GLOBAL SYMPOSIUM ON SOIL BIODIVERSITY | 19-22 April 2021

Biodiversity strategy for 2030 - concrete actions

The EU's biodiversity strategy for 2030 is a comprehensive, ambitious and long-term plan to protect nature and reverse the degradation of ecosystems.

SUSTAINABLE DEVELOPMENT GOALS

1 NO POVERTY	2 ZERO HUNGER	3 GOOD HEALTH AND WELL-BEING	4 QUALITY EDUCATION	5 GENDER EQUALITY	6 CLEAN WATER AND SANITATION
7 AFFORDABLE AND CLEAN ENERGY	8 DECENT WORK AND ECONOMIC GROWTH	9 INDUSTRY, INNOVATION AND INFRASTRUCTURE	10 REDUCED INEQUALITIES	11 SUSTAINABLE CITIES AND COMMUNITIES	12 RESPONSIBLE CONSUMPTION AND PRODUCTION
13 CLIMATE ACTION	14 LIFE BELOW WATER	15 LIFE ON LAND	16 PEACE, JUSTICE AND STRONG INSTITUTIONS	17 PARTNERSHIPS FOR THE GOALS	SUSTAINABLE DEVELOPMENT GOALS

THE 17 GOALS > ACTION > NEWS > RESOURCES > BUSINESS > SCHOOLS > *

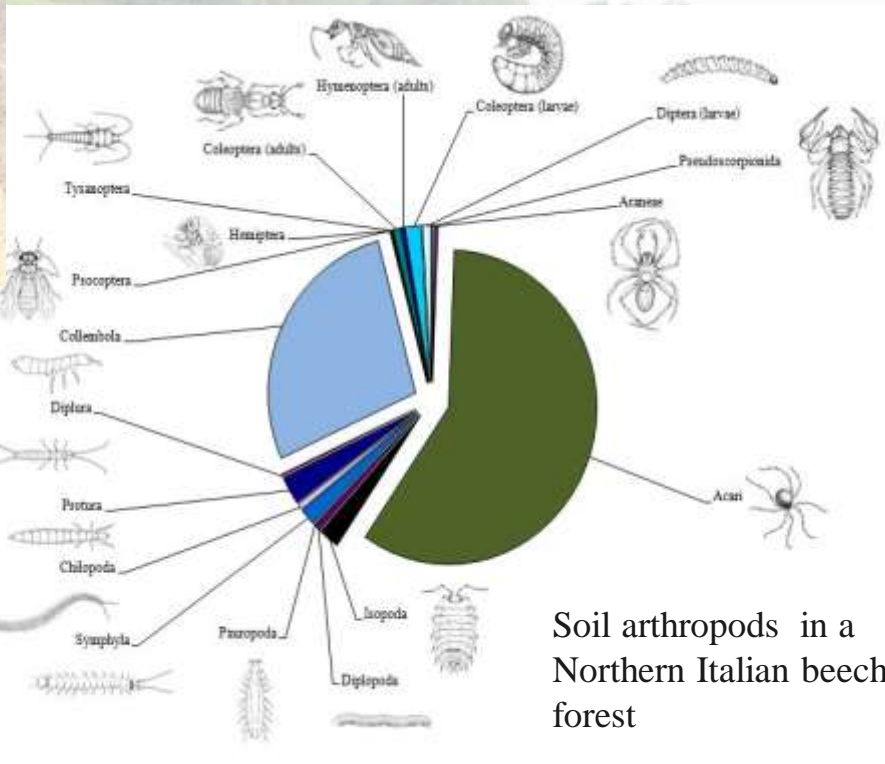

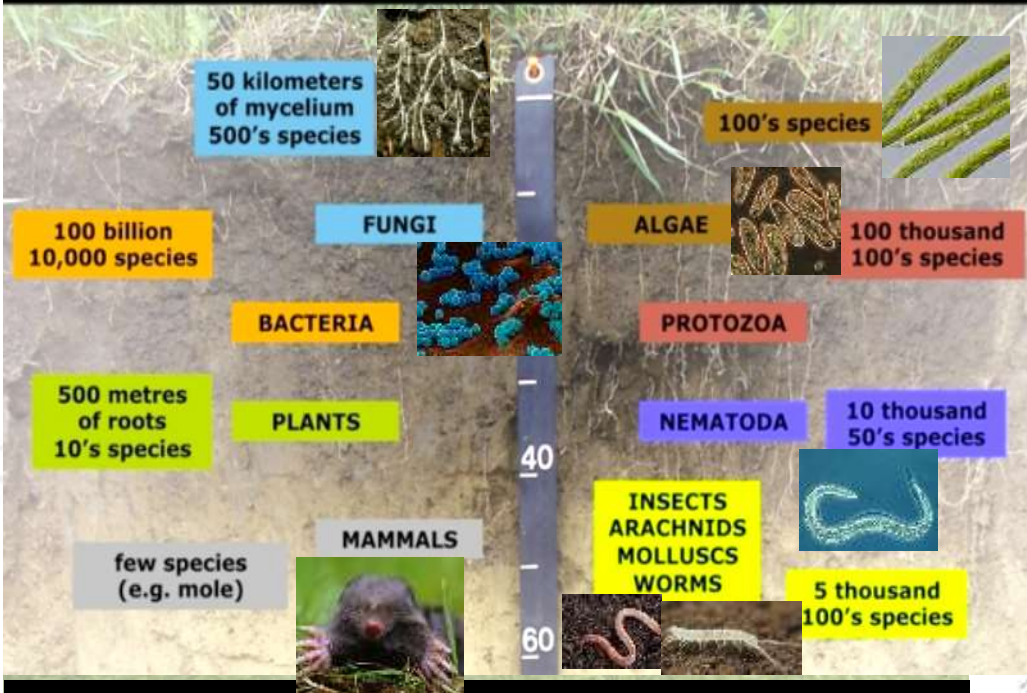

15 LIFE ON LAND

Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.

KEEP SOIL ALIVE
PROTECT SOIL
BIODIVERSITY

SOIL BIODIVERSITY IN NUMBERS

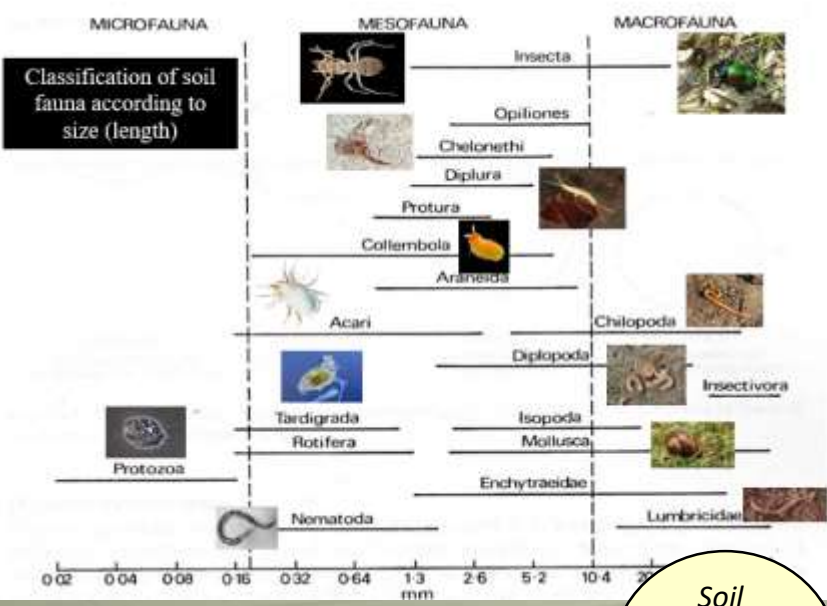

Soil arthropods in a Northern Italian beech forest

https://esdac.jrc.ec.europa.eu/themes/soil-biodiversity_mod

Not only the number of distinct species (richness) and their proportional abundance (evenness) present in a system but may be extended to encompass phenotypic (expressed), functional, structural or trophic diversity.

The distribution of soil fauna is driven by several factors

- Vegetation cover
- Rhizosphere
- Organic matter content
- Soil composition
- Soil porosity
- pH
- Temperature
- Water content
- Prey/ predators
- Contamination/degradation

RBCs root border cells MF mycorrhizal fungi SF saprophytic fungi

From: Bonkowski M., Villenave C., Griffiths B., 2009. Rhizosphere fauna: the functional and structural diversity of intimate interactions of soil fauna with plant roots. *Plant Soil* 321-213-233.

AGRICULTURAL ECOSYSTEMS

IMPACT

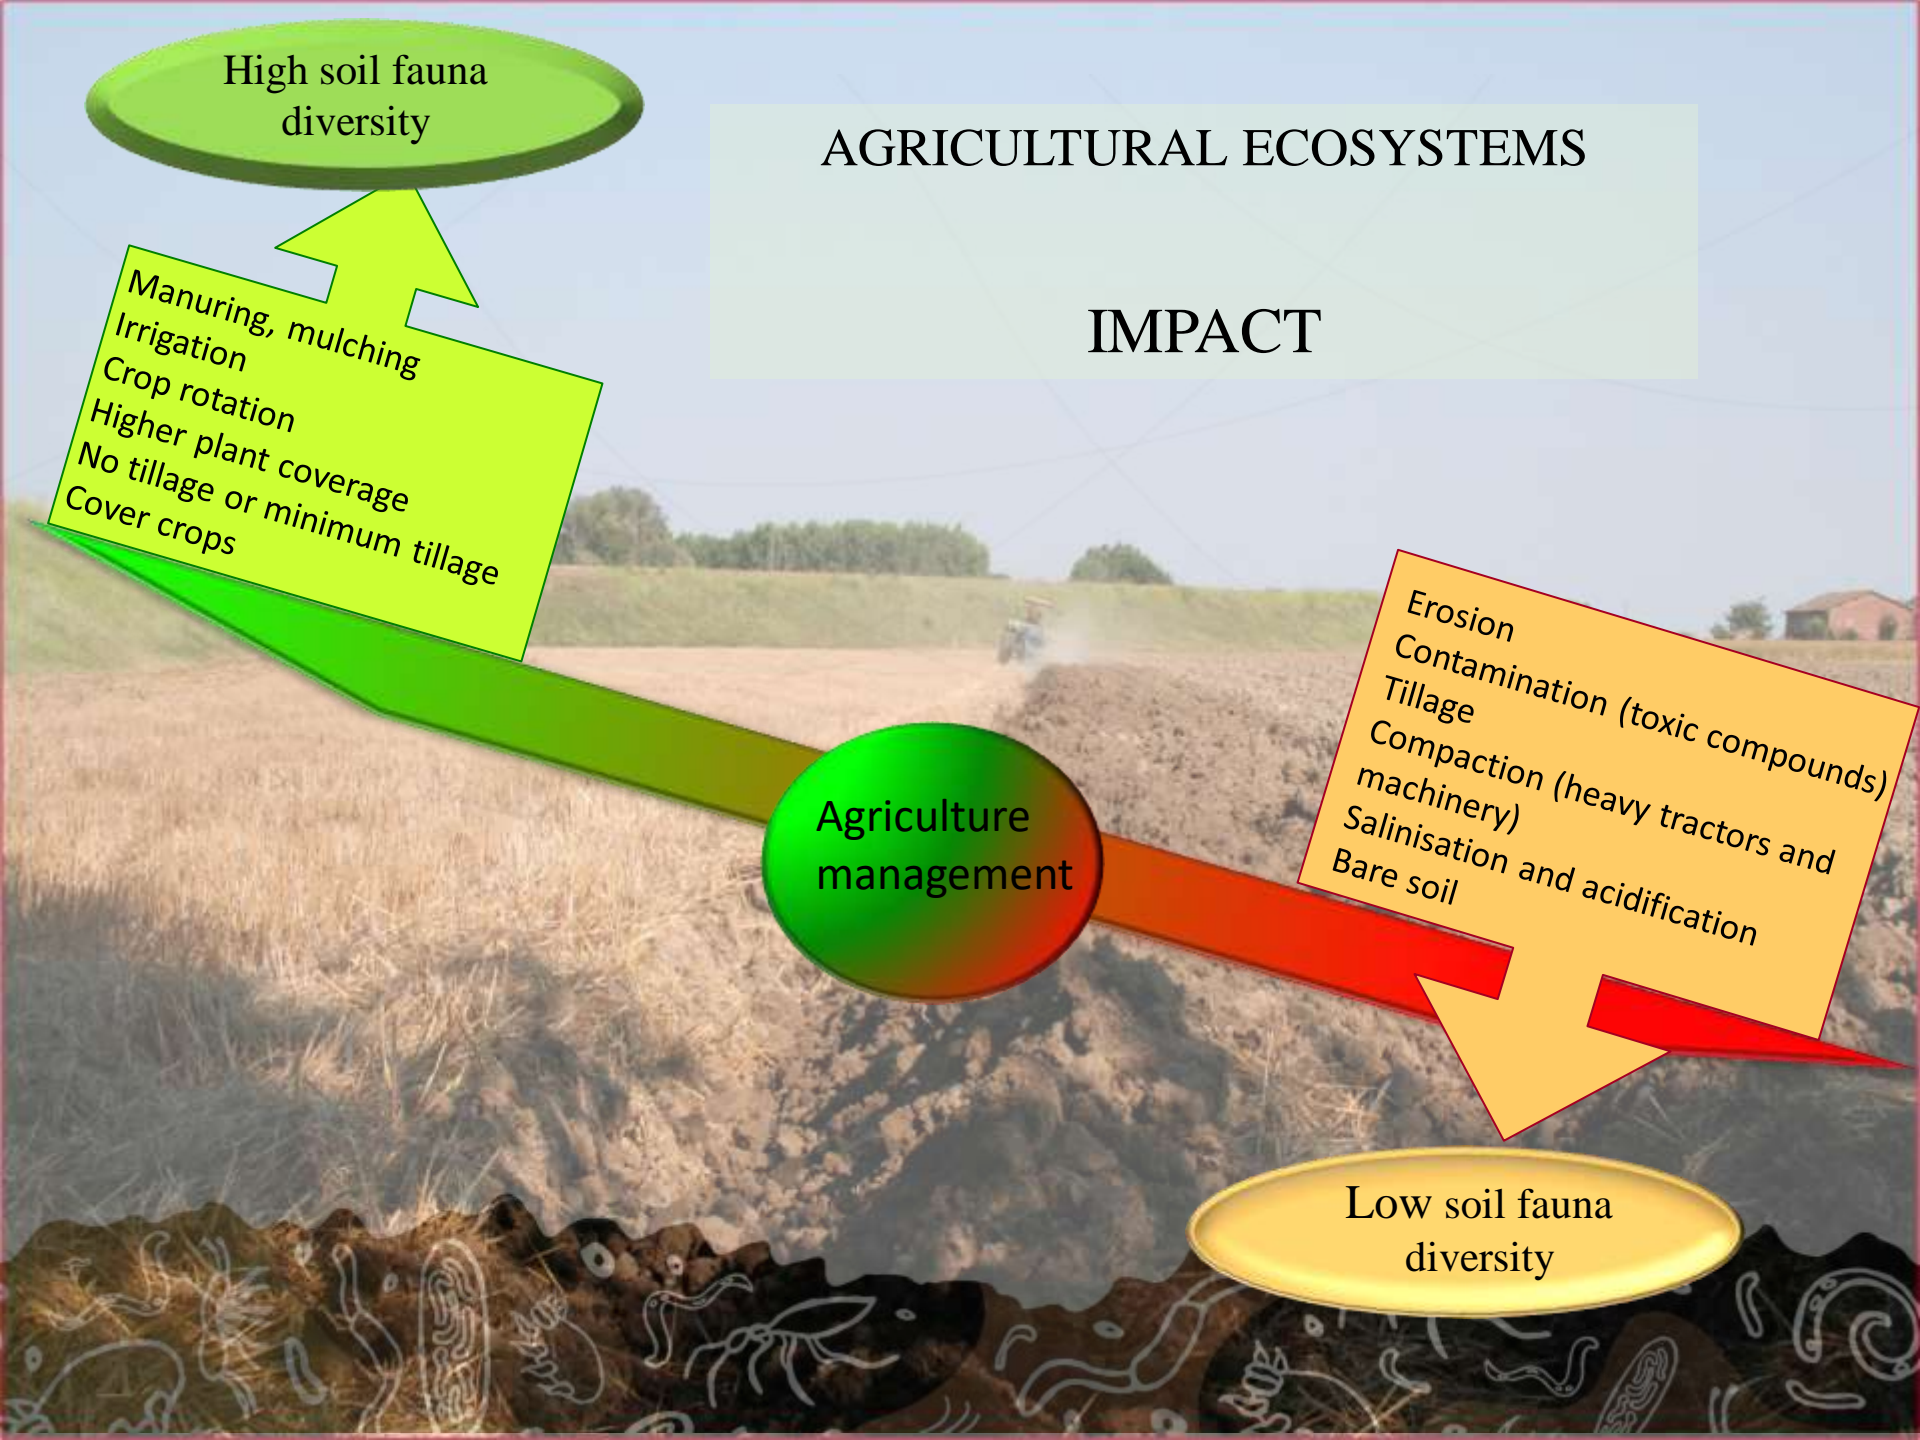

High soil fauna diversity

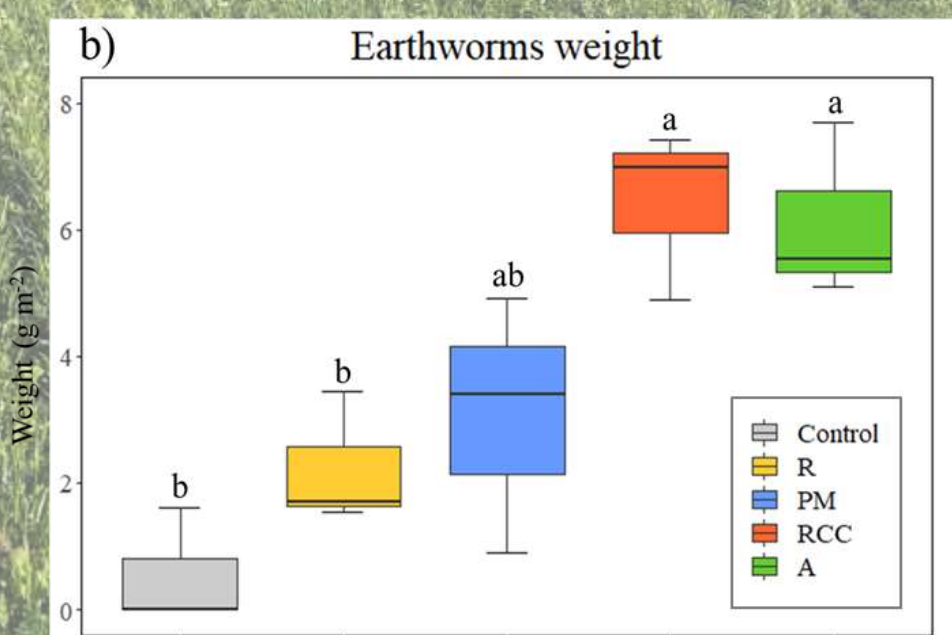

Manuring, mulching
Irrigation
Crop rotation
Higher plant coverage
No tillage or minimum tillage
Cover crops

Agriculture management

Erosion
Contamination (toxic compounds)
Tillage
Compaction (heavy tractors and machinery)
Salinisation and acidification
Bare soil

Low soil fauna diversity

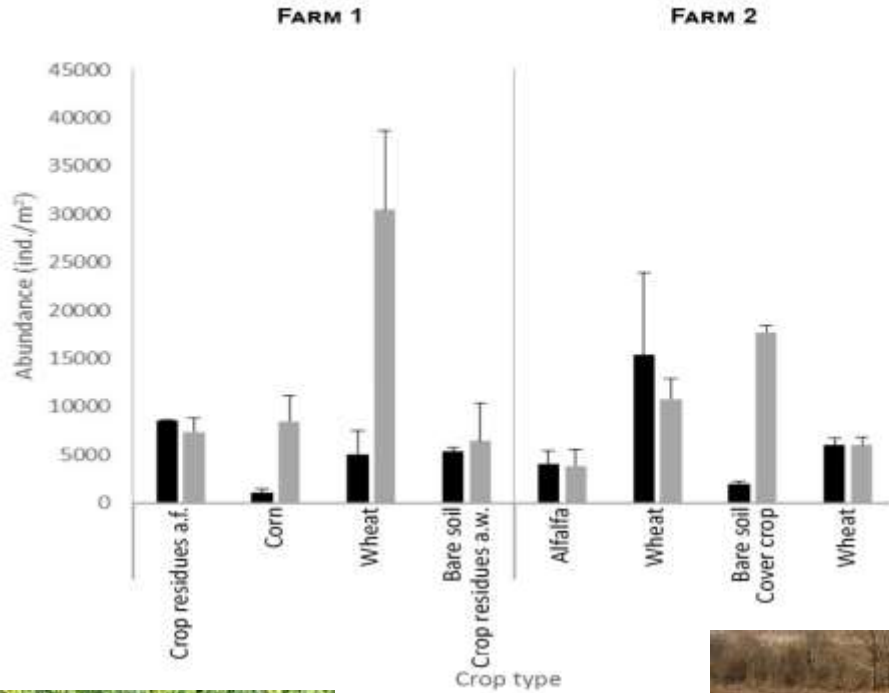

Control; rye (R); phacelia + white mustard (PM); Italian ryegrass + crimson clover + Persian clover (RCC); alfalfa (A) as permanent cover crop

From: Fiorini A., Remelli S., Boselli R., Mantovi F., Ardenti F., Trevisan M., Menta C., Tabaglio V. Submitted – Photos by Tabaglio V.

Total arthropod abundance (ind./m²)

■ CNV ■ CNS

Number of groups

■ CNV ■ CNS

From: Menta C., Conti F.D., Lozano-Fondón C., Staffilani F., Remelli S., 2020. Soil Arthropod Responses in Agroecosystem: Implications of Different Management and Cropping Systems. [Agronomy](#), 10(7),982.

Acari abundance (ind./m²)

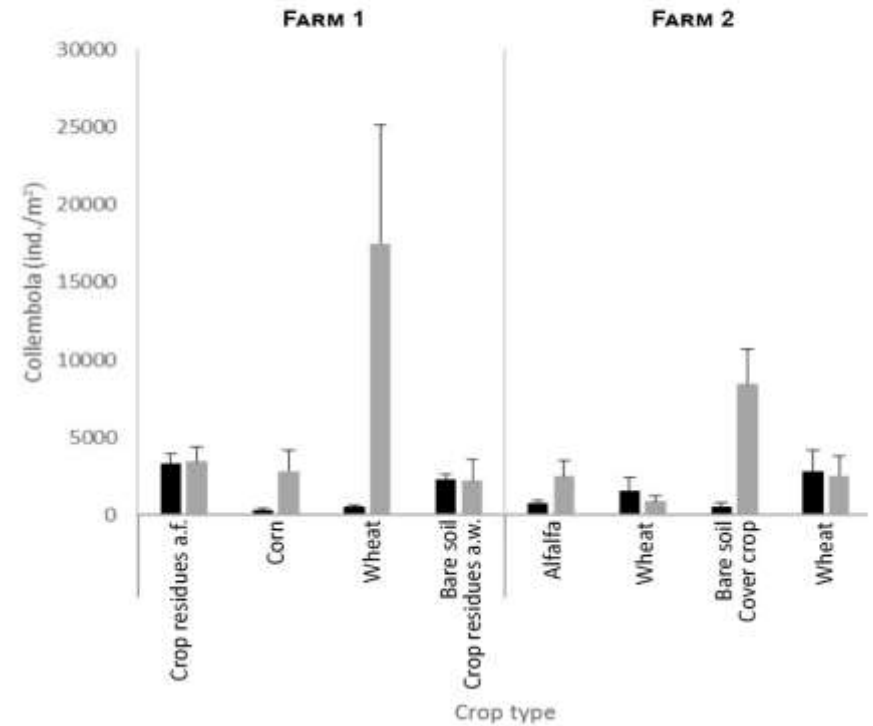

■ CNV ■ CNS

■ CNV: Conventional agriculture (tillage)
 ■ CNS: Conservation agriculture (no-till, cover crops)

Collembola abundance (ind./m²)

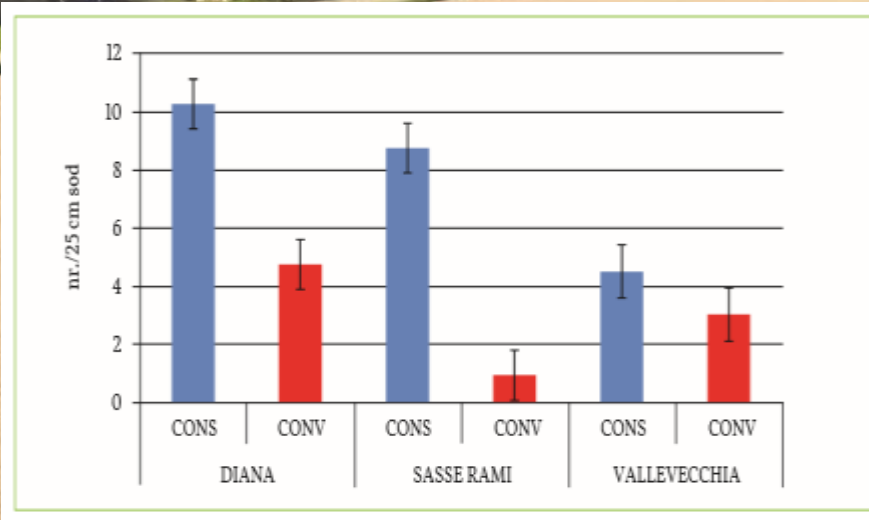

■ CNV ■ CNS

From: Menta C., Conti F.D., Lozano-Fondón C., Staffilani F., Remelli S., 2020. Soil Arthropod Responses in Agroecosystem: Implications of Different Management and Cropping Systems. [Agronomy](#), 10(7),982.

Conservation agriculture: no-till, cover crops (CONS) vs Conventional agriculture: tillage (CONV)

Earthworm density for the different managements on three farms (average for the two years 2012-2014).

Earthworm density for the different managements in the years of monitoring (2012-2014) for the different earthworm forms and stages (average of the three farms).

Morphological adaptations to soil

- Small dimension
- Reduction of thickness of the exoskeleton and pigmentation
- Reduction or loss of eyes
- Reduced and more compact antennas and legs
- Reduction or loss of flying, jumping or running structures
- Reduced water-retention capacity

Adaptation to soil makes soil animals unable to leave it

They are **more sensitive** to the change of physical and chemical parameters caused by natural or human activities.

QBS-ar index

Biological Quality Index based on Soil micro-arthropod community

On soil surface

From: <https://petehillmansnaturephotography.files.wordpress.com/2017/07/orchesella-villosa.jpg>

No solar radiation

Below soil surface

Eco-morphologic indices (EMIs) of edaphic microarthropod groups^a

Group	EMI score
Protura	20
Diplura	20
Collembola	1-20
Microcoryphia	10
Zygentomata	10
Dermaptera	1
Orthoptera	1-20
Embioptera	10
Blattaria	5
Psocoptera	1
Hemiptera	1-10
Thysanoptera	1
Coleoptera	1-20
Hymenoptera	1-5
Diptera (larvae)	10
Other holometabolous insects (larvae)	10
Other holometabolous insects (adults)	1
Acari	20
Araneae	1-5
Opiliones	10
Palpigradi	20
Pseudoscorpiones	20
Isopoda	10
Chilopoda	10-20
Diplopoda	10-20
Paupoda	20
Symphyla	20

No adaptation

EMI = 1

Intermediate adaptation

EMI = 5-10

Total adaptation

EMI = 20

In relation to the degree of soil adaptation

EMI between 1-5/1-10/1-20

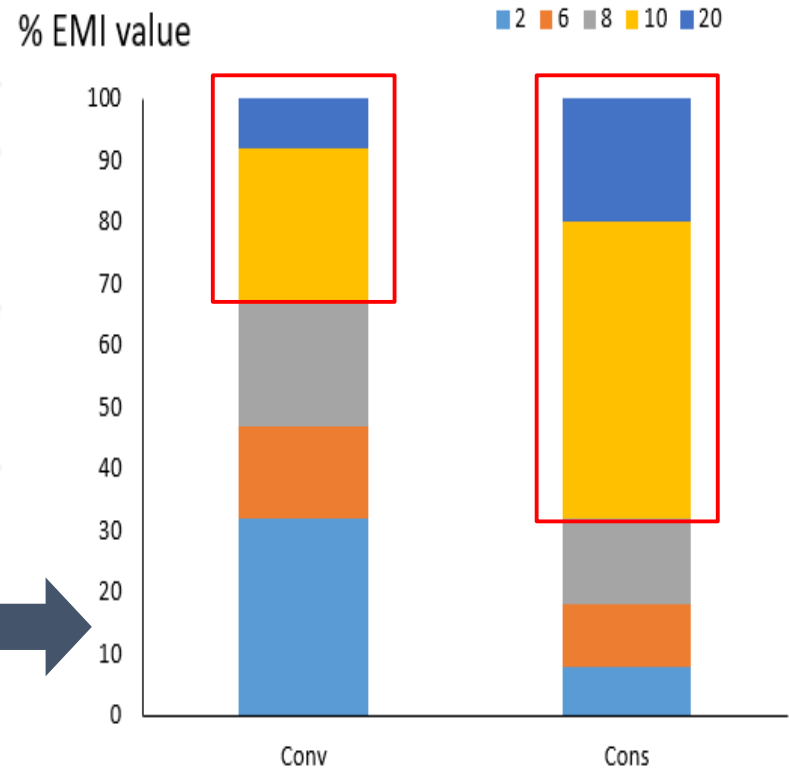

QBS-ar is the sum of the maximum EMI score for each group

FARM 1

CNV: Conventional agriculture (tillage)
 CNS: Conservation agriculture (no-till, cover crops)

From: Menta C., Conti F.D., Lozano-Fondón C., Staffilani F., Remelli S., 2020. Soil Arthropod Responses in Agroecosystem: Implications of Different Management and Cropping Systems. [Agronomy](#), 10(7),982.

QBS-ar

Control; rye (R); phacelia + white mustard (PM); Italian ryegrass + crimson clover + Persian clover (RCC); alfalfa (A) as permanent cover crop

From: Fiorini A., Remelli S., Boselli R., Mantovi P., Ardeni F., Trevisan M., Menta C., Tabaglio V. *Submitted*

From: Lakshmi G., Beggi F., Menta C., Kumar N.K., Jayesh P., 2021. Dynamics of soil microarthropod populations affected by a combination of extreme climatic events in tropical home gardens of Kerala, India. *Pedobiologia*

498 data collected from 1993 to 2015

(from 40 papers published)

Considering land uses, 8 groups were identified:

Agriculture lands (several crops, till and no-tillage, organic, conventional)

Woods and forests (several species),
Mediterranean maquis, bushes

Plant **remediation**, **restored** pit mine, peri-urban uncultivated areas, etc.

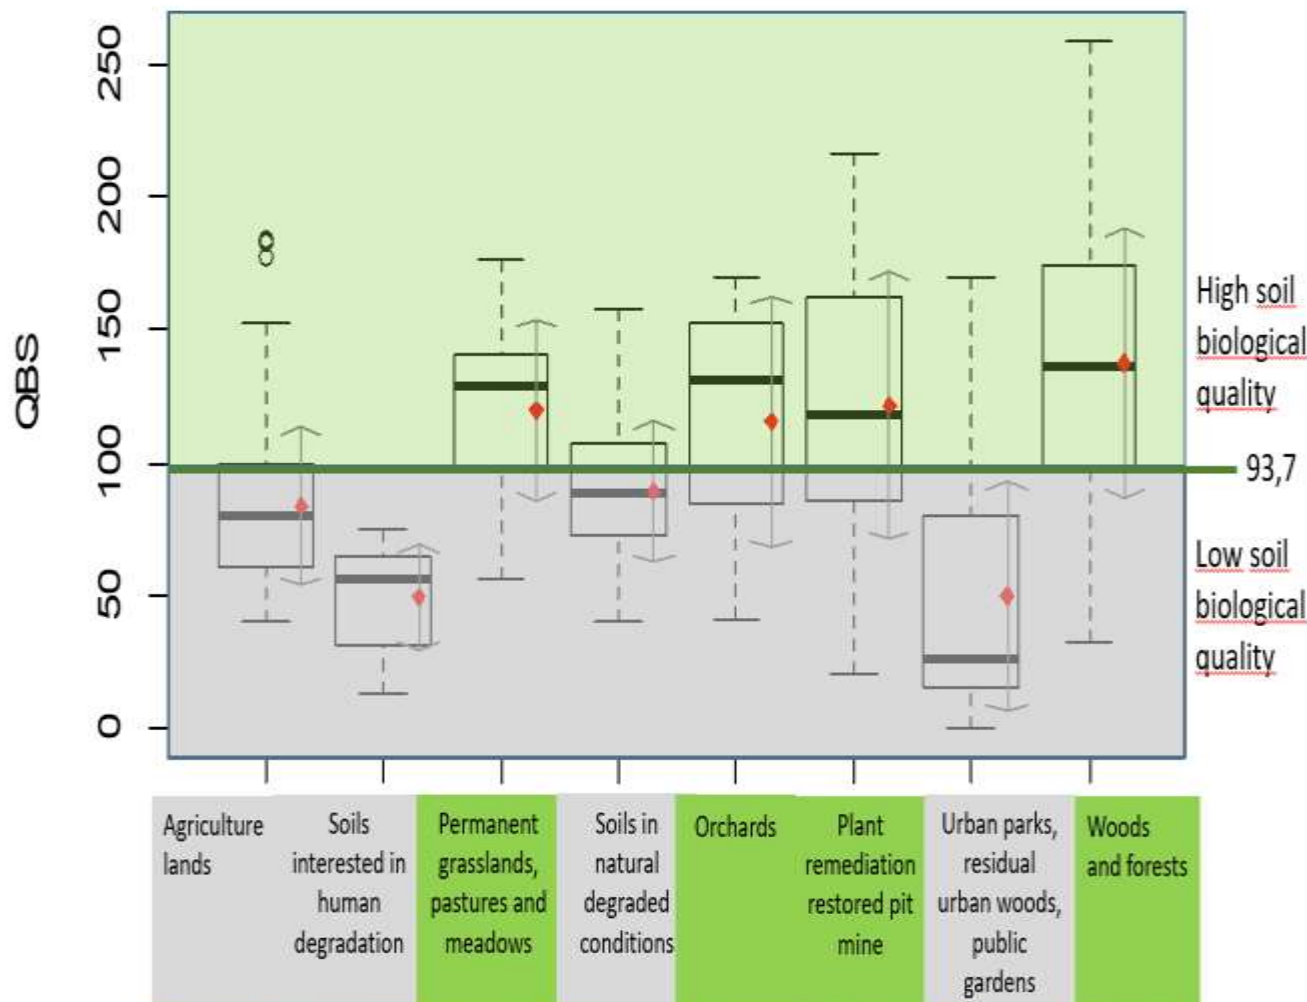

Soils in **natural degraded** conditions (e.g. serpentine soils, soil in the brûlé etc.)

Permanent **grasslands**, pastures and meadows

Orchards

Urban parks, residual urban woods, public gardens, botanical gardens, home gardens

Soils affected by human **degradation**.
