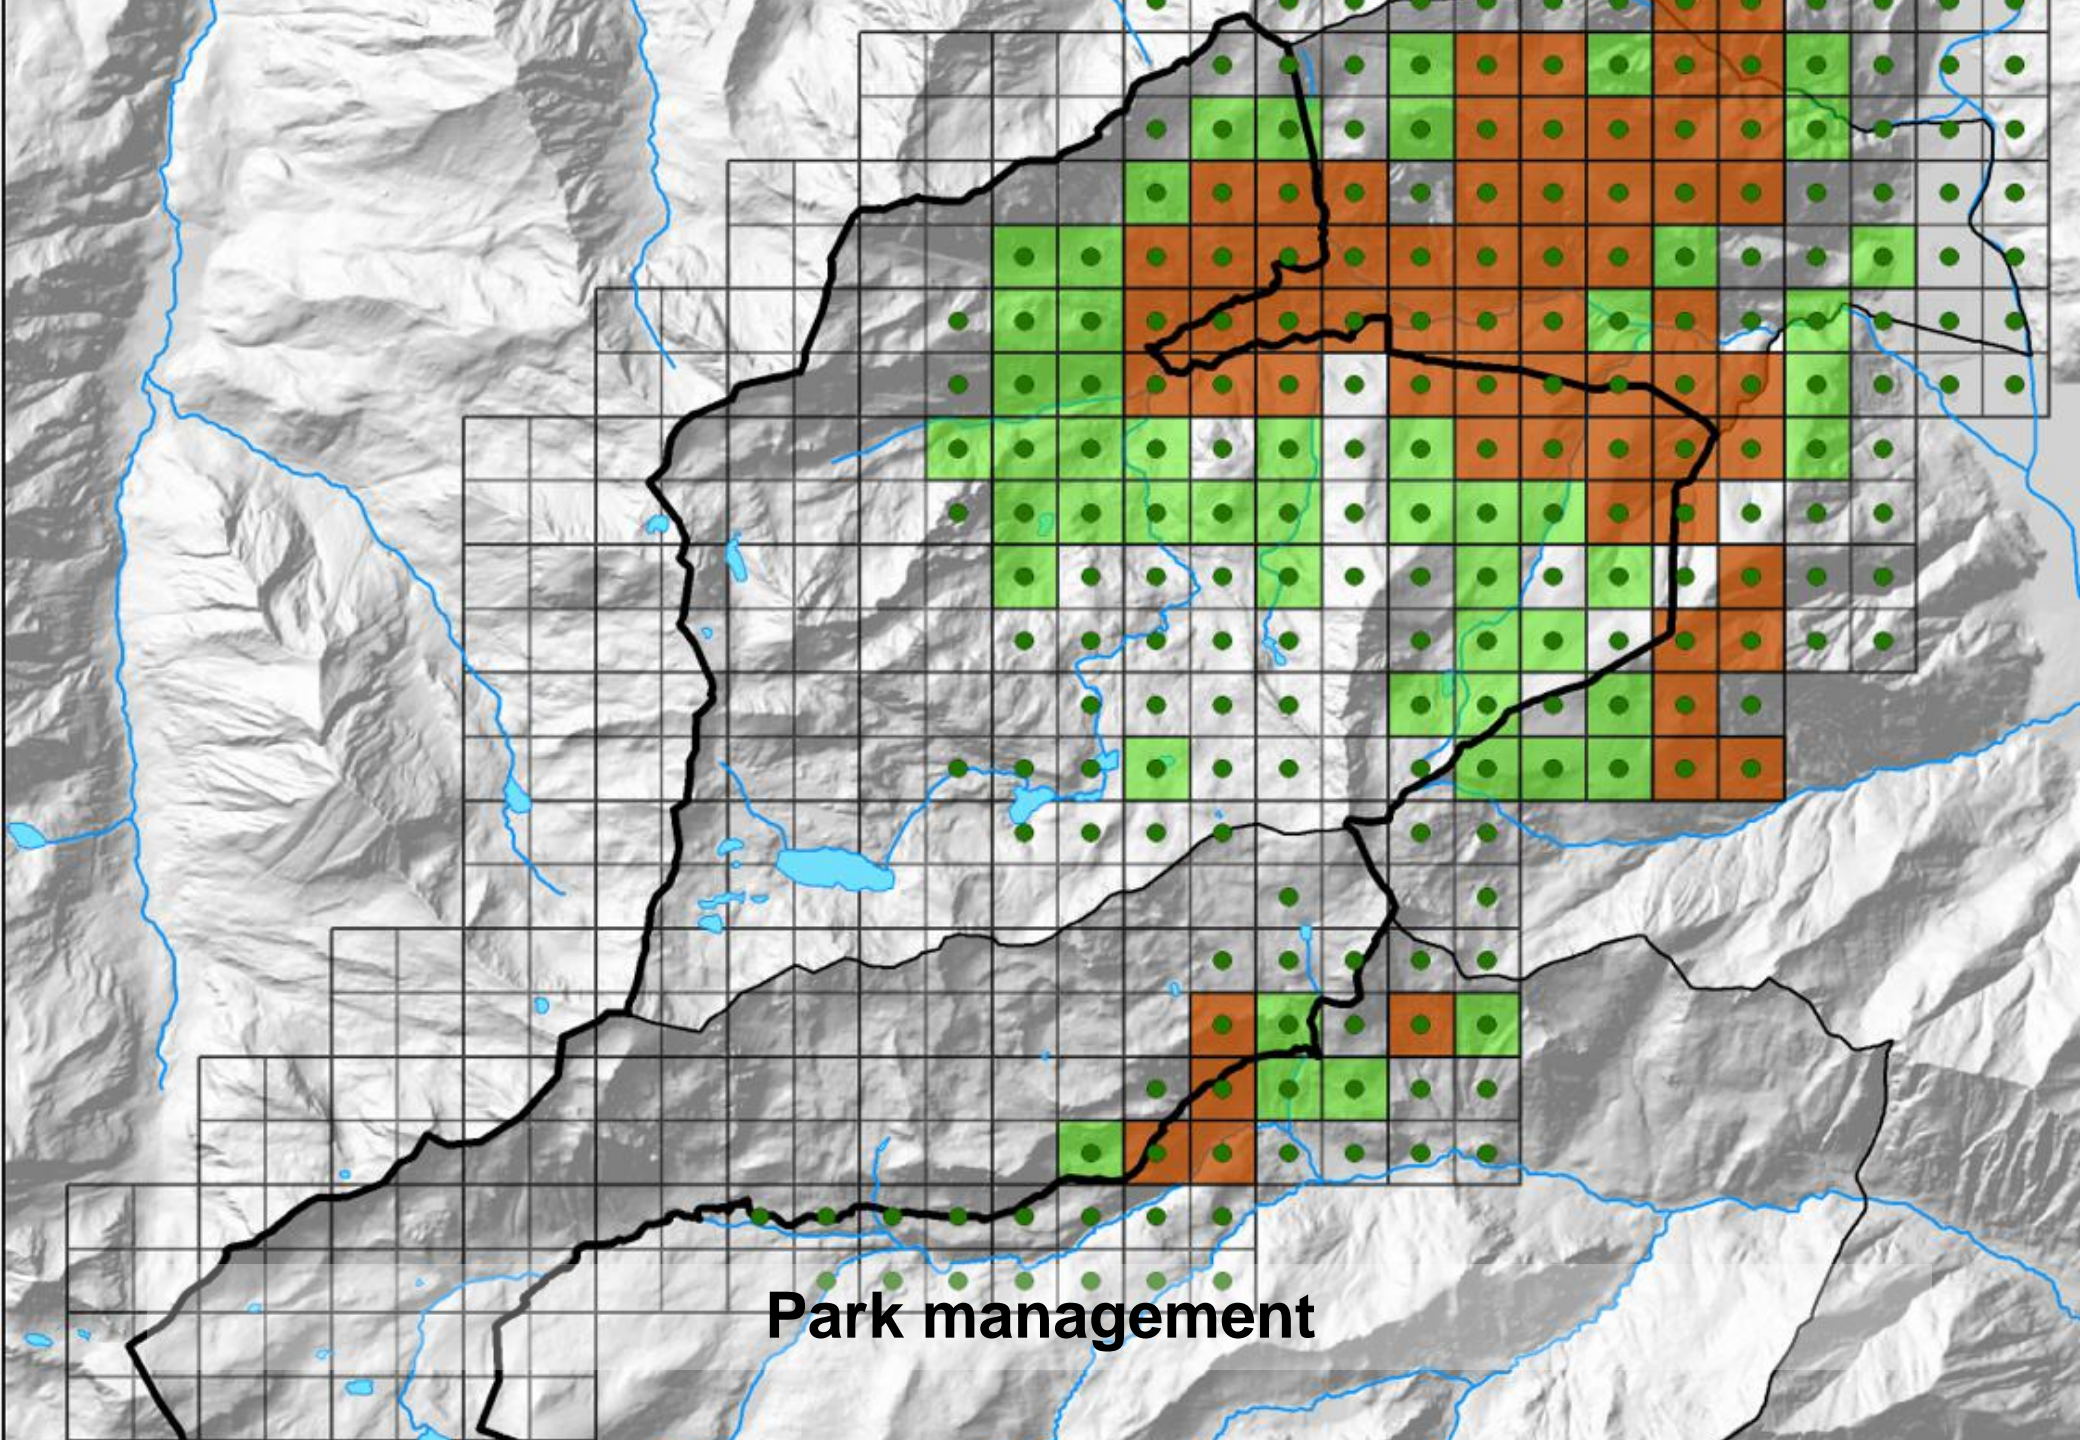

Biodiversity protection: more than 3.500 organisms found in the park (first regional record for 125 animal species, 11 of them not previously recorded in Italy)

Park management

A museum exhibit featuring a large, hollowed-out log section. The log is cut into three horizontal sections. The middle section is a flat board with a large, vertically oriented, oval-shaped hole. This hole is divided into two chambers. The lower chamber contains three white eggs. The upper chamber is empty. To the right of the log, a taxidermy specimen of a black woodpecker with a red crest is perched on the log, looking towards the hole. The background is a light-colored wall with some informational text and a window. The floor is made of light-colored tiles.

Park management

Programme Intereg IIIA ALCOTRA
France-Italie (Alpes) 2000-2006

Vi invitiamo al **rispetto**
della **fauna alpina!**

L'inverno è la stagione più critica
per gli animali delle Alpi

- > il cibo è scarso
- > il freddo determina un elevato consumo energetico
- > i luoghi adatti all'alimentazione e al riposo sono pochi

Il disturbo ripetuto
causato dalla presenza
dell'uomo può avere
conseguenze negative:

- > aumento innaturale della mortalità da predazione
- > deterioramento delle condizioni fisiche e minore successo riproduttivo
- > morte per inedia

Attorno
alle piste
di sci di
Champorcher
vivono

pernice bianca

fagiano di monte

coturnice

stambecco

camoscio

lepre variabile

rispettiamoli
evitando di
uscire dalle
piste battute!
