

### Classification proposed for various aquaculture and capture fisheries practices

| PRODUCTION FROM:   | DESIGNATION |                   |             |
|--|-------------|-------------------|-------------|
|  | AQUACULTURE | CAPTURE FISHERIES |             |
|  |             | Enhanced          | Traditional |
| <b>Hatcheries</b>  | •           |                   |             |
| <b>Managed grow-out sites for organisms reared from fry, spat and juveniles:</b>                                       |             |                   |             |
| - Ponds  | •           |                   |             |
| - Tanks  | •           |                   |             |
| - Raceways   | •           |                   |             |
| - Cages  | •           |                   |             |
| - Pens   | •           |                   |             |
| - Barrages   | •           |                   |             |
| - Integrated vallicultura production   | •           |                   |             |
| - Private, tidal ponds (tambaks)   | •           |                   |             |
| - Poles, ropes and net bags for molluscs   | •           |                   |             |
| - Aquatic plants from planted or suspended facilities  | •           |                   |             |
| <b>Managed sites for on-growing or fattening of organisms of marketable size (e.g. tuna, cod) captured in the wild</b> | [ • ]       |                   | •           |
| <b>Stocked lakes, dams, reservoirs and rivers:</b>   |             |                   |             |
| - with additional enhancement (predator control, engineering and/or fertilization etc.)                                |             | •                 |             |
| - modifications, with exploitation rights  |             | •                 |             |
| - no other intervention, without exploitation rights   |             | •                 |             |
| <b>Unstocked lakes, dams, reservoirs and rivers:</b>   |             |                   |             |
| - with enhancement (fertilization and/or predator control habitat modification), exploitation with or without rights   |             | •                 |             |
| <b>Rice-fish practice:</b>   |             |                   |             |
| - from stocked rice-paddy  | •           |                   |             |
| - from unstocked rice-paddy  |             |                   | •           |
| <b>Brush parks:</b>  |             |                   |             |
| - managed over time and with other enhancement rights  |             | •                 |             |
| - harvested on an install-and-harvest basis  |             |                   | •           |
| <b>Fish aggregating devices</b>  |             |                   | •           |
| <b>Holding facilities for live captured organisms of marketable size held for a few months (e.g. lobsters, crabs)</b>  |             |                   | •           |
| <b>Ranching</b>  |             | •                 |             |
| <b>Artificial reefs with or without exploitation rights</b>  |             | •                 |             |
| <b>Recreational fisheries:</b>   |             |                   |             |
| - privately owned recreational riverine fisheries  |             |                   | •           |
| - public water bodies  |             |                   | •           |
| <b>Open access waters with or without exploitation rights</b>  |             |                   | •           |

[ • ] Only incremental growth in captivity
