

Table 9. Feeding of live feed for striped catfish at different stages of its life (applied in pond condition)

Early fry

Live food type/ source	Methods ¹	Frequency (No./day)	Rate (% BW)
<i>Moina</i> ² Collected from wild	Live feeding	Introduced 1–2 days before stocking fish larvae	2–3 kg per 1 000 m ² pond

¹ *Moina* collected from wild were treated with NaCl at 20 ppt or 3–4 mg KMnO₄/liter or formalin at 50 ppm to eliminate pathogens.

They were still alive and actively moving after treatment.

² Supplementing feeding with soybean meal and soybean milk in the form of emulsion or with commercial feeds.
